Chapter 1

CMSIS Cortex-M4

This documentation describes the CMSIS Cortex-M Core Peripheral Access Layer. It consists of:

- Cortex-M Core Register Definitions
- Cortex-M functions
- Cortex-M instructions
- Cortex-M SIMD instructions

The CMSIS Cortex-M4 Core Peripheral Access Layer contains C and assembly functions that ease access to the Cortex-M Core

Chapter 2

Module Index

2.1 Modules

Here is a list of all modules:

Chapter 3

Data Structure Index

3.1 Data Structures

Here are the data structures with brief descriptions:

Chapter 4

File Index

4.1 File List

Here is a list of all documented files with brief descriptions:

Chapter 5

Module Documentation

5.1 CMSIS MISRA-C:2004 Compliance Exceptions

CMSIS violates following MISRA-C2004 Rules:

- Violates MISRA 2004 Required Rule 8.5, object/function definition in header file.
  Function definitions in header files are used to allow 'inlining'.
- Violates MISRA 2004 Required Rule 18.4, declaration of union type or object of union type: '{...}'.
  Unions are used for effective representation of core registers.
- Violates MISRA 2004 Advisory Rule 19.7, Function-like macro defined.
  Function-like macros are used to allow more efficient code.

5.2 CMSIS Core Definitions

Modules

- CMSIS Core Register
- CMSIS Core

Macros

- #define __CM4_CMSIS_VERSION_MAIN (0x02)
- #define __CM4_CMSIS_VERSION_SUB (0x10)
- #define __CM4_CMSIS_VERSION ((__CM4_CMSIS_VERSION_MAIN << 16) | __CM4_CMSIS_VERSION_SUB)
- #define __CORTEX_M (0x04)
- #define **__CORE_CM4_H_DEPENDANT**
- #define __I volatile const
- #define __O volatile
- #define __IO volatile

5.2.1 Detailed Description

This file defines all structures and symbols for CMSIS core:

- CMSIS version number
- Cortex-M core
- Cortex-M core Revision Number

5.2.2 Macro Definition Documentation

5.2.2.1 __CM4_CMSIS_VERSION

```
#define __CM4_CMSIS_VERSION ((__CM4_CMSIS_VERSION_MAIN << 16) | __CM4_CMSIS_VERSION_SUB)
```

CMSIS HAL version number

5.2.2.2 __CM4_CMSIS_VERSION_MAIN

```
#define __CM4_CMSIS_VERSION_MAIN (0x02)
```

[31:16] CMSIS HAL main version

5.2.2.3 __CM4_CMSIS_VERSION_SUB

```
#define __CM4_CMSIS_VERSION_SUB (0x10)
```

[15:0] CMSIS HAL sub version

5.2.2.4 __CORTEX_M

```
#define __CORTEX_M (0x04)
```

Cortex core
__FPU_USED to be checked prior to making use of FPU specific registers and functions standard types definitions
Core Instruction Access
Core Function Access
Compiler specific SIMD Intrinsics

5.2.2.5 __I

```
#define __I volatile const
```

defines 'read only' permissions

5.2.2.6 __IO

```
#define __IO volatile
```

defines 'read / write' permissions

5.2.2.7 __O

```
#define __O volatile
```

defines 'write only' permissions

5.3 CMSIS Core Register

Modules

- CMSIS Core

- #define SCS_BASE (0xE000E000UL)
- #define ITM_BASE (0xE0000000UL)
- #define CoreDebug_BASE (0xE000EDF0UL)
- #define SysTick_BASE (SCS_BASE + 0x0010UL)
- #define NVIC_BASE (SCS_BASE + 0x0100UL)
- #define SCB_BASE (SCS_BASE + 0x0D00UL)
- #define SCnSCB ((SCnSCB_Type *) SCS_BASE)
- #define SCB ((SCB_Type *) SCB_BASE)
- #define SysTick ((SysTick_Type *) SysTick_BASE)
- #define NVIC ((NVIC_Type *) NVIC_BASE)
- #define ITM ((ITM_Type *) ITM_BASE)
- #define CoreDebug ((CoreDebug_Type *) CoreDebug_BASE)
- #define ITM_RXBUFFER_EMPTY 0x5AA55AA5
- volatile int32_t ITM_RxBuffer

5.3.1 Detailed Description

Core Register contain:

- Core Register
- Core NVIC Register
- Core SCB Register
- Core SysTick Register
- Core Debug Register
- Core MPU Register
- Core FPU Register

5.3.2 Macro Definition Documentation

5.3.2.1 CoreDebug

```
#define CoreDebug ((CoreDebug_Type *) CoreDebug_BASE)
```

Core Debug configuration struct

5.3.2.2 CoreDebug_BASE

```
#define CoreDebug_BASE (0xE000EDF0UL)
```

Core Debug Base Address

5.3.2.3 ITM

```
#define ITM ((ITM_Type *) ITM_BASE )
```

ITM configuration struct

5.3.2.4 ITM_BASE

```
#define ITM_BASE (0xE0000000UL)
```

ITM Base Address

5.3.2.5 ITM_RXBUFFER_EMPTY

```
#define ITM_RXBUFFER_EMPTY 0x5AA55AA5
```

value identifying ITM_RxBuffer is ready for next character

5.3.2.6 NVIC

```
#define NVIC ((NVIC_Type *) NVIC_BASE )
```

NVIC configuration struct

5.3.2.7 NVIC_BASE

```
#define NVIC_BASE (SCS_BASE + 0x0100UL)
```

NVIC Base Address

5.3.2.8 SCB

```
#define SCB ((SCB_Type *) SCB_BASE )
```

SCB configuration struct

5.3.2.9 SCB_BASE

```
#define SCB_BASE (SCS_BASE + 0x0D00UL)
```

System Control Block Base Address

5.3.2.10 SCnSCB

```
#define SCnSCB ((SCnSCB_Type *) SCS_BASE )
```

System control Register not in SCB

5.3.2.11 SCS_BASE

```
#define SCS_BASE (0xE000E000UL)
```

System Control Space Base Address

5.3.2.12 SysTick

```
#define SysTick ((SysTick_Type *) SysTick_BASE )
```

SysTick configuration struct

5.3.2.13 SysTick_BASE

```
#define SysTick_BASE (SCS_BASE + 0x0010UL)
```

SysTick Base Address

5.3.3 Variable Documentation

5.3.3.1 ITM_RxBuffer

```
volatile int32_t ITM_RxBuffer  [extern]
```

external variable to receive characters

5.4 CMSIS Core

Modules

- CMSIS NVIC

Data Structures

- union APSR_Type

  Union type to access the Application Program Status Register (APSR).
- union IPSR_Type

  Union type to access the Interrupt Program Status Register (IPSR).
- union xPSR_Type

  Union type to access the Special-Purpose Program Status Registers (xPSR).
- union CONTROL_Type

  Union type to access the Control Registers (CONTROL).

5.4.1 Detailed Description

Type definitions for the Cortex-M Core Registers

5.5 CMSIS NVIC

Modules

- CMSIS SCB

Data Structures

- struct NVIC_Type

  Structure type to access the Nested Vectored Interrupt Controller (NVIC).

Macros

- #define NVIC_STIR_INTID_Pos 0
- #define NVIC_STIR_INTID_Msk (0x1FFUL << NVIC_STIR_INTID_Pos)

5.5.1 Detailed Description

Type definitions for the Cortex-M NVIC Registers

5.5.2 Macro Definition Documentation

5.5.2.1 NVIC_STIR_INTID_Msk

```
#define NVIC_STIR_INTID_Msk (0x1FFUL << NVIC_STIR_INTID_Pos)
```

STIR: INTLINESNUM Mask

5.5.2.2 NVIC_STIR_INTID_Pos

```
#define NVIC_STIR_INTID_Pos 0
```

STIR: INTLINESNUM Position

5.6 CMSIS SCB

Modules

- CMSIS System Control and ID Register not in the SCB

Data Structures

- struct SCB_Type

  Structure type to access the System Control Block (SCB).

Macros

- #define SCB_CPUID_IMPLEMENTER_Pos 24
- #define SCB_CPUID_IMPLEMENTER_Msk (0xFFUL << SCB_CPUID_IMPLEMENTER_Pos)
- #define SCB_CPUID_VARIANT_Pos 20
- #define SCB_CPUID_VARIANT_Msk (0xFUL << SCB_CPUID_VARIANT_Pos)
- #define SCB_CPUID_ARCHITECTURE_Pos 16
- #define SCB_CPUID_ARCHITECTURE_Msk (0xFUL << SCB_CPUID_ARCHITECTURE_Pos)
- #define SCB_CPUID_PARTNO_Pos 4
- #define SCB_CPUID_PARTNO_Msk (0xFFFUL << SCB_CPUID_PARTNO_Pos)
- #define SCB_CPUID_REVISION_Pos 0
- #define SCB_CPUID_REVISION_Msk (0xFUL << SCB_CPUID_REVISION_Pos)
- #define SCB_ICSR_NMIPENDSET_Pos 31
- #define SCB_ICSR_NMIPENDSET_Msk (1UL << SCB_ICSR_NMIPENDSET_Pos)
- #define SCB_ICSR_PENDSVSET_Pos 28
- #define SCB_ICSR_PENDSVSET_Msk (1UL << SCB_ICSR_PENDSVSET_Pos)
- #define SCB_ICSR_PENDSVCLR_Pos 27
- #define SCB_ICSR_PENDSVCLR_Msk (1UL << SCB_ICSR_PENDSVCLR_Pos)
- #define SCB_ICSR_PENDSTSET_Pos 26
- #define SCB_ICSR_PENDSTSET_Msk (1UL << SCB_ICSR_PENDSTSET_Pos)
- #define SCB_ICSR_PENDSTCLR_Pos 25

5.10.1 Detailed Description

Type definitions for the Cortex-M Core Debug Registers

5.10.2 Macro Definition Documentation

5.10.2.1 CoreDebug

```
#define CoreDebug ((CoreDebug_Type *) CoreDebug_BASE)
```

Core Debug configuration struct

5.10.2.2 CoreDebug_BASE

```
#define CoreDebug_BASE (0xE000EDF0UL)
```

Core Debug Base Address

5.10.2.3 CoreDebug_DCRSR_REGSEL_Msk

```
#define CoreDebug_DCRSR_REGSEL_Msk (0x1FUL << CoreDebug_DCRSR_REGSEL_Pos)
```

CoreDebug DCRSR: REGSEL Mask

5.10.2.4 CoreDebug_DCRSR_REGSEL_Pos

```
#define CoreDebug_DCRSR_REGSEL_Pos 0
```

CoreDebug DCRSR: REGSEL Position

5.10.2.5 CoreDebug_DCRSR_REGWnR_Msk

```
#define CoreDebug_DCRSR_REGWnR_Msk (1UL << CoreDebug_DCRSR_REGWnR_Pos)
```

CoreDebug DCRSR: REGWnR Mask

5.10.2.6 CoreDebug_DCRSR_REGWnR_Pos

```
#define CoreDebug_DCRSR_REGWnR_Pos 16
```

CoreDebug DCRSR: REGWnR Position

5.10.2.7 CoreDebug_DEMCR_MON_EN_Msk

```
#define CoreDebug_DEMCR_MON_EN_Msk (1UL << CoreDebug_DEMCR_MON_EN_Pos)
```

CoreDebug DEMCR: MON_EN Mask

5.10.2.8 CoreDebug_DEMCR_MON_EN_Pos

```
#define CoreDebug_DEMCR_MON_EN_Pos 16
```

CoreDebug DEMCR: MON_EN Position

5.10.2.9 CoreDebug_DEMCR_MON_PEND_Msk

```
#define CoreDebug_DEMCR_MON_PEND_Msk (1UL << CoreDebug_DEMCR_MON_PEND_Pos)
```

CoreDebug DEMCR: MON_PEND Mask

5.10.2.10 CoreDebug_DEMCR_MON_PEND_Pos

5.69.2.1 IS_TIM_OPM_MODE

```
#define IS_TIM_OPM_MODE(
              MODE )
```

Value:

```
((MODE) == TIM_OPMode_Single) || \
((MODE) == TIM_OPMode_Repetitive))
```

5.70 TIM_Channel

Macros

- #define **TIM_Channel_1** ((uint16_t)0x0000)
- #define **TIM_Channel_2** ((uint16_t)0x0004)
- #define **TIM_Channel_3** ((uint16_t)0x0008)
- #define **TIM_Channel_4** ((uint16_t)0x000C)
- #define IS_TIM_CHANNEL(CHANNEL)
- #define IS_TIM_PWMI_CHANNEL(CHANNEL)
- #define IS_TIM_COMPLEMENTARY_CHANNEL(CHANNEL)

5.70.1 Detailed Description

5.70.2 Macro Definition Documentation

5.70.2.1 IS_TIM_CHANNEL

```
#define IS_TIM_CHANNEL(
              CHANNEL )
```

Value:

```
(((CHANNEL) == TIM_Channel_1) || \
((CHANNEL) == TIM_Channel_2) || \
((CHANNEL) == TIM_Channel_3) || \
((CHANNEL) == TIM_Channel_4))
```

5.70.2.2 IS_TIM_COMPLEMENTARY_CHANNEL

```
#define IS_TIM_COMPLEMENTARY_CHANNEL(
              CHANNEL )
```

Value:

```
(((CHANNEL) == TIM_Channel_1) || \
((CHANNEL) == TIM_Channel_2) || \
((CHANNEL) == TIM_Channel_3))
```

5.70.2.3 IS_TIM_PWMI_CHANNEL

```
#define IS_TIM_PWMI_CHANNEL(
              CHANNEL )
```

Value:

```
(((CHANNEL) == TIM_Channel_1) || \
((CHANNEL) == TIM_Channel_2))
```

5.71 TIM_Clock_Division_CKD

Macros

- #define **TIM_CKD_DIV1** ((uint16_t)0x0000)
- #define **TIM_CKD_DIV2** ((uint16_t)0x0100)
- #define **TIM_CKD_DIV4** ((uint16_t)0x0200)
- #define IS_TIM_CKD_DIV(DIV)

5.71.1 Detailed Description

5.71.2 Macro Definition Documentation

5.71.2.1 IS_TIM_CKD_DIV

```
#define IS_TIM_CKD_DIV(
              DIV )
```

Value:

```
(((DIV) == TIM_CKD_DIV1) || \
((DIV) == TIM_CKD_DIV2) || \
((DIV) == TIM_CKD_DIV4))
```

5.72 TIM_Counter_Mode

Macros

- #define **TIM_CounterMode_Up** ((uint16_t)0x0000)
- #define **TIM_CounterMode_Down** ((uint16_t)0x0010)
- #define **TIM_CounterMode_CenterAligned1** ((uint16_t)0x0020)
- #define **TIM_CounterMode_CenterAligned2** ((uint16_t)0x0040)
- #define **TIM_CounterMode_CenterAligned3** ((uint16_t)0x0060)
- #define IS_TIM_COUNTER_MODE(MODE)

5.72.1 Detailed Description

5.72.2 Macro Definition Documentation

5.72.2.1 IS_TIM_COUNTER_MODE

```
#define IS_TIM_COUNTER_MODE(
              MODE )
```

Value:

```
(((MODE) == TIM_CounterMode_Up) ||  \
((MODE) == TIM_CounterMode_Down) || \
((MODE) == TIM_CounterMode_CenterAligned1) || \
((MODE) == TIM_CounterMode_CenterAligned2) || \
((MODE) == TIM_CounterMode_CenterAligned3))
```

5.73 TIM_Output_Compare_Polarity

Macros

- #define **TIM_OCPolarity_High** ((uint16_t)0x0000)
- #define **TIM_OCPolarity_Low** ((uint16_t)0x0002)
- #define IS_TIM_OC_POLARITY(POLARITY)

5.73.1 Detailed Description

5.73.2 Macro Definition Documentation

5.73.2.1 IS_TIM_OC_POLARITY

```
#define IS_TIM_OC_POLARITY(
              POLARITY )
```

Value:

```
(((POLARITY) == TIM_OCPolarity_High) || \
((POLARITY) == TIM_OCPolarity_Low))
```

5.74 TIM_Output_Compare_N_Polarity

Macros

- #define **TIM_OCNPolarity_High** ((uint16_t)0x0000)
- #define **TIM_OCNPolarity_Low** ((uint16_t)0x0008)
- #define IS_TIM_OCN_POLARITY(POLARITY)

5.74.1 Detailed Description

5.74.2 Macro Definition Documentation

5.74.2.1 IS_TIM_OCN_POLARITY

```
#define IS_TIM_OCN_POLARITY(
              POLARITY )
```

Value:

```
(((POLARITY) == TIM_OCNPolarity_High) || \
((POLARITY) == TIM_OCNPolarity_Low))
```

5.75 TIM_Output_Compare_State

Macros

- #define **TIM_OutputState_Disable** ((uint16_t)0x0000)
- #define **TIM_OutputState_Enable** ((uint16_t)0x0001)
- #define IS_TIM_OUTPUT_STATE(STATE)

5.75.1 Detailed Description

5.75.2 Macro Definition Documentation

5.75.2.1 IS_TIM_OUTPUT_STATE

```
#define IS_TIM_OUTPUT_STATE(
              STATE )
```

Value:

```
(((STATE) == TIM_OutputState_Disable) || \
((STATE) == TIM_OutputState_Enable))
```

5.76 TIM_Output_Compare_N_State

Macros

- #define **TIM_OutputNState_Disable** ((uint16_t)0x0000)
- #define **TIM_OutputNState_Enable** ((uint16_t)0x0004)
- #define IS_TIM_OUTPUTN_STATE(STATE)

5.76.1 Detailed Description

5.76.2 Macro Definition Documentation

5.76.2.1 IS_TIM_OUTPUTN_STATE

```
#define IS_TIM_OUTPUTN_STATE(
              STATE )
```

Value:

```
(((STATE) == TIM_OutputNState_Disable) || \
((STATE) == TIM_OutputNState_Enable))
```

5.77 TIM_Capture_Compare_State

Macros

- #define **TIM_CCx_Enable** ((uint16_t)0x0001)
- #define **TIM_CCx_Disable** ((uint16_t)0x0000)
- #define IS_TIM_CCX(CCX)

5.77.1 Detailed Description

5.77.2 Macro Definition Documentation

5.77.2.1 IS_TIM_CCX

```
#define IS_TIM_CCX(
              CCX )
```

Value:

```
(((CCX) == TIM_CCx_Enable) || \
((CCX) == TIM_CCx_Disable))
```

5.78 TIM_Capture_Compare_N_State

Macros

- #define **TIM_CCxN_Enable** ((uint16_t)0x0004)
- #define **TIM_CCxN_Disable** ((uint16_t)0x0000)
- #define IS_TIM_CCXN(CCXN)

5.78.1 Detailed Description

5.78.2 Macro Definition Documentation

5.78.2.1 IS_TIM_CCXN

```
#define IS_TIM_CCXN(
              CCXN )
```

Value:

```
                        (((CCXN) == TIM_CCxN_Enable) || \
                        ((CCXN) == TIM_CCxN_Disable))
```

5.79 TIM_Break_Input_enable_disable

Macros

- #define **TIM_Break_Enable** ((uint16_t)0x1000)
- #define **TIM_Break_Disable** ((uint16_t)0x0000)
- #define IS_TIM_BREAK_STATE(STATE)

5.79.1 Detailed Description

5.79.2 Macro Definition Documentation

5.79.2.1 IS_TIM_BREAK_STATE

```
#define IS_TIM_BREAK_STATE(
              STATE )
```

Value:

```
                                ((STATE) == TIM_Break_Enable) || \
                                ((STATE) == TIM_Break_Disable))
```

5.80 TIM_Break_Polarity

Macros

- #define **TIM_BreakPolarity_Low** ((uint16_t)0x0000)
- #define **TIM_BreakPolarity_High** ((uint16_t)0x2000)
- #define IS_TIM_BREAK_POLARITY(POLARITY)

5.80.1 Detailed Description

5.80.2 Macro Definition Documentation

5.80.2.1 IS_TIM_BREAK_POLARITY

```
#define IS_TIM_BREAK_POLARITY(
              POLARITY )
```

Value:

```
(((POLARITY) == TIM_BreakPolarity_Low) || \
((POLARITY) == TIM_BreakPolarity_High))
```

5.81 TIM_AOE_Bit_Set_Reset

Macros

- #define **TIM_AutomaticOutput_Enable** ((uint16_t)0x4000)
- #define **TIM_AutomaticOutput_Disable** ((uint16_t)0x0000)
- #define IS_TIM_AUTOMATIC_OUTPUT_STATE(STATE)

5.81.1 Detailed Description

5.81.2 Macro Definition Documentation

5.81.2.1 IS_TIM_AUTOMATIC_OUTPUT_STATE

```
#define IS_TIM_AUTOMATIC_OUTPUT_STATE(
              STATE )
```

Value:

```
(((STATE) == TIM_AutomaticOutput_Enable) || \
((STATE) == TIM_AutomaticOutput_Disable))
```

5.82 TIM_Lock_level

Macros

- #define **TIM_LOCKLevel_OFF** ((uint16_t)0x0000)
- #define **TIM_LOCKLevel_1** ((uint16_t)0x0100)
- #define **TIM_LOCKLevel_2** ((uint16_t)0x0200)
- #define **TIM_LOCKLevel_3** ((uint16_t)0x0300)
- #define IS_TIM_LOCK_LEVEL(LEVEL)

5.82.1 Detailed Description

5.82.2 Macro Definition Documentation

5.82.2.1 IS_TIM_LOCK_LEVEL

```
#define IS_TIM_LOCK_LEVEL(
              LEVEL )
```

Value:

```
(((LEVEL) == TIM_LOCKLevel_OFF) || \
((LEVEL) == TIM_LOCKLevel_1) || \
((LEVEL) == TIM_LOCKLevel_2) || \
((LEVEL) == TIM_LOCKLevel_3))
```

5.83 TIM_OSSI_Off_State_Selection_for_Idle_mode_state

Macros

- #define **TIM_OSSIState_Enable** ((uint16_t)0x0400)
- #define **TIM_OSSIState_Disable** ((uint16_t)0x0000)
- #define IS_TIM_OSSI_STATE(STATE)

5.83.1 Detailed Description

5.83.2 Macro Definition Documentation

5.83.2.1 IS_TIM_OSSI_STATE

```
#define IS_TIM_OSSI_STATE(
              STATE )
```

Value:

```
(((STATE) == TIM_OSSIState_Enable) || \
((STATE) == TIM_OSSIState_Disable))
```

5.84 TIM_OSSR_Off_State_Selection_for_Run_mode_state

Macros

- #define **TIM_OSSRState_Enable** ((uint16_t)0x0800)
- #define **TIM_OSSRState_Disable** ((uint16_t)0x0000)
- #define IS_TIM_OSSR_STATE(STATE)

5.84.1 Detailed Description

5.84.2 Macro Definition Documentation

5.84.2.1 IS_TIM_OSSR_STATE

```
#define IS_TIM_OSSR_STATE(
              STATE )
```

Value:

```
                                ((STATE) == TIM_OSSRState_Enable) || \
                                ((STATE) == TIM_OSSRState_Disable))
```

5.85 TIM_Output_Compare_Idle_State

Macros

- #define **TIM_OCIdleState_Set** ((uint16_t)0x0100)
- #define **TIM_OCIdleState_Reset** ((uint16_t)0x0000)
- #define IS_TIM_OCIDLE_STATE(STATE)

5.85.1 Detailed Description

5.85.2 Macro Definition Documentation

5.85.2.1 IS_TIM_OCIDLE_STATE

```
#define IS_TIM_OCIDLE_STATE(
              STATE )
```

Value:

```
                                ((STATE) == TIM_OCIdleState_Set) || \
                                ((STATE) == TIM_OCIdleState_Reset))
```

5.86 TIM_Output_Compare_N_Idle_State

Macros

- #define **TIM_OCNIdleState_Set** ((uint16_t)0x0200)
- #define **TIM_OCNIdleState_Reset** ((uint16_t)0x0000)
- #define IS_TIM_OCNIDLE_STATE(STATE)

5.86.1 Detailed Description

5.86.2 Macro Definition Documentation

5.86.2.1 IS_TIM_OCNIDLE_STATE

```
#define IS_TIM_OCNIDLE_STATE(
              STATE )
```

Value:

```
(((STATE) == TIM_OCNIdleState_Set) || \
((STATE) == TIM_OCNIdleState_Reset))
```

5.87 TIM_Input_Capture_Polarity

Macros

- #define **TIM_ICPolarity_Rising** ((uint16_t)0x0000)
- #define **TIM_ICPolarity_Falling** ((uint16_t)0x0002)
- #define **TIM_ICPolarity_BothEdge** ((uint16_t)0x000A)
- #define IS_TIM_IC_POLARITY(POLARITY)

5.87.1 Detailed Description

5.87.2 Macro Definition Documentation

5.87.2.1 IS_TIM_IC_POLARITY

```
#define IS_TIM_IC_POLARITY(
              POLARITY )
```

Value:

```
(((POLARITY) == TIM_ICPolarity_Rising) || \
((POLARITY) == TIM_ICPolarity_Falling)|| \
((POLARITY) == TIM_ICPolarity_BothEdge))
```

5.88 TIM_Input_Capture_Selection

Macros

- #define TIM_ICSelection_DirectTI ((uint16_t)0x0001)
- #define TIM_ICSelection_IndirectTI ((uint16_t)0x0002)
- #define TIM_ICSelection_TRC ((uint16_t)0x0003)
- #define IS_TIM_IC_SELECTION(SELECTION)

5.88.1 Detailed Description

5.88.2 Macro Definition Documentation

5.88.2.1 IS_TIM_IC_SELECTION

```
#define IS_TIM_IC_SELECTION(
              SELECTION )
```

Value:

```
(((SELECTION) == TIM_ICSelection_DirectTI) || \
((SELECTION) == TIM_ICSelection_IndirectTI) || \
((SELECTION) == TIM_ICSelection_TRC))
```

5.88.2.2 TIM_ICSelection_DirectTI

```
#define TIM_ICSelection_DirectTI ((uint16_t)0x0001)
```

TIM Input 1, 2, 3 or 4 is selected to be connected to IC1, IC2, IC3 or IC4, respectively

5.88.2.3 TIM_ICSelection_IndirectTI

```
#define TIM_ICSelection_IndirectTI ((uint16_t)0x0002)
```

TIM Input 1, 2, 3 or 4 is selected to be connected to IC2, IC1, IC4 or IC3, respectively.

5.88.2.4 TIM_ICSelection_TRC

```
#define TIM_ICSelection_TRC ((uint16_t)0x0003)
```

TIM Input 1, 2, 3 or 4 is selected to be connected to TRC.

5.89 TIM_Input_Capture_Prescaler

Macros

- #define TIM_ICPSC_DIV1 ((uint16_t)0x0000)
- #define TIM_ICPSC_DIV2 ((uint16_t)0x0004)
- #define TIM_ICPSC_DIV4 ((uint16_t)0x0008)
- #define TIM_ICPSC_DIV8 ((uint16_t)0x000C)
- #define IS_TIM_IC_PRESCALER(PRESCALER)

5.89.1 Detailed Description

5.89.2 Macro Definition Documentation

5.89.2.1 IS_TIM_IC_PRESCALER

```
#define IS_TIM_IC_PRESCALER(
              PRESCALER )
```

Value:

```
(((PRESCALER) == TIM_ICPSC_DIV1) || \
((PRESCALER) == TIM_ICPSC_DIV2) || \
((PRESCALER) == TIM_ICPSC_DIV4) || \
((PRESCALER) == TIM_ICPSC_DIV8))
```

5.89.2.2 TIM_ICPSC_DIV1

```
#define TIM_ICPSC_DIV1 ((uint16_t)0x0000)
```

Capture performed each time an edge is detected on the capture input.

5.89.2.3 TIM_ICPSC_DIV2

```
#define TIM_ICPSC_DIV2 ((uint16_t)0x0004)
```

Capture performed once every 2 events.

5.89.2.4 TIM_ICPSC_DIV4

```
#define TIM_ICPSC_DIV4 ((uint16_t)0x0008)
```

Capture performed once every 4 events.

5.89.2.5 TIM_ICPSC_DIV8

```
#define TIM_ICPSC_DIV8 ((uint16_t)0x000C)
```

Capture performed once every 8 events.

5.90 TIM_interrupt_sources

Macros

- #define **TIM_IT_Update** ((uint16_t)0x0001)
- #define **TIM_IT_CC1** ((uint16_t)0x0002)
- #define **TIM_IT_CC2** ((uint16_t)0x0004)

5.113.1 Detailed Description

5.114 MISC

MISC driver modules.

Modules

- MISC_Exported_Constants
- MISC_Private_Functions

Data Structures

- struct NVIC_InitTypeDef

  NVIC Init Structure definition

Macros

- #define **AIRCR_VECTKEY_MASK** ((uint32_t)0x05FA0000)

Functions

- void NVIC_PriorityGroupConfig (uint32_t NVIC_PriorityGroup)

  Configures the priority grouping: pre-emption priority and subpriority.
- void NVIC_Init (NVIC_InitTypeDef *NVIC_InitStruct)

  Initializes the NVIC peripheral according to the specified parameters in the NVIC_InitStruct.
- void NVIC_SetVectorTable (uint32_t NVIC_VectTab, uint32_t Offset)

  Sets the vector table location and Offset.
- void NVIC_SystemLPConfig (uint8_t LowPowerMode, FunctionalState NewState)

  Selects the condition for the system to enter low power mode.
- void SysTick_CLKSourceConfig (uint32_t SysTick_CLKSource)

  Configures the SysTick clock source.

5.114.1 Detailed Description

MISC driver modules.

5.114.2 Function Documentation

5.114.2.1 NVIC_Init()

```
void NVIC_Init (
            NVIC_InitTypeDef * NVIC_InitStruct )
```

Initializes the NVIC peripheral according to the specified parameters in the NVIC_InitStruct.

Note

To configure interrupts priority correctly, the NVIC_PriorityGroupConfig() function should be called before.

Parameters

NVIC_InitStruct	pointer to a NVIC_InitTypeDef structure that contains the configuration information for the specified NVIC peripheral.

Return values

None	

5.114.2.2 NVIC_PriorityGroupConfig()

```
void NVIC_PriorityGroupConfig (
             uint32_t NVIC_PriorityGroup )
```

Configures the priority grouping: pre-emption priority and subpriority.

Parameters

NVIC_PriorityGroup	specifies the priority grouping bits length. This parameter can be one of the following values: • NVIC_PriorityGroup_0: 0 bits for pre-emption priority 4 bits for subpriority • NVIC_PriorityGroup_1: 1 bits for pre-emption priority 3 bits for subpriority • NVIC_PriorityGroup_2: 2 bits for pre-emption priority 2 bits for subpriority • NVIC_PriorityGroup_3: 3 bits for pre-emption priority 1 bits for subpriority • NVIC_PriorityGroup_4: 4 bits for pre-emption priority 0 bits for subpriority

Note

When the NVIC_PriorityGroup_0 is selected, IRQ pre-emption is no more possible. The pending IRQ priority will be managed only by the subpriority.

Return values

None	

5.114.2.3 NVIC_SetVectorTable()

```
void NVIC_SetVectorTable (
             uint32_t NVIC_VectTab,
             uint32_t Offset )
```

Sets the vector table location and Offset.

Parameters

NVIC_VectTab	specifies if the vector table is in RAM or FLASH memory. This parameter can be one of the following values: • NVIC_VectTab_RAM: Vector Table in internal SRAM. • NVIC_VectTab_FLASH: Vector Table in internal FLASH.
Offset	Vector Table base offset field. This value must be a multiple of 0x200.

Return values

None	

5.114.2.4 NVIC_SystemLPConfig()

```
void NVIC_SystemLPConfig (
             uint8_t LowPowerMode,
             FunctionalState NewState )
```

Selects the condition for the system to enter low power mode.

Parameters

LowPowerMode	Specifies the new mode for the system to enter low power mode. This parameter can be one of the following values: • NVIC_LP_SEVONPEND: Low Power SEV on Pend. • NVIC_LP_SLEEPDEEP: Low Power DEEPSLEEP request. • NVIC_LP_SLEEPONEXIT: Low Power Sleep on Exit.
NewState	new state of LP condition. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.114.2.5 SysTick_CLKSourceConfig()

```
void SysTick_CLKSourceConfig (
             uint32_t SysTick_CLKSource )
```

Configures the SysTick clock source.

Parameters

SysTick_CLKSource	specifies the SysTick clock source. This parameter can be one of the following values: • SysTick_CLKSource_HCLK_Div8: AHB clock divided by 8 selected as SysTick clock source. • SysTick_CLKSource_HCLK: AHB clock selected as SysTick clock source.

Return values

None	

5.115 MISC_Private_Functions

Functions

- void NVIC_PriorityGroupConfig (uint32_t NVIC_PriorityGroup)

  Configures the priority grouping: pre-emption priority and subpriority.
- void NVIC_Init (NVIC_InitTypeDef *NVIC_InitStruct)

  Initializes the NVIC peripheral according to the specified parameters in the NVIC_InitStruct.
- void NVIC_SetVectorTable (uint32_t NVIC_VectTab, uint32_t Offset)

  Sets the vector table location and Offset.
- void NVIC_SystemLPConfig (uint8_t LowPowerMode, FunctionalState NewState)

  Selects the condition for the system to enter low power mode.
- void SysTick_CLKSourceConfig (uint32_t SysTick_CLKSource)

  Configures the SysTick clock source.

5.115.1 Detailed Description

5.115.2 Function Documentation

5.115.2.1 NVIC_Init()

```
void NVIC_Init (
            NVIC_InitTypeDef * NVIC_InitStruct )
```

Initializes the NVIC peripheral according to the specified parameters in the NVIC_InitStruct.

Note

To configure interrupts priority correctly, the NVIC_PriorityGroupConfig() function should be called before.

Parameters

NVIC_InitStruct	pointer to a NVIC_InitTypeDef structure that contains the configuration information for the specified NVIC peripheral.

Return values

None	

5.115.2.2 NVIC_PriorityGroupConfig()

```
void NVIC_PriorityGroupConfig (
             uint32_t NVIC_PriorityGroup )
```

Configures the priority grouping: pre-emption priority and subpriority.

Parameters

NVIC_PriorityGroup	specifies the priority grouping bits length. This parameter can be one of the following values: • NVIC_PriorityGroup_0: 0 bits for pre-emption priority 4 bits for subpriority • NVIC_PriorityGroup_1: 1 bits for pre-emption priority 3 bits for subpriority • NVIC_PriorityGroup_2: 2 bits for pre-emption priority 2 bits for subpriority • NVIC_PriorityGroup_3: 3 bits for pre-emption priority 1 bits for subpriority • NVIC_PriorityGroup_4: 4 bits for pre-emption priority 0 bits for subpriority

Note

When the NVIC_PriorityGroup_0 is selected, IRQ pre-emption is no more possible. The pending IRQ priority will be managed only by the subpriority.

Return values

None	

5.115.2.3 NVIC_SetVectorTable()

```
void NVIC_SetVectorTable (
             uint32_t NVIC_VectTab,
             uint32_t Offset )
```

Sets the vector table location and Offset.

Parameters

NVIC_VectTab	specifies if the vector table is in RAM or FLASH memory. This parameter can be one of the following values: • NVIC_VectTab_RAM: Vector Table in internal SRAM. • NVIC_VectTab_FLASH: Vector Table in internal FLASH.
Offset	Vector Table base offset field. This value must be a multiple of 0x200.

Return values

None	

5.115.2.4 NVIC_SystemLPConfig()

```
void NVIC_SystemLPConfig (
             uint8_t LowPowerMode,
             FunctionalState NewState )
```

Selects the condition for the system to enter low power mode.

Parameters

LowPowerMode	Specifies the new mode for the system to enter low power mode. This parameter can be one of the following values: • NVIC_LP_SEVONPEND: Low Power SEV on Pend. • NVIC_LP_SLEEPDEEP: Low Power DEEPSLEEP request. • NVIC_LP_SLEEPONEXIT: Low Power Sleep on Exit.
NewState	new state of LP condition. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.115.2.5 SysTick_CLKSourceConfig()

```
void SysTick_CLKSourceConfig (
             uint32_t SysTick_CLKSource )
```

Configures the SysTick clock source.

Parameters

SysTick_CLKSource	specifies the SysTick clock source. This parameter can be one of the following values: • SysTick_CLKSource_HCLK_Div8: AHB clock divided by 8 selected as SysTick clock source. • SysTick_CLKSource_HCLK: AHB clock selected as SysTick clock source.

Return values

None	

5.116 DMA

DMA driver modules.

Modules

- DMA_Exported_Constants
- DMA_Private_Functions

Data Structures

- struct DMA_InitTypeDef

  DMA Init structure definition.

Macros

- #define TRANSFER_IT_ENABLE_MASK
- #define DMA_Stream0_IT_MASK
- #define **DMA_Stream1_IT_MASK** (uint32_t)(DMA_Stream0_IT_MASK << 6)
- #define **DMA_Stream2_IT_MASK** (uint32_t)(DMA_Stream0_IT_MASK << 16)
- #define **DMA_Stream3_IT_MASK** (uint32_t)(DMA_Stream0_IT_MASK << 22)
- #define **DMA_Stream4_IT_MASK** (uint32_t)(DMA_Stream0_IT_MASK | (uint32_t)0x20000000)
- #define **DMA_Stream5_IT_MASK** (uint32_t)(DMA_Stream1_IT_MASK | (uint32_t)0x20000000)
- #define **DMA_Stream6_IT_MASK** (uint32_t)(DMA_Stream2_IT_MASK | (uint32_t)0x20000000)

- #define **TRANSFER_IT_MASK** (uint32_t)0x0F3C0F3C
- #define **HIGH_ISR_MASK** (uint32_t)0x20000000
- #define **RESERVED_MASK** (uint32_t)0x0F7D0F7D

Functions

- void DMA_DeInit (DMA_Stream_TypeDef *DMAy_Streamx)

  Deinitialize the DMAy Streamx registers to their default reset values.
- void DMA_Init (DMA_Stream_TypeDef *DMAy_Streamx, DMA_InitTypeDef *DMA_InitStruct)

  Initializes the DMAy Streamx according to the specified parameters in the DMA_InitStruct structure.
- void DMA_StructInit (DMA_InitTypeDef *DMA_InitStruct)

  Fills each DMA_InitStruct member with its default value.
- void DMA_Cmd (DMA_Stream_TypeDef *DMAy_Streamx, FunctionalState NewState)

  Enables or disables the specified DMAy Streamx.
- void DMA_PeriphIncOffsetSizeConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_Pincos)

  Configures, when the PINC (Peripheral Increment address mode) bit is set, if the peripheral address should be incremented with the data size (configured with PSIZE bits) or by a fixed offset equal to 4 (32-bit aligned addresses).
- void DMA_FlowControllerConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FlowCtrl)

  Configures, when the DMAy Streamx is disabled, the flow controller for the next transactions (Peripheral or Memory).
- void DMA_SetCurrDataCounter (DMA_Stream_TypeDef *DMAy_Streamx, uint16_t Counter)

  Writes the number of data units to be transferred on the DMAy Streamx.
- uint16_t DMA_GetCurrDataCounter (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the number of remaining data units in the current DMAy Streamx transfer.
- void DMA_DoubleBufferModeConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t Memory1BaseAddr, uint32_t DMA_CurrentMemory)

  Configures, when the DMAy Streamx is disabled, the double buffer mode and the current memory target.
- void DMA_DoubleBufferModeCmd (DMA_Stream_TypeDef *DMAy_Streamx, FunctionalState NewState)

  Enables or disables the double buffer mode for the selected DMA stream.
- void DMA_MemoryTargetConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t MemoryBaseAddr, uint32_t DMA_MemoryTarget)

  Configures the Memory address for the next buffer transfer in double buffer mode (for dynamic use). This function can be called when the DMA Stream is enabled and when the transfer is ongoing.
- uint32_t DMA_GetCurrentMemoryTarget (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the current memory target used by double buffer transfer.
- FunctionalState DMA_GetCmdStatus (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the status of EN bit for the specified DMAy Streamx.
- uint32_t DMA_GetFIFOStatus (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the current DMAy Streamx FIFO filled level.
- FlagStatus DMA_GetFlagStatus (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FLAG)

  Checks whether the specified DMAy Streamx flag is set or not.
- void DMA_ClearFlag (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FLAG)

  Clears the DMAy Streamx's pending flags.
- void DMA_ITConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT, FunctionalState NewState)

  Enables or disables the specified DMAy Streamx interrupts.
- ITStatus DMA_GetITStatus (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT)

  Checks whether the specified DMAy Streamx interrupt has occurred or not.
- void DMA_ClearITPendingBit (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT)

  Clears the DMAy Streamx's interrupt pending bits.

5.116.1 Detailed Description

DMA driver modules.

5.116.2 Macro Definition Documentation

5.116.2.1 DMA_Stream0_IT_MASK

```
#define DMA_Stream0_IT_MASK
```

Value:

```
(uint32_t)(DMA_LISR_FEIF0 | DMA_LISR_DMEIF0 | \
DMA_LISR_TEIF0 | DMA_LISR_HTIF0 | \
DMA_LISR_TCIF0)
```

5.116.2.2 TRANSFER_IT_ENABLE_MASK

```
#define TRANSFER_IT_ENABLE_MASK
```

Value:

```
(uint32_t)(DMA_SxCR_TCIE | DMA_SxCR_HTIE | \
DMA_SxCR_TEIE | DMA_SxCR_DMEIE)
```

5.116.3 Function Documentation

5.116.3.1 DMA_ClearFlag()

```
void DMA_ClearFlag (
            DMA_Stream_TypeDef * DMAy_Streamx,
            uint32_t DMA_FLAG )
```

Clears the DMAy Streamx's pending flags.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_FLAG	specifies the flag to clear. This parameter can be any combination of the following values: • DMA_FLAG_TCIFx: Streamx transfer complete flag • DMA_FLAG_HTIFx: Streamx half transfer complete flag • DMA_FLAG_TEIFx: Streamx transfer error flag • DMA_FLAG_DMEIFx: Streamx direct mode error flag • DMA_FLAG_FEIFx: Streamx FIFO error flag Where x can be 0 to 7 to select the DMA Stream.

Return values

None	

5.116.3.2 DMA_ClearITPendingBit()

```
void DMA_ClearITPendingBit (
            DMA_Stream_TypeDef * DMAy_Streamx,
            uint32_t DMA_IT )
```

Clears the DMAy Streamx's interrupt pending bits.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_IT	specifies the DMA interrupt pending bit to clear. This parameter can be any combination of the following values: • DMA_IT_TCIFx: Streamx transfer complete interrupt • DMA_IT_HTIFx: Streamx half transfer complete interrupt • DMA_IT_TEIFx: Streamx transfer error interrupt • DMA_IT_DMEIFx: Streamx direct mode error interrupt • DMA_IT_FEIFx: Streamx FIFO error interrupt Where x can be 0 to 7 to select the DMA Stream.

Return values

None	

5.116.3.3 DMA_Cmd()

```
void DMA_Cmd (
            DMA_Stream_TypeDef * DMAy_Streamx,
            FunctionalState NewState )
```

Enables or disables the specified DMAy Streamx.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
NewState	new state of the DMAy Streamx. This parameter can be: ENABLE or DISABLE.

Note

This function may be used to perform Pause-Resume operation. When a transfer is ongoing, calling this function to disable the Stream will cause the transfer to be paused. All configuration registers and the number of remaining data will be preserved. When calling again this function to re-enable the Stream, the transfer will be resumed from the point where it was paused.

After configuring the DMA Stream (DMA_Init() function) and enabling the stream, it is recommended to check (or wait until) the DMA Stream is effectively enabled. A Stream may remain disabled if a configuration parameter is wrong. After disabling a DMA Stream, it is also recommended to check (or wait until) the DMA Stream is effectively disabled. If a Stream is disabled while a data transfer is ongoing, the current data will be transferred and the Stream will be effectively disabled only after the transfer of this single data is finished.

Return values

None	

5.116.3.4 DMA_DeInit()

```
void DMA_DeInit (
             DMA_Stream_TypeDef * DMAy_Streamx )
```

Deinitialize the DMAy Streamx registers to their default reset values.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Return values

None	

5.116.3.5 DMA_DoubleBufferModeCmd()

```
void DMA_DoubleBufferModeCmd (
             DMA_Stream_TypeDef * DMAy_Streamx,
             FunctionalState NewState )
```

Enables or disables the double buffer mode for the selected DMA stream.

Note

This function can be called only when the DMA Stream is disabled.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
NewState	new state of the DMAy Streamx double buffer mode. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.116.3.6 DMA_DoubleBufferModeConfig()

```
void DMA_DoubleBufferModeConfig (
             DMA_Stream_TypeDef * DMAy_Streamx,
             uint32_t Memory1BaseAddr,
             uint32_t DMA_CurrentMemory )
```

Configures, when the DMAy Streamx is disabled, the double buffer mode and the current memory target.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
Memory1BaseAddr	the base address of the second buffer (Memory 1)
DMA_CurrentMemory	specifies which memory will be first buffer for the transactions when the Stream will be enabled. This parameter can be one of the following values: • DMA_Memory_0: Memory 0 is the current buffer. • DMA_Memory_1: Memory 1 is the current buffer.

Note

Memory0BaseAddr is set by the DMA structure configuration in DMA_Init().

Return values

None	

5.116.3.7 DMA_FlowControllerConfig()

```
void DMA_FlowControllerConfig (
             DMA_Stream_TypeDef * DMAy_Streamx,
             uint32_t DMA_FlowCtrl )
```

Configures, when the DMAy Streamx is disabled, the flow controller for the next transactions (Peripheral or Memory).

Note

Before enabling this feature, check if the used peripheral supports the Flow Controller mode or not.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_FlowCtrl	specifies the DMA flow controller. This parameter can be one of the following values: • DMA_FlowCtrl_Memory: DMAy_Streamx transactions flow controller is the DMA controller. • DMA_FlowCtrl_Peripheral: DMAy_Streamx transactions flow controller is the peripheral.

Return values

None	

5.116.3.8 DMA_GetCmdStatus()

```
FunctionalState DMA_GetCmdStatus (
            DMA_Stream_TypeDef * DMAy_Streamx )
```

Returns the status of EN bit for the specified DMAy Streamx.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Note

After configuring the DMA Stream (DMA_Init() function) and enabling the stream, it is recommended to check (or wait until) the DMA Stream is effectively enabled. A Stream may remain disabled if a configuration parameter is wrong. After disabling a DMA Stream, it is also recommended to check (or wait until) the DMA Stream is effectively disabled. If a Stream is disabled while a data transfer is ongoing, the current data will be transferred and the Stream will be effectively disabled only after the transfer of this single data is finished.

Return values

Current	state of the DMAy Streamx (ENABLE or DISABLE).

5.116.3.9 DMA_GetCurrDataCounter()

```
uint16_t DMA_GetCurrDataCounter (
            DMA_Stream_TypeDef * DMAy_Streamx )
```

Returns the number of remaining data units in the current DMAy Streamx transfer.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Return values

The	number of remaining data units in the current DMAy Streamx transfer.

5.116.3.10 DMA_GetCurrentMemoryTarget()

```
uint32_t DMA_GetCurrentMemoryTarget (
            DMA_Stream_TypeDef * DMAy_Streamx )
```

Returns the current memory target used by double buffer transfer.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Return values

The	memory target number: 0 for Memory0 or 1 for Memory1.

5.116.3.11 DMA_GetFIFOStatus()

```
uint32_t DMA_GetFIFOStatus (
            DMA_Stream_TypeDef * DMAy_Streamx )
```

Returns the current DMAy Streamx FIFO filled level.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Return values

The	FIFO filling state. • DMA_FIFOStatus_Less1QuarterFull: when FIFO is less than 1 quarter-full and not empty. • DMA_FIFOStatus_1QuarterFull: if more than 1 quarter-full. • DMA_FIFOStatus_HalfFull: if more than 1 half-full. • DMA_FIFOStatus_3QuartersFull: if more than 3 quarters-full. • DMA_FIFOStatus_Empty: when FIFO is empty • DMA_FIFOStatus_Full: when FIFO is full

5.116.3.12 DMA_GetFlagStatus()

```
FlagStatus DMA_GetFlagStatus (
              DMA_Stream_TypeDef * DMAy_Streamx,
              uint32_t DMA_FLAG )
```

Checks whether the specified DMAy Streamx flag is set or not.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_FLAG	specifies the flag to check. This parameter can be one of the following values: • DMA_FLAG_TCIFx: Streamx transfer complete flag • DMA_FLAG_HTIFx: Streamx half transfer complete flag • DMA_FLAG_TEIFx: Streamx transfer error flag • DMA_FLAG_DMEIFx: Streamx direct mode error flag • DMA_FLAG_FEIFx: Streamx FIFO error flag Where x can be 0 to 7 to select the DMA Stream.

Return values

The	new state of DMA_FLAG (SET or RESET).

5.116.3.13 DMA_GetITStatus()

```
ITStatus DMA_GetITStatus (
              DMA_Stream_TypeDef * DMAy_Streamx,
              uint32_t DMA_IT )
```

Checks whether the specified DMAy Streamx interrupt has occurred or not.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_IT	specifies the DMA interrupt source to check. This parameter can be one of the following values: • DMA_IT_TCIFx: Streamx transfer complete interrupt • DMA_IT_HTIFx: Streamx half transfer complete interrupt • DMA_IT_TEIFx: Streamx transfer error interrupt • DMA_IT_DMEIFx: Streamx direct mode error interrupt • DMA_IT_FEIFx: Streamx FIFO error interrupt Where x can be 0 to 7 to select the DMA Stream.

Return values

The	new state of DMA_IT (SET or RESET).

5.116.3.14 DMA_Init()

```
void DMA_Init (
             DMA_Stream_TypeDef * DMAy_Streamx,
             DMA_InitTypeDef * DMA_InitStruct )
```

Initializes the DMAy Streamx according to the specified parameters in the DMA_InitStruct structure.

Note

Before calling this function, it is recommended to check that the Stream is actually disabled using the function DMA_GetCmdStatus().

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_InitStruct	pointer to a DMA_InitTypeDef structure that contains the configuration information for the specified DMA Stream.

Return values

None	

5.116.3.15 DMA_ITConfig()

```
void DMA_ITConfig (
              DMA_Stream_TypeDef * DMAy_Streamx,
              uint32_t DMA_IT,
              FunctionalState NewState )
```

Enables or disables the specified DMAy Streamx interrupts.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_IT	specifies the DMA interrupt sources to be enabled or disabled. This parameter can be any combination of the following values: • DMA_IT_TC: Transfer complete interrupt mask • DMA_IT_HT: Half transfer complete interrupt mask • DMA_IT_TE: Transfer error interrupt mask • DMA_IT_FE: FIFO error interrupt mask
NewState	new state of the specified DMA interrupts. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.116.3.16 DMA_MemoryTargetConfig()

```
void DMA_MemoryTargetConfig (
              DMA_Stream_TypeDef * DMAy_Streamx,
              uint32_t MemoryBaseAddr,
              uint32_t DMA_MemoryTarget )
```

Configures the Memory address for the next buffer transfer in double buffer mode (for dynamic use). This function can be called when the DMA Stream is enabled and when the transfer is ongoing.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
MemoryBaseAddr	The base address of the target memory buffer
DMA_MemoryTarget	Next memory target to be used. This parameter can be one of the following values: • DMA_Memory_0: To use the memory address 0 • DMA_Memory_1: To use the memory address 1

Note

It is not allowed to modify the Base Address of a target Memory when this target is involved in the current transfer. ie. If the DMA Stream is currently transferring to/from Memory 1, then it not possible to modify Base address of Memory 1, but it is possible to modify Base address of Memory 0. To know which Memory is currently used, you can use the function DMA_GetCurrentMemoryTarget().

Return values

None	

5.116.3.17 DMA_PeriphIncOffsetSizeConfig()

```
void DMA_PeriphIncOffsetSizeConfig (
             DMA_Stream_TypeDef * DMAy_Streamx,
             uint32_t DMA_Pincos )
```

Configures, when the PINC (Peripheral Increment address mode) bit is set, if the peripheral address should be incremented with the data size (configured with PSIZE bits) or by a fixed offset equal to 4 (32-bit aligned addresses).

Note

This function has no effect if the Peripheral Increment mode is disabled.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_Pincos	specifies the Peripheral increment offset size. This parameter can be one of the following values: • DMA_PINCOS_Psize: Peripheral address increment is done accordingly to PSIZE parameter. • DMA_PINCOS_WordAligned: Peripheral address increment offset is fixed to 4 (32-bit aligned addresses).

Return values

None	

5.116.3.18 DMA_SetCurrDataCounter()

```
void DMA_SetCurrDataCounter (
             DMA_Stream_TypeDef * DMAy_Streamx,
             uint16_t Counter )
```

Writes the number of data units to be transferred on the DMAy Streamx.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
Counter	Number of data units to be transferred (from 0 to 65535) Number of data items depends only on the Peripheral data format.

Note

If Peripheral data format is Bytes: number of data units is equal to total number of bytes to be transferred.

If Peripheral data format is Half-Word: number of data units is
equal to total number of bytes to be transferred / 2.

If Peripheral data format is Word: number of data units is equal to total number of bytes to be transferred / 4.

In Memory-to-Memory transfer mode, the memory buffer pointed by DMAy_SxPAR register is considered as Peripheral.

Return values

The	number of remaining data units in the current DMAy Streamx transfer.

5.116.3.19 DMA_StructInit()

```
void DMA_StructInit (
            DMA_InitTypeDef * DMA_InitStruct )
```

Fills each DMA_InitStruct member with its default value.

Parameters

DMA_InitStruct	: pointer to a DMA_InitTypeDef structure which will be initialized.

Return values

None	

5.117 DMA_Private_Functions

Modules

- Initialization and Configuration functions

  Initialization and Configuration functions.
- Data Counter functions

  Data Counter functions.

  Interrupts and flags management functions.

5.117.1 Detailed Description

5.118 Initialization and Configuration functions

Initialization and Configuration functions.

Functions

- void DMA_DeInit (DMA_Stream_TypeDef *DMAy_Streamx)

  Deinitialize the DMAy Streamx registers to their default reset values.
- void DMA_Init (DMA_Stream_TypeDef *DMAy_Streamx, DMA_InitTypeDef *DMA_InitStruct)

  Initializes the DMAy Streamx according to the specified parameters in the DMA_InitStruct structure.
- void DMA_StructInit (DMA_InitTypeDef *DMA_InitStruct)

  Fills each DMA_InitStruct member with its default value.
- void DMA_Cmd (DMA_Stream_TypeDef *DMAy_Streamx, FunctionalState NewState)

  Enables or disables the specified DMAy Streamx.
- void DMA_PeriphIncOffsetSizeConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_Pincos)

  Configures, when the PINC (Peripheral Increment address mode) bit is set, if the peripheral address should be incremented with the data size (configured with PSIZE bits) or by a fixed offset equal to 4 (32-bit aligned addresses).
- void DMA_FlowControllerConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FlowCtrl)

  Configures, when the DMAy Streamx is disabled, the flow controller for the next transactions (Peripheral or Memory).

5.118.1 Detailed Description

Initialization and Configuration functions.

```
 ===================================================================================
                 Initialization and Configuration functions
 ===================================================================================

  This subsection provides functions allowing to initialize the DMA Stream source
  and destination addresses, incrementation and data sizes, transfer direction,
  buffer size, circular/normal mode selection, memory-to-memory mode selection
  and Stream priority value.

  The DMA_Init() function follows the DMA configuration procedures as described in
  reference manual (RM0090) except the first point: waiting on EN bit to be reset.
  This condition should be checked by user application using the function DMA_GetCmdStatus()
  before calling the DMA_Init() function.
```

5.118.2 Function Documentation

5.118.2.1 DMA_Cmd()

```
void DMA_Cmd (
             DMA_Stream_TypeDef * DMAy_Streamx,
             FunctionalState NewState )
```

Enables or disables the specified DMAy Streamx.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
NewState	new state of the DMAy Streamx. This parameter can be: ENABLE or DISABLE.

Note

This function may be used to perform Pause-Resume operation. When a transfer is ongoing, calling this function to disable the Stream will cause the transfer to be paused. All configuration registers and the number of remaining data will be preserved. When calling again this function to re-enable the Stream, the transfer will be resumed from the point where it was paused.

After configuring the DMA Stream (DMA_Init() function) and enabling the stream, it is recommended to check (or wait until) the DMA Stream is effectively enabled. A Stream may remain disabled if a configuration parameter is wrong. After disabling a DMA Stream, it is also recommended to check (or wait until) the DMA Stream is effectively disabled. If a Stream is disabled while a data transfer is ongoing, the current data will be transferred and the Stream will be effectively disabled only after the transfer of this single data is finished.

Return values

None	

5.118.2.2 DMA_DeInit()

```
void DMA_DeInit (
             DMA_Stream_TypeDef * DMAy_Streamx )
```

Deinitialize the DMAy Streamx registers to their default reset values.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Return values

None	

5.118.2.3 DMA_FlowControllerConfig()

```
void DMA_FlowControllerConfig (
             DMA_Stream_TypeDef * DMAy_Streamx,
             uint32_t DMA_FlowCtrl )
```

Configures, when the DMAy Streamx is disabled, the flow controller for the next transactions (Peripheral or Memory).

Note

Before enabling this feature, check if the used peripheral supports the Flow Controller mode or not.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_FlowCtrl	specifies the DMA flow controller. This parameter can be one of the following values: • DMA_FlowCtrl_Memory: DMAy_Streamx transactions flow controller is the DMA controller. • DMA_FlowCtrl_Peripheral: DMAy_Streamx transactions flow controller is the peripheral.

Return values

None	

5.118.2.4 DMA_Init()

```
void DMA_Init (
             DMA_Stream_TypeDef * DMAy_Streamx,
             DMA_InitTypeDef * DMA_InitStruct )
```

Initializes the DMAy Streamx according to the specified parameters in the DMA_InitStruct structure.

Note

Before calling this function, it is recommended to check that the Stream is actually disabled using the function DMA_GetCmdStatus().

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_InitStruct	pointer to a DMA_InitTypeDef structure that contains the configuration information for the specified DMA Stream.

Return values

None	

5.118.2.5 DMA_PeriphIncOffsetSizeConfig()

```
void DMA_PeriphIncOffsetSizeConfig (
            DMA_Stream_TypeDef * DMAy_Streamx,
            uint32_t DMA_Pincos )
```

Configures, when the PINC (Peripheral Increment address mode) bit is set, if the peripheral address should be incremented with the data size (configured with PSIZE bits) or by a fixed offset equal to 4 (32-bit aligned addresses).

Note

This function has no effect if the Peripheral Increment mode is disabled.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_Pincos	specifies the Peripheral increment offset size. This parameter can be one of the following values: • DMA_PINCOS_Psize: Peripheral address increment is done accordingly to PSIZE parameter. • DMA_PINCOS_WordAligned: Peripheral address increment offset is fixed to 4 (32-bit aligned addresses).

Return values

None	

5.118.2.6 DMA_StructInit()

```
void DMA_StructInit (
            DMA_InitTypeDef * DMA_InitStruct )
```

Fills each DMA_InitStruct member with its default value.

Parameters

DMA_InitStruct	: pointer to a DMA_InitTypeDef structure which will be initialized.

Return values

None	

5.119 Data Counter functions

Data Counter functions.

Functions

- void DMA_SetCurrDataCounter (DMA_Stream_TypeDef *DMAy_Streamx, uint16_t Counter)
  Writes the number of data units to be transferred on the DMAy Streamx.
- uint16_t DMA_GetCurrDataCounter (DMA_Stream_TypeDef *DMAy_Streamx)
  Returns the number of remaining data units in the current DMAy Streamx transfer.

5.119.1 Detailed Description

Data Counter functions.

```
 ===================================================================================
                           Data Counter functions
 ===================================================================================

  This subsection provides function allowing to configure and read the buffer size
  (number of data to be transferred).

  The DMA data counter can be written only when the DMA Stream is disabled
  (ie. after transfer complete event).

  The following function can be used to write the Stream data counter value:
    - void DMA_SetCurrDataCounter(DMA_Stream_TypeDef* DMAy_Streamx, uint16_t Counter);

@note It is advised to use this function rather than DMA_Init() in situations where
      only the Data buffer needs to be reloaded.

@note If the Source and Destination Data Sizes are different, then the value written in
      data counter, expressing the number of transfers, is relative to the number of
      transfers from the Peripheral point of view.
      ie. If Memory data size is Word, Peripheral data size is Half-Words, then the value
      to be configured in the data counter is the number of Half-Words to be transferred
      from/to the peripheral.

  The DMA data counter can be read to indicate the number of remaining transfers for
  the relative DMA Stream. This counter is decremented at the end of each data
  transfer and when the transfer is complete:
   - If Normal mode is selected: the counter is set to 0.
   - If Circular mode is selected: the counter is reloaded with the initial value
     (configured before enabling the DMA Stream)

  The following function can be used to read the Stream data counter value:
     - uint16_t DMA_GetCurrDataCounter(DMA_Stream_TypeDef* DMAy_Streamx);
```

5.119.2 Function Documentation

5.119.2.1 DMA_GetCurrDataCounter()

```
uint16_t DMA_GetCurrDataCounter (
            DMA_Stream_TypeDef * DMAy_Streamx )
```

Returns the number of remaining data units in the current DMAy Streamx transfer.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Return values

The	number of remaining data units in the current DMAy Streamx transfer.

5.119.2.2 DMA_SetCurrDataCounter()

```
void DMA_SetCurrDataCounter (
             DMA_Stream_TypeDef * DMAy_Streamx,
             uint16_t Counter )
```

Writes the number of data units to be transferred on the DMAy Streamx.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
Counter	Number of data units to be transferred (from 0 to 65535) Number of data items depends only on the Peripheral data format.

Note

If Peripheral data format is Bytes: number of data units is equal to total number of bytes to be transferred.

If Peripheral data format is Half-Word: number of data units is
equal to total number of bytes to be transferred / 2.

If Peripheral data format is Word: number of data units is equal to total number of bytes to be transferred / 4.

In Memory-to-Memory transfer mode, the memory buffer pointed by DMAy_SxPAR register is considered as Peripheral.

Return values

The	number of remaining data units in the current DMAy Streamx transfer.

5.120 Double Buffer mode functions

Double Buffer mode functions.

Functions

- void DMA_DoubleBufferModeConfig (DMA_Stream_TypeDef ∗DMAy_Streamx, uint32_t Memory1BaseAddr, uint32_t DMA_CurrentMemory)

Configures, when the DMAy Streamx is disabled, the double buffer mode and the current memory target.

- void DMA_DoubleBufferModeCmd (DMA_Stream_TypeDef *DMAy_Streamx, FunctionalState NewState)

  Enables or disables the double buffer mode for the selected DMA stream.

- void DMA_MemoryTargetConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t MemoryBaseAddr, uint32_t DMA_MemoryTarget)

  Configures the Memory address for the next buffer transfer in double buffer mode (for dynamic use). This function can be called when the DMA Stream is enabled and when the transfer is ongoing.

- uint32_t DMA_GetCurrentMemoryTarget (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the current memory target used by double buffer transfer.

5.120.1 Detailed Description

Double Buffer mode functions.

```
 ===================================================================================
                          Double Buffer mode functions
 ===================================================================================

  This subsection provides function allowing to configure and control the double
  buffer mode parameters.

  The Double Buffer mode can be used only when Circular mode is enabled.
  The Double Buffer mode cannot be used when transferring data from Memory to Memory.

  The Double Buffer mode allows to set two different Memory addresses from/to which
  the DMA controller will access alternatively (after completing transfer to/from target
  memory 0, it will start transfer to/from target memory 1).
  This allows to reduce software overhead for double buffering and reduce the CPU
  access time.

  Two functions must be called before calling the DMA_Init() function:
   - void DMA_DoubleBufferModeConfig(DMA_Stream_TypeDef* DMAy_Streamx, uint32_t Memory1BaseAddr,
                                     uint32_t DMA_CurrentMemory);
   - void DMA_DoubleBufferModeCmd(DMA_Stream_TypeDef* DMAy_Streamx, FunctionalState NewState);

  DMA_DoubleBufferModeConfig() is called to configure the Memory 1 base address and the first
  Memory target from/to which the transfer will start after enabling the DMA Stream.
  Then DMA_DoubleBufferModeCmd() must be called to enable the Double Buffer mode (or disable
  it when it should not be used).

  Two functions can be called dynamically when the transfer is ongoing (or when the DMA Stream is
  stopped) to modify on of the target Memories addresses or to check wich Memory target is currently
   used:
    - void DMA_MemoryTargetConfig(DMA_Stream_TypeDef* DMAy_Streamx, uint32_t MemoryBaseAddr,
                                  uint32_t DMA_MemoryTarget);
    - uint32_t DMA_GetCurrentMemoryTarget(DMA_Stream_TypeDef* DMAy_Streamx);

  DMA_MemoryTargetConfig() can be called to modify the base address of one of the two target Memories.
  The Memory of which the base address will be modified must not be currently be used by the DMA Stream
  (ie. if the DMA Stream is currently transferring from Memory 1 then you can only modify base address
  of target Memory 0 and vice versa).
  To check this condition, it is recommended to use the function DMA_GetCurrentMemoryTarget() which
  returns the index of the Memory target currently in use by the DMA Stream.
```

5.120.2 Function Documentation

5.120.2.1 DMA_DoubleBufferModeCmd()

```
void DMA_DoubleBufferModeCmd (
             DMA_Stream_TypeDef * DMAy_Streamx,
             FunctionalState NewState )
```

Enables or disables the double buffer mode for the selected DMA stream.

Note

This function can be called only when the DMA Stream is disabled.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
NewState	new state of the DMAy Streamx double buffer mode. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.120.2.2 DMA_DoubleBufferModeConfig()

```
void DMA_DoubleBufferModeConfig (
             DMA_Stream_TypeDef * DMAy_Streamx,
             uint32_t Memory1BaseAddr,
             uint32_t DMA_CurrentMemory )
```

Configures, when the DMAy Streamx is disabled, the double buffer mode and the current memory target.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
Memory1BaseAddr	the base address of the second buffer (Memory 1)
DMA_CurrentMemory	specifies which memory will be first buffer for the transactions when the Stream will be enabled. This parameter can be one of the following values: • DMA_Memory_0: Memory 0 is the current buffer. • DMA_Memory_1: Memory 1 is the current buffer.

Note

Memory0BaseAddr is set by the DMA structure configuration in DMA_Init().

Return values

None	

5.120.2.3 DMA_GetCurrentMemoryTarget()

```
uint32_t DMA_GetCurrentMemoryTarget (
            DMA_Stream_TypeDef * DMAy_Streamx )
```

Returns the current memory target used by double buffer transfer.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Return values

The	memory target number: 0 for Memory0 or 1 for Memory1.

5.120.2.4 DMA_MemoryTargetConfig()

```
void DMA_MemoryTargetConfig (
            DMA_Stream_TypeDef * DMAy_Streamx,
            uint32_t MemoryBaseAddr,
            uint32_t DMA_MemoryTarget )
```

Configures the Memory address for the next buffer transfer in double buffer mode (for dynamic use). This function can be called when the DMA Stream is enabled and when the transfer is ongoing.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
MemoryBaseAddr	The base address of the target memory buffer
DMA_MemoryTarget	Next memory target to be used. This parameter can be one of the following values: • DMA_Memory_0: To use the memory address 0 • DMA_Memory_1: To use the memory address 1

Note

It is not allowed to modify the Base Address of a target Memory when this target is involved in the current transfer. ie. If the DMA Stream is currently transferring to/from Memory 1, then it not possible to modify Base address of Memory 1, but it is possible to modify Base address of Memory 0. To know which Memory is

currently used, you can use the function DMA_GetCurrentMemoryTarget().

Return values

None	

5.121 Interrupts and flags management functions

Interrupts and flags management functions.

Functions

- FunctionalState DMA_GetCmdStatus (DMA_Stream_TypeDef *DMAy_Streamx)
  Returns the status of EN bit for the specified DMAy Streamx.
- uint32_t DMA_GetFIFOStatus (DMA_Stream_TypeDef *DMAy_Streamx)
  Returns the current DMAy Streamx FIFO filled level.
- FlagStatus DMA_GetFlagStatus (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FLAG)
  Checks whether the specified DMAy Streamx flag is set or not.
- void DMA_ClearFlag (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FLAG)
  Clears the DMAy Streamx's pending flags.
- void DMA_ITConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT, FunctionalState NewState)
  Enables or disables the specified DMAy Streamx interrupts.
- ITStatus DMA_GetITStatus (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT)
  Checks whether the specified DMAy Streamx interrupt has occurred or not.
- void DMA_ClearITPendingBit (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT)
  Clears the DMAy Streamx's interrupt pending bits.

5.121.1 Detailed Description

Interrupts and flags management functions.

```
 ===================================================================================
                  Interrupts and flags management functions
 ===================================================================================

  This subsection provides functions allowing to
   - Check the DMA enable status
   - Check the FIFO status
   - Configure the DMA Interrupts sources and check or clear the flags or pending bits status.

 1. DMA Enable status:
   After configuring the DMA Stream (DMA_Init() function) and enabling the stream,
   it is recommended to check (or wait until) the DMA Stream is effectively enabled.
   A Stream may remain disabled if a configuration parameter is wrong.
   After disabling a DMA Stream, it is also recommended to check (or wait until) the DMA
   Stream is effectively disabled. If a Stream is disabled while a data transfer is ongoing,
   the current data will be transferred and the Stream will be effectively disabled only after
   this data transfer completion.
   To monitor this state it is possible to use the following function:
     - FunctionalState DMA_GetCmdStatus(DMA_Stream_TypeDef* DMAy_Streamx);
```

```
2. FIFO Status:
  It is possible to monitor the FIFO status when a transfer is ongoing using the following
  function:
    - uint32_t DMA_GetFIFOStatus(DMA_Stream_TypeDef* DMAy_Streamx);

3. DMA Interrupts and Flags:
 The user should identify which mode will be used in his application to manage the
 DMA controller events: Polling mode or Interrupt mode.

 Polling Mode
 =============
   Each DMA stream can be managed through 4 event Flags:
   (x : DMA Stream number )
      1. DMA_FLAG_FEIFx  : to indicate that a FIFO Mode Transfer Error event occurred.
      2. DMA_FLAG_DMEIFx : to indicate that a Direct Mode Transfer Error event occurred.
      3. DMA_FLAG_TEIFx  : to indicate that a Transfer Error event occurred.
      4. DMA_FLAG_HTIFx  : to indicate that a Half-Transfer Complete event occurred.
      5. DMA_FLAG_TCIFx  : to indicate that a Transfer Complete event occurred .

  In this Mode it is advised to use the following functions:
     - FlagStatus DMA_GetFlagStatus(DMA_Stream_TypeDef* DMAy_Streamx, uint32_t DMA_FLAG);
     - void DMA_ClearFlag(DMA_Stream_TypeDef* DMAy_Streamx, uint32_t DMA_FLAG);

 Interrupt Mode
 ===============
   Each DMA Stream can be managed through 4 Interrupts:

   Interrupt Source
   ----------------
      1. DMA_IT_FEIFx  : specifies the interrupt source for the  FIFO Mode Transfer Error event.
      2. DMA_IT_DMEIFx : specifies the interrupt source for the Direct Mode Transfer Error event.
      3. DMA_IT_TEIFx  : specifies the interrupt source for the Transfer Error event.
      4. DMA_IT_HTIFx  : specifies the interrupt source for the Half-Transfer Complete event.
      5. DMA_IT_TCIFx  : specifies the interrupt source for the a Transfer Complete event.

 In this Mode it is advised to use the following functions:
    - void DMA_ITConfig(DMA_Stream_TypeDef* DMAy_Streamx, uint32_t DMA_IT, FunctionalState NewState);
    - ITStatus DMA_GetITStatus(DMA_Stream_TypeDef* DMAy_Streamx, uint32_t DMA_IT);
    - void DMA_ClearITPendingBit(DMA_Stream_TypeDef* DMAy_Streamx, uint32_t DMA_IT);
```

5.121.2 Function Documentation

5.121.2.1 DMA_ClearFlag()

```
void DMA_ClearFlag (
             DMA_Stream_TypeDef * DMAy_Streamx,
             uint32_t DMA_FLAG )
```

Clears the DMAy Streamx's pending flags.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Parameters

DMA_FLAG	specifies the flag to clear. This parameter can be any combination of the following values: • DMA_FLAG_TCIFx: Streamx transfer complete flag • DMA_FLAG_HTIFx: Streamx half transfer complete flag • DMA_FLAG_TEIFx: Streamx transfer error flag • DMA_FLAG_DMEIFx: Streamx direct mode error flag • DMA_FLAG_FEIFx: Streamx FIFO error flag Where x can be 0 to 7 to select the DMA Stream.

Return values

None	

5.121.2.2 DMA_ClearITPendingBit()

```
void DMA_ClearITPendingBit (
             DMA_Stream_TypeDef * DMAy_Streamx,
             uint32_t DMA_IT )
```

Clears the DMAy Streamx's interrupt pending bits.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_IT	specifies the DMA interrupt pending bit to clear. This parameter can be any combination of the following values: • DMA_IT_TCIFx: Streamx transfer complete interrupt • DMA_IT_HTIFx: Streamx half transfer complete interrupt • DMA_IT_TEIFx: Streamx transfer error interrupt • DMA_IT_DMEIFx: Streamx direct mode error interrupt • DMA_IT_FEIFx: Streamx FIFO error interrupt Where x can be 0 to 7 to select the DMA Stream.

Return values

None	

5.121.2.3 DMA_GetCmdStatus()

```
FunctionalState DMA_GetCmdStatus (
            DMA_Stream_TypeDef * DMAy_Streamx )
```

Returns the status of EN bit for the specified DMAy Streamx.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Note

After configuring the DMA Stream (DMA_Init() function) and enabling the stream, it is recommended to check (or wait until) the DMA Stream is effectively enabled. A Stream may remain disabled if a configuration parameter is wrong. After disabling a DMA Stream, it is also recommended to check (or wait until) the DMA Stream is effectively disabled. If a Stream is disabled while a data transfer is ongoing, the current data will be transferred and the Stream will be effectively disabled only after the transfer of this single data is finished.

Return values

Current	state of the DMAy Streamx (ENABLE or DISABLE).

5.121.2.4 DMA_GetFIFOStatus()

```
uint32_t DMA_GetFIFOStatus (
            DMA_Stream_TypeDef * DMAy_Streamx )
```

Returns the current DMAy Streamx FIFO filled level.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.

Return values

The	FIFO filling state. • DMA_FIFOStatus_Less1QuarterFull: when FIFO is less than 1 quarter-full and not empty. • DMA_FIFOStatus_1QuarterFull: if more than 1 quarter-full. • DMA_FIFOStatus_HalfFull: if more than 1 half-full. • DMA_FIFOStatus_3QuartersFull: if more than 3 quarters-full. • DMA_FIFOStatus_Empty: when FIFO is empty • DMA_FIFOStatus_Full: when FIFO is full

5.121.2.5 DMA_GetFlagStatus()

```
FlagStatus DMA_GetFlagStatus (
            DMA_Stream_TypeDef * DMAy_Streamx,
            uint32_t DMA_FLAG )
```

Checks whether the specified DMAy Streamx flag is set or not.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_FLAG	specifies the flag to check. This parameter can be one of the following values: • DMA_FLAG_TCIFx: Streamx transfer complete flag • DMA_FLAG_HTIFx: Streamx half transfer complete flag • DMA_FLAG_TEIFx: Streamx transfer error flag • DMA_FLAG_DMEIFx: Streamx direct mode error flag • DMA_FLAG_FEIFx: Streamx FIFO error flag Where x can be 0 to 7 to select the DMA Stream.

Return values

The	new state of DMA_FLAG (SET or RESET).

5.121.2.6 DMA_GetITStatus()

```
ITStatus DMA_GetITStatus (
            DMA_Stream_TypeDef * DMAy_Streamx,
            uint32_t DMA_IT )
```

Checks whether the specified DMAy Streamx interrupt has occurred or not.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_IT	specifies the DMA interrupt source to check. This parameter can be one of the following values: • DMA_IT_TCIFx: Streamx transfer complete interrupt • DMA_IT_HTIFx: Streamx half transfer complete interrupt • DMA_IT_TEIFx: Streamx transfer error interrupt • DMA_IT_DMEIFx: Streamx direct mode error interrupt • DMA_IT_FEIFx: Streamx FIFO error interrupt Where x can be 0 to 7 to select the DMA Stream.

Return values

The	new state of DMA_IT (SET or RESET).

5.121.2.7 DMA_ITConfig()

```
void DMA_ITConfig (
            DMA_Stream_TypeDef * DMAy_Streamx,
            uint32_t DMA_IT,
            FunctionalState NewState )
```

Enables or disables the specified DMAy Streamx interrupts.

Parameters

DMAy_Streamx	where y can be 1 or 2 to select the DMA and x can be 0 to 7 to select the DMA Stream.
DMA_IT	specifies the DMA interrupt sources to be enabled or disabled. This parameter can be any combination of the following values: • DMA_IT_TC: Transfer complete interrupt mask • DMA_IT_HT: Half transfer complete interrupt mask • DMA_IT_TE: Transfer error interrupt mask • DMA_IT_FE: FIFO error interrupt mask
NewState	new state of the specified DMA interrupts. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.122 GPIO

GPIO driver modules.

Modules

- GPIO_Exported_Constants
- GPIO_Private_Functions

Data Structures

- struct GPIO_InitTypeDef

  GPIO Init structure definition

Macros

- #define IS_GPIO_ALL_PERIPH(PERIPH)
- #define IS_GPIO_MODE(MODE)
- #define **IS_GPIO_OTYPE**(OTYPE) (((OTYPE) == GPIO_OType_PP) || ((OTYPE) == GPIO_OType_OD))

  GPIO Configuration PullUp PullDown enumeration.
- enum BitAction { **Bit_RESET** = 0 , **Bit_SET** }

  GPIO Bit SET and Bit RESET enumeration.

Functions

- void GPIO_DeInit (GPIO_TypeDef *GPIOx)

  Deinitializes the GPIOx peripheral registers to their default reset values.
- void GPIO_Init (GPIO_TypeDef *GPIOx, GPIO_InitTypeDef *GPIO_InitStruct)

  Initializes the GPIOx peripheral according to the specified parameters in the GPIO_InitStruct.
- void GPIO_StructInit (GPIO_InitTypeDef *GPIO_InitStruct)

  Fills each GPIO_InitStruct member with its default value.
- void GPIO_PinLockConfig (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Locks GPIO Pins configuration registers.
- uint8_t GPIO_ReadInputDataBit (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Reads the specified input port pin.
- uint16_t GPIO_ReadInputData (GPIO_TypeDef *GPIOx)

  Reads the specified GPIO input data port.
- uint8_t GPIO_ReadOutputDataBit (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Reads the specified output data port bit.
- uint16_t GPIO_ReadOutputData (GPIO_TypeDef *GPIOx)

  Reads the specified GPIO output data port.
- void GPIO_SetBits (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Sets the selected data port bits.
- void GPIO_ResetBits (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Clears the selected data port bits.
- void GPIO_WriteBit (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin, BitAction BitVal)

  Sets or clears the selected data port bit.
- void GPIO_Write (GPIO_TypeDef *GPIOx, uint16_t PortVal)

  Writes data to the specified GPIO data port.
- void GPIO_ToggleBits (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Toggles the specified GPIO pins..
- void GPIO_PinAFConfig (GPIO_TypeDef *GPIOx, uint16_t GPIO_PinSource, uint8_t GPIO_AF)

  Changes the mapping of the specified pin.

              PUPD )
```

Value:

```
(((PUPD) == GPIO_PuPd_NOPULL) || ((PUPD) == GPIO_PuPd_UP) || \
((PUPD) == GPIO_PuPd_DOWN))
```

5.122.2.4 IS_GPIO_SPEED

```
#define IS_GPIO_SPEED(
              SPEED )
```

Value:

```
(((SPEED) == GPIO_Speed_2MHz) || ((SPEED) == GPIO_Speed_25MHz) || \
((SPEED) == GPIO_Speed_50MHz)||  ((SPEED) == GPIO_Speed_100MHz))
```

5.122.3 Enumeration Type Documentation

5.122.3.1 GPIOMode_TypeDef

```
enum GPIOMode_TypeDef
```

GPIO Configuration Mode enumeration.

Enumerator

GPIO_Mode_IN	GPIO Input Mode
GPIO_Mode_OUT	GPIO Output Mode
GPIO_Mode_AF	GPIO Alternate function Mode
GPIO_Mode_AN	GPIO Analog Mode

5.122.3.2 GPIOSpeed_TypeDef

```
enum GPIOSpeed_TypeDef
```

GPIO Output Maximum frequency enumeration.

Enumerator

GPIO_Speed_2MHz	Low speed
GPIO_Speed_25MHz	Medium speed
GPIO_Speed_50MHz	Fast speed
GPIO_Speed_100MHz	High speed on 30 pF (80 MHz Output max speed on 15 pF)

5.122.4 Function Documentation

5.122.4.1 GPIO_DeInit()

```
void GPIO_DeInit (
            GPIO_TypeDef * GPIOx )
```

Deinitializes the GPIOx peripheral registers to their default reset values.

Note

By default, The GPIO pins are configured in input floating mode (except JTAG pins).

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.

Return values

None	

5.122.4.2 GPIO_Init()

```
void GPIO_Init (
            GPIO_TypeDef * GPIOx,
            GPIO_InitTypeDef * GPIO_InitStruct )
```

Initializes the GPIOx peripheral according to the specified parameters in the GPIO_InitStruct.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_InitStruct	pointer to a GPIO_InitTypeDef structure that contains the configuration information for the specified GPIO peripheral.

Return values

None	

5.122.4.3 GPIO_PinAFConfig()

```
void GPIO_PinAFConfig (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_PinSource,
            uint8_t GPIO_AF )
```

Changes the mapping of the specified pin.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_PinSource	specifies the pin for the Alternate function. This parameter can be GPIO_PinSourcex where x can be (0..15).

Parameters

GPIO_AFSelection	selects the pin to used as Alternate function. This parameter can be one of the following values: • GPIO_AF_RTC_50Hz: Connect RTC_50Hz pin to AF0 (default after reset) • GPIO_AF_MCO: Connect MCO pin (MCO1 and MCO2) to AF0 (default after reset) • GPIO_AF_TAMPER: Connect TAMPER pins (TAMPER_1 and TAMPER_2) to AF0 (default after reset) • GPIO_AF_SWJ: Connect SWJ pins (SWD and JTAG)to AF0 (default after reset) • GPIO_AF_TRACE: Connect TRACE pins to AF0 (default after reset) • GPIO_AF_TIM1: Connect TIM1 pins to AF1 • GPIO_AF_TIM2: Connect TIM2 pins to AF1 • GPIO_AF_TIM3: Connect TIM3 pins to AF2 • GPIO_AF_TIM4: Connect TIM4 pins to AF2 • GPIO_AF_TIM5: Connect TIM5 pins to AF2 • GPIO_AF_TIM8: Connect TIM8 pins to AF3 • GPIO_AF_TIM9: Connect TIM9 pins to AF3 • GPIO_AF_TIM10: Connect TIM10 pins to AF3 • GPIO_AF_TIM11: Connect TIM11 pins to AF3 • GPIO_AF_I2C1: Connect I2C1 pins to AF4 • GPIO_AF_I2C2: Connect I2C2 pins to AF4 • GPIO_AF_I2C3: Connect I2C3 pins to AF4 • GPIO_AF_SPI1: Connect SPI1 pins to AF5 • GPIO_AF_SPI2: Connect SPI2/I2S2 pins to AF5 • GPIO_AF_SPI3: Connect SPI3/I2S3 pins to AF6 • GPIO_AF_I2S3ext: Connect I2S3ext pins to AF7 • GPIO_AF_USART1: Connect USART1 pins to AF7 • GPIO_AF_USART2: Connect USART2 pins to AF7 • GPIO_AF_USART3: Connect USART3 pins to AF7 • GPIO_AF_UART4: Connect UART4 pins to AF8 • GPIO_AF_UART5: Connect UART5 pins to AF8 • GPIO_AF_USART6: Connect USART6 pins to AF8 • GPIO_AF_CAN1: Connect CAN1 pins to AF9 • GPIO_AF_CAN2: Connect CAN2 pins to AF9 • GPIO_AF_TIM12: Connect TIM12 pins to AF9 • GPIO_AF_TIM13: Connect TIM13 pins to AF9 • GPIO_AF_TIM14: Connect TIM14 pins to AF9 • GPIO_AF_OTG_FS: Connect OTG_FS pins to AF10
Generated by Doxygen	• GPIO_AF_OTG_HS: Connect OTG_HS pins to AF10 • GPIO_AF_ETH: Connect ETHERNET pins to AF11 • GPIO_AF_FSMC: Connect FSMC pins to AF12

Parameters

Return values

None	

5.122.4.4 GPIO_PinLockConfig()

```
void GPIO_PinLockConfig (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Locks GPIO Pins configuration registers.

Note

The locked registers are GPIOx_MODER, GPIOx_OTYPER, GPIOx_OSPEEDR, GPIOx_PUPDR, GPIOx_↩ AFRL and GPIOx_AFRH.

The configuration of the locked GPIO pins can no longer be modified until the next reset.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bit to be locked. This parameter can be any combination of GPIO_Pin_x where x can be (0..15).

Return values

None	

5.122.4.5 GPIO_ReadInputData()

```
uint16_t GPIO_ReadInputData (
            GPIO_TypeDef * GPIOx )
```

Reads the specified GPIO input data port.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.

Return values

GPIO	input data port value.

5.122.4.6 GPIO_ReadInputDataBit()

```
uint8_t GPIO_ReadInputDataBit (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Reads the specified input port pin.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bit to read. This parameter can be GPIO_Pin_x where x can be (0..15).

Return values

The	input port pin value.

5.122.4.7 GPIO_ReadOutputData()

```
uint16_t GPIO_ReadOutputData (
            GPIO_TypeDef * GPIOx )
```

Reads the specified GPIO output data port.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.

Return values

GPIO	output data port value.

5.122.4.8 GPIO_ReadOutputDataBit()

```
uint8_t GPIO_ReadOutputDataBit (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Reads the specified output data port bit.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bit to read. This parameter can be GPIO_Pin_x where x can be (0..15).

Return values

The	output port pin value.

5.122.4.9 GPIO_ResetBits()

```
void GPIO_ResetBits (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Clears the selected data port bits.

Note

This functions uses GPIOx_BSRR register to allow atomic read/modify accesses. In this way, there is no risk of an IRQ occurring between the read and the modify access.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bits to be written. This parameter can be any combination of GPIO_Pin_x where x can be (0..15).

Return values

None	

5.122.4.10 GPIO_SetBits()

```
void GPIO_SetBits (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Sets the selected data port bits.

Note

This functions uses GPIOx_BSRR register to allow atomic read/modify accesses. In this way, there is no risk of an IRQ occurring between the read and the modify access.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bits to be written. This parameter can be any combination of GPIO_Pin_x where x can be (0..15).

Return values

None	

5.122.4.11 GPIO_StructInit()

```
void GPIO_StructInit (
            GPIO_InitTypeDef * GPIO_InitStruct )
```

Fills each GPIO_InitStruct member with its default value.

Parameters

GPIO_InitStruct	: pointer to a GPIO_InitTypeDef structure which will be initialized.

Return values

None	

5.122.4.12 GPIO_ToggleBits()

```
void GPIO_ToggleBits (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Toggles the specified GPIO pins..

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	Specifies the pins to be toggled.

Return values

None	

5.122.4.13 GPIO_Write()

```
void GPIO_Write (
            GPIO_TypeDef * GPIOx,
            uint16_t PortVal )
```

Writes data to the specified GPIO data port.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
PortVal	specifies the value to be written to the port output data register.

Return values

None	

5.122.4.14 GPIO_WriteBit()

```
void GPIO_WriteBit (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin,
            BitAction BitVal )
```

Sets or clears the selected data port bit.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bit to be written. This parameter can be one of GPIO_Pin_x where x can be (0..15).
BitVal	specifies the value to be written to the selected bit. This parameter can be one of the BitAction enum values: • Bit_RESET: to clear the port pin • Bit_SET: to set the port pin

Return values

None	

5.123 GPIO_Private_Functions

Modules

- Initialization and Configuration

Initialization and Configuration.

- GPIO Read and Write

  GPIO Read and Write.

- GPIO Alternate functions configuration function

  GPIO Alternate functions configuration function.

5.123.1 Detailed Description

5.124 Initialization and Configuration

Initialization and Configuration.

Functions

- void GPIO_DeInit (GPIO_TypeDef *GPIOx)

  Deinitializes the GPIOx peripheral registers to their default reset values.

- void GPIO_Init (GPIO_TypeDef *GPIOx, GPIO_InitTypeDef *GPIO_InitStruct)

  Initializes the GPIOx peripheral according to the specified parameters in the GPIO_InitStruct.

- void GPIO_StructInit (GPIO_InitTypeDef *GPIO_InitStruct)

  Fills each GPIO_InitStruct member with its default value.

- void GPIO_PinLockConfig (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Locks GPIO Pins configuration registers.

5.124.1 Detailed Description

Initialization and Configuration.

```

                        Initialization and Configuration
 ===========================================================================
```

5.124.2 Function Documentation

5.124.2.1 GPIO_DeInit()

```
void GPIO_DeInit (
            GPIO_TypeDef * GPIOx )
```

Deinitializes the GPIOx peripheral registers to their default reset values.

Note

By default, The GPIO pins are configured in input floating mode (except JTAG pins).

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.

Return values

None	

5.124.2.2 GPIO_Init()

```
void GPIO_Init (
            GPIO_TypeDef * GPIOx,
            GPIO_InitTypeDef * GPIO_InitStruct )
```

Initializes the GPIOx peripheral according to the specified parameters in the GPIO_InitStruct.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_InitStruct	pointer to a GPIO_InitTypeDef structure that contains the configuration information for the specified GPIO peripheral.

Return values

None	

5.124.2.3 GPIO_PinLockConfig()

```
void GPIO_PinLockConfig (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Locks GPIO Pins configuration registers.

Note

The locked registers are GPIOx_MODER, GPIOx_OTYPER, GPIOx_OSPEEDR, GPIOx_PUPDR, GPIOx_↩ AFRL and GPIOx_AFRH.

The configuration of the locked GPIO pins can no longer be modified until the next reset.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bit to be locked. This parameter can be any combination of GPIO_Pin_x where x can be (0..15).

Return values

None	

5.124.2.4 GPIO_StructInit()

```
void GPIO_StructInit (
            GPIO_InitTypeDef * GPIO_InitStruct )
```

Fills each GPIO_InitStruct member with its default value.

Parameters

GPIO_InitStruct	: pointer to a GPIO_InitTypeDef structure which will be initialized.

Return values

None	

5.125 GPIO Read and Write

GPIO Read and Write.

Functions

- uint8_t GPIO_ReadInputDataBit (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Reads the specified input port pin.
- uint16_t GPIO_ReadInputData (GPIO_TypeDef ∗GPIOx)

  Reads the specified GPIO input data port.
- uint8_t GPIO_ReadOutputDataBit (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Reads the specified output data port bit.
- uint16_t GPIO_ReadOutputData (GPIO_TypeDef ∗GPIOx)

  Reads the specified GPIO output data port.
- void GPIO_SetBits (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Sets the selected data port bits.
- void GPIO_ResetBits (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Clears the selected data port bits.
- void GPIO_WriteBit (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin, BitAction BitVal)

  Sets or clears the selected data port bit.
- void GPIO_Write (GPIO_TypeDef ∗GPIOx, uint16_t PortVal)

  Writes data to the specified GPIO data port.
- void GPIO_ToggleBits (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Toggles the specified GPIO pins..

5.125.1 Detailed Description

GPIO Read and Write.

```
 ===============================================================================
                              GPIO Read and Write
 ===============================================================================
```

5.125.2 Function Documentation

5.125.2.1 GPIO_ReadInputData()

```
uint16_t GPIO_ReadInputData (
             GPIO_TypeDef * GPIOx )
```

Reads the specified GPIO input data port.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.

Return values

GPIO	input data port value.

5.125.2.2 GPIO_ReadInputDataBit()

```
uint8_t GPIO_ReadInputDataBit (
             GPIO_TypeDef * GPIOx,
             uint16_t GPIO_Pin )
```

Reads the specified input port pin.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bit to read. This parameter can be GPIO_Pin_x where x can be (0..15).

Return values

The	input port pin value.

5.125.2.3 GPIO_ReadOutputData()

```
uint16_t GPIO_ReadOutputData (
            GPIO_TypeDef * GPIOx )
```

Reads the specified GPIO output data port.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.

Return values

GPIO	output data port value.

5.125.2.4 GPIO_ReadOutputDataBit()

```
uint8_t GPIO_ReadOutputDataBit (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Reads the specified output data port bit.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bit to read. This parameter can be GPIO_Pin_x where x can be (0..15).

Return values

The	output port pin value.

5.125.2.5 GPIO_ResetBits()

```
void GPIO_ResetBits (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Clears the selected data port bits.

Note

This functions uses GPIOx_BSRR register to allow atomic read/modify accesses. In this way, there is no risk of an IRQ occurring between the read and the modify access.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bits to be written. This parameter can be any combination of GPIO_Pin_x where x can be (0..15).

Return values

None	

5.125.2.6 GPIO_SetBits()

```
void GPIO_SetBits (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Sets the selected data port bits.

Note

This functions uses GPIOx_BSRR register to allow atomic read/modify accesses. In this way, there is no risk of an IRQ occurring between the read and the modify access.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bits to be written. This parameter can be any combination of GPIO_Pin_x where x can be (0..15).

Return values

None	

5.125.2.7 GPIO_ToggleBits()

```
void GPIO_ToggleBits (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin )
```

Toggles the specified GPIO pins..

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	Specifies the pins to be toggled.

Return values

None	

5.125.2.8 GPIO_Write()

```
void GPIO_Write (
            GPIO_TypeDef * GPIOx,
            uint16_t PortVal )
```

Writes data to the specified GPIO data port.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
PortVal	specifies the value to be written to the port output data register.

Return values

None	

5.125.2.9 GPIO_WriteBit()

```
void GPIO_WriteBit (
            GPIO_TypeDef * GPIOx,
            uint16_t GPIO_Pin,
            BitAction BitVal )
```

Sets or clears the selected data port bit.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_Pin	specifies the port bit to be written. This parameter can be one of GPIO_Pin_x where x can be (0..15).
BitVal	specifies the value to be written to the selected bit. This parameter can be one of the BitAction enum values: • Bit_RESET: to clear the port pin • Bit_SET: to set the port pin

Return values

None	

5.126 GPIO Alternate functions configuration function

GPIO Alternate functions configuration function.

Functions

- void GPIO_PinAFConfig (GPIO_TypeDef *GPIOx, uint16_t GPIO_PinSource, uint8_t GPIO_AF)

  Changes the mapping of the specified pin.

5.126.1 Detailed Description

GPIO Alternate functions configuration function.

```
 ===============================================================================
               GPIO Alternate functions configuration function
 ===============================================================================
```

5.126.2 Function Documentation

5.126.2.1 GPIO_PinAFConfig()

```
void GPIO_PinAFConfig (
             GPIO_TypeDef * GPIOx,
             uint16_t GPIO_PinSource,
             uint8_t GPIO_AF )
```

Changes the mapping of the specified pin.

Parameters

GPIOx	where x can be (A..I) to select the GPIO peripheral.
GPIO_PinSource	specifies the pin for the Alternate function. This parameter can be GPIO_PinSourcex where x can be (0..15).

Parameters

GPIO_AFSelection	selects the pin to used as Alternate function. This parameter can be one of the following values: • GPIO_AF_RTC_50Hz: Connect RTC_50Hz pin to AF0 (default after reset) • GPIO_AF_MCO: Connect MCO pin (MCO1 and MCO2) to AF0 (default after reset) • GPIO_AF_TAMPER: Connect TAMPER pins (TAMPER_1 and TAMPER_2) to AF0 (default after reset) • GPIO_AF_SWJ: Connect SWJ pins (SWD and JTAG)to AF0 (default after reset) • GPIO_AF_TRACE: Connect TRACE pins to AF0 (default after reset) • GPIO_AF_TIM1: Connect TIM1 pins to AF1 • GPIO_AF_TIM2: Connect TIM2 pins to AF1 • GPIO_AF_TIM3: Connect TIM3 pins to AF2 • GPIO_AF_TIM4: Connect TIM4 pins to AF2 • GPIO_AF_TIM5: Connect TIM5 pins to AF2 • GPIO_AF_TIM8: Connect TIM8 pins to AF3 • GPIO_AF_TIM9: Connect TIM9 pins to AF3 • GPIO_AF_TIM10: Connect TIM10 pins to AF3 • GPIO_AF_TIM11: Connect TIM11 pins to AF3 • GPIO_AF_I2C1: Connect I2C1 pins to AF4 • GPIO_AF_I2C2: Connect I2C2 pins to AF4 • GPIO_AF_I2C3: Connect I2C3 pins to AF4 • GPIO_AF_SPI1: Connect SPI1 pins to AF5 • GPIO_AF_SPI2: Connect SPI2/I2S2 pins to AF5 • GPIO_AF_SPI3: Connect SPI3/I2S3 pins to AF6 • GPIO_AF_I2S3ext: Connect I2S3ext pins to AF7 • GPIO_AF_USART1: Connect USART1 pins to AF7 • GPIO_AF_USART2: Connect USART2 pins to AF7 • GPIO_AF_USART3: Connect USART3 pins to AF7 • GPIO_AF_UART4: Connect UART4 pins to AF8 • GPIO_AF_UART5: Connect UART5 pins to AF8 • GPIO_AF_USART6: Connect USART6 pins to AF8 • GPIO_AF_CAN1: Connect CAN1 pins to AF9 • GPIO_AF_CAN2: Connect CAN2 pins to AF9 • GPIO_AF_TIM12: Connect TIM12 pins to AF9 • GPIO_AF_TIM13: Connect TIM13 pins to AF9 • GPIO_AF_TIM14: Connect TIM14 pins to AF9 • GPIO_AF_OTG_FS: Connect OTG_FS pins to AF10
	• GPIO_AF_OTG_HS: Connect OTG_HS pins to AF10 • GPIO_AF_ETH: Connect ETHERNET pins to AF11 • GPIO_AF_FSMC: Connect FSMC pins to AF12

Parameters

Return values

None	

5.127 RCC

RCC driver modules.

Functions

- void RCC_DeInit (void)

  Resets the RCC clock configuration to the default reset state.
- void RCC_HSEConfig (uint8_t RCC_HSE)

  Configures the External High Speed oscillator (HSE).
- ErrorStatus RCC_WaitForHSEStartUp (void)

  Waits for HSE start-up.
- void RCC_AdjustHSICalibrationValue (uint8_t HSICalibrationValue)

  Adjusts the Internal High Speed oscillator (HSI) calibration value.
- void RCC_HSICmd (FunctionalState NewState)

  Enables or disables the Internal High Speed oscillator (HSI).
- void RCC_LSEConfig (uint8_t RCC_LSE)

  Configures the External Low Speed oscillator (LSE).
- void RCC_LSICmd (FunctionalState NewState)

  Enables or disables the Internal Low Speed oscillator (LSI).
- void RCC_PLLConfig (uint32_t RCC_PLLSource, uint32_t PLLM, uint32_t PLLN, uint32_t PLLP, uint32_t PLLQ)

  Configures the main PLL clock source, multiplication and division factors.
- void RCC_PLLCmd (FunctionalState NewState)

  Enables or disables the main PLL.
- void RCC_PLLI2SConfig (uint32_t PLLI2SN, uint32_t PLLI2SR)

  Configures the PLLI2S clock multiplication and division factors.
- void RCC_PLLI2SCmd (FunctionalState NewState)

  Enables or disables the PLLI2S.
- void RCC_ClockSecuritySystemCmd (FunctionalState NewState)

  Enables or disables the Clock Security System.
- void RCC_MCO1Config (uint32_t RCC_MCO1Source, uint32_t RCC_MCO1Div)

  Selects the clock source to output on MCO1 pin(PA8).
- void RCC_MCO2Config (uint32_t RCC_MCO2Source, uint32_t RCC_MCO2Div)

  Selects the clock source to output on MCO2 pin(PC9).
- void RCC_SYSCLKConfig (uint32_t RCC_SYSCLKSource)

  Configures the system clock (SYSCLK).
- uint8_t RCC_GetSYSCLKSource (void)

  Returns the clock source used as system clock.
- void RCC_HCLKConfig (uint32_t RCC_SYSCLK)

  Configures the AHB clock (HCLK).
- void RCC_PCLK1Config (uint32_t RCC_HCLK)

  Configures the Low Speed APB clock (PCLK1).
- void RCC_PCLK2Config (uint32_t RCC_HCLK)

  Configures the High Speed APB clock (PCLK2).
- void RCC_GetClocksFreq (RCC_ClocksTypeDef *RCC_Clocks)

  Returns the frequencies of different on chip clocks; SYSCLK, HCLK, PCLK1 and PCLK2.
- void RCC_RTCCLKConfig (uint32_t RCC_RTCCLKSource)

  Configures the RTC clock (RTCCLK).
- void RCC_RTCCLKCmd (FunctionalState NewState)

  Enables or disables the RTC clock.
- void RCC_BackupResetCmd (FunctionalState NewState)

  Forces or releases the Backup domain reset.
- void RCC_I2SCLKConfig (uint32_t RCC_I2SCLKSource)

Configures the I2S clock source (I2SCLK).

- void RCC_AHB1PeriphClockCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Enables or disables the AHB1 peripheral clock.
- void RCC_AHB2PeriphClockCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Enables or disables the AHB2 peripheral clock.
- void RCC_AHB3PeriphClockCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Enables or disables the AHB3 peripheral clock.
- void RCC_APB1PeriphClockCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Enables or disables the Low Speed APB (APB1) peripheral clock.
- void RCC_APB2PeriphClockCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Enables or disables the High Speed APB (APB2) peripheral clock.
- void RCC_AHB1PeriphResetCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Forces or releases AHB1 peripheral reset.
- void RCC_AHB2PeriphResetCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Forces or releases AHB2 peripheral reset.
- void RCC_AHB3PeriphResetCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Forces or releases AHB3 peripheral reset.
- void RCC_APB1PeriphResetCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Forces or releases Low Speed APB (APB1) peripheral reset.
- void RCC_APB2PeriphResetCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Forces or releases High Speed APB (APB2) peripheral reset.
- void RCC_AHB1PeriphClockLPModeCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Enables or disables the AHB1 peripheral clock during Low Power (Sleep) mode.
- void RCC_AHB2PeriphClockLPModeCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Enables or disables the AHB2 peripheral clock during Low Power (Sleep) mode.
- void RCC_AHB3PeriphClockLPModeCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Enables or disables the AHB3 peripheral clock during Low Power (Sleep) mode.
- void RCC_APB1PeriphClockLPModeCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Enables or disables the APB1 peripheral clock during Low Power (Sleep) mode.
- void RCC_APB2PeriphClockLPModeCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Enables or disables the APB2 peripheral clock during Low Power (Sleep) mode.
- void RCC_ITConfig (uint8_t RCC_IT, FunctionalState NewState)

  Enables or disables the specified RCC interrupts.
- FlagStatus RCC_GetFlagStatus (uint8_t RCC_FLAG)

  Checks whether the specified RCC flag is set or not.
- void RCC_ClearFlag (void)

  Clears the RCC reset flags. The reset flags are: RCC_FLAG_PINRST, RCC_FLAG_PORRST, RCC_FLAG_SFTRST, RCC_FLAG_IWDGRST, RCC_FLAG_WWDGRST, RCC_FLAG_LPWRRST.
- ITStatus RCC_GetITStatus (uint8_t RCC_IT)

  Checks whether the specified RCC interrupt has occurred or not.
- void RCC_ClearITPendingBit (uint8_t RCC_IT)

  Clears the RCC's interrupt pending bits.

5.127.1 Detailed Description

RCC driver modules.

5.127.2 Function Documentation

5.127.2.1 RCC_AdjustHSICalibrationValue()

```
void RCC_AdjustHSICalibrationValue (
            uint8_t HSICalibrationValue )
```

Adjusts the Internal High Speed oscillator (HSI) calibration value.

Note

The calibration is used to compensate for the variations in voltage and temperature that influence the frequency of the internal HSI RC.

Parameters

HSICalibrationValue	specifies the calibration trimming value. This parameter must be a number between 0 and 0x1F.

Return values

None	

5.127.2.2 RCC_AHB1PeriphClockCmd()

```
void RCC_AHB1PeriphClockCmd (
            uint32_t RCC_AHB1Periph,
            FunctionalState NewState )
```

Enables or disables the AHB1 peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_AHBPeriph	specifies the AHB1 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_AHB1Periph_GPIOA: GPIOA clock • RCC_AHB1Periph_GPIOB: GPIOB clock • RCC_AHB1Periph_GPIOC: GPIOC clock • RCC_AHB1Periph_GPIOD: GPIOD clock • RCC_AHB1Periph_GPIOE: GPIOE clock • RCC_AHB1Periph_GPIOF: GPIOF clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOI: GPIOI clock • RCC_AHB1Periph_CRC: CRC clock • RCC_AHB1Periph_BKPSRAM: BKPSRAM interface clock • RCC_AHB1Periph_CCMDATARAMEN CCM data RAM interface clock • RCC_AHB1Periph_DMA1: DMA1 clock • RCC_AHB1Periph_DMA2: DMA2 clock • RCC_AHB1Periph_ETH_MAC: Ethernet MAC clock • RCC_AHB1Periph_ETH_MAC_Tx: Ethernet Transmission clock • RCC_AHB1Periph_ETH_MAC_Rx: Ethernet Reception clock • RCC_AHB1Periph_ETH_MAC_PTP: Ethernet PTP clock • RCC_AHB1Periph_OTG_HS: USB OTG HS clock • RCC_AHB1Periph_OTG_HS_ULPI: USB OTG HS ULPI clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.3 RCC_AHB1PeriphClockLPModeCmd()

```
void RCC_AHB1PeriphClockLPModeCmd (
             uint32_t RCC_AHB1Periph,
             FunctionalState NewState )
```

Enables or disables the AHB1 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_AHBPeriph	specifies the AHB1 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_AHB1Periph_GPIOA: GPIOA clock • RCC_AHB1Periph_GPIOB: GPIOB clock • RCC_AHB1Periph_GPIOC: GPIOC clock • RCC_AHB1Periph_GPIOD: GPIOD clock • RCC_AHB1Periph_GPIOE: GPIOE clock • RCC_AHB1Periph_GPIOF: GPIOF clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOI: GPIOI clock • RCC_AHB1Periph_CRC: CRC clock • RCC_AHB1Periph_BKPSRAM: BKPSRAM interface clock • RCC_AHB1Periph_DMA1: DMA1 clock • RCC_AHB1Periph_DMA2: DMA2 clock • RCC_AHB1Periph_ETH_MAC: Ethernet MAC clock • RCC_AHB1Periph_ETH_MAC_Tx: Ethernet Transmission clock • RCC_AHB1Periph_ETH_MAC_Rx: Ethernet Reception clock • RCC_AHB1Periph_ETH_MAC_PTP: Ethernet PTP clock • RCC_AHB1Periph_OTG_HS: USB OTG HS clock • RCC_AHB1Periph_OTG_HS_ULPI: USB OTG HS ULPI clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.4 RCC_AHB1PeriphResetCmd()

```
void RCC_AHB1PeriphResetCmd (
            uint32_t RCC_AHB1Periph,
            FunctionalState NewState )
```

Forces or releases AHB1 peripheral reset.

Parameters

RCC_AHB1Periph	specifies the AHB1 peripheral to reset. This parameter can be any combination of the following values: • RCC_AHB1Periph_GPIOA: GPIOA clock • RCC_AHB1Periph_GPIOB: GPIOB clock • RCC_AHB1Periph_GPIOC: GPIOC clock • RCC_AHB1Periph_GPIOD: GPIOD clock • RCC_AHB1Periph_GPIOE: GPIOE clock • RCC_AHB1Periph_GPIOF: GPIOF clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOI: GPIOI clock • RCC_AHB1Periph_CRC: CRC clock • RCC_AHB1Periph_DMA1: DMA1 clock • RCC_AHB1Periph_DMA2: DMA2 clock • RCC_AHB1Periph_ETH_MAC: Ethernet MAC clock • RCC_AHB1Periph_OTG_HS: USB OTG HS clock
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.5 RCC_AHB2PeriphClockCmd()

```
void RCC_AHB2PeriphClockCmd (
             uint32_t RCC_AHB2Periph,
             FunctionalState NewState )
```

Enables or disables the AHB2 peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_AHBPeriph	specifies the AHB2 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_AHB2Periph_DCMI: DCMI clock • RCC_AHB2Periph_CRYP: CRYP clock • RCC_AHB2Periph_HASH: HASH clock • RCC_AHB2Periph_RNG: RNG clock • RCC_AHB2Periph_OTG_FS: USB OTG FS clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.6 RCC_AHB2PeriphClockLPModeCmd()

```
void RCC_AHB2PeriphClockLPModeCmd (
             uint32_t RCC_AHB2Periph,
             FunctionalState NewState )
```

Enables or disables the AHB2 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_AHBPeriph	specifies the AHB2 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_AHB2Periph_DCMI: DCMI clock • RCC_AHB2Periph_CRYP: CRYP clock • RCC_AHB2Periph_HASH: HASH clock • RCC_AHB2Periph_RNG: RNG clock • RCC_AHB2Periph_OTG_FS: USB OTG FS clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.7 RCC_AHB2PeriphResetCmd()

```
void RCC_AHB2PeriphResetCmd (
            uint32_t RCC_AHB2Periph,
            FunctionalState NewState )
```

Forces or releases AHB2 peripheral reset.

Parameters

RCC_AHB2Periph	specifies the AHB2 peripheral to reset. This parameter can be any combination of the following values: • RCC_AHB2Periph_DCMI: DCMI clock • RCC_AHB2Periph_CRYP: CRYP clock • RCC_AHB2Periph_HASH: HASH clock • RCC_AHB2Periph_RNG: RNG clock • RCC_AHB2Periph_OTG_FS: USB OTG FS clock
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.8 RCC_AHB3PeriphClockCmd()

```
void RCC_AHB3PeriphClockCmd (
            uint32_t RCC_AHB3Periph,
            FunctionalState NewState )
```

Enables or disables the AHB3 peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_AHBPeriph	specifies the AHB3 peripheral to gates its clock. This parameter must be: RCC_AHB3Periph_FSMC
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.9 RCC_AHB3PeriphClockLPModeCmd()

```
void RCC_AHB3PeriphClockLPModeCmd (
             uint32_t RCC_AHB3Periph,
             FunctionalState NewState )
```

Enables or disables the AHB3 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_AHBPeriph	specifies the AHB3 peripheral to gates its clock. This parameter must be: RCC_AHB3Periph_FSMC
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.10 RCC_AHB3PeriphResetCmd()

```
void RCC_AHB3PeriphResetCmd (
             uint32_t RCC_AHB3Periph,
             FunctionalState NewState )
```

Forces or releases AHB3 peripheral reset.

Parameters

RCC_AHB3Periph	specifies the AHB3 peripheral to reset. This parameter must be: RCC_AHB3Periph_FSMC
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.11 RCC_APB1PeriphClockCmd()

```
void RCC_APB1PeriphClockCmd (
             uint32_t RCC_APB1Periph,
             FunctionalState NewState )
```

Enables or disables the Low Speed APB (APB1) peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_APB1Periph	specifies the APB1 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_APB1Periph_TIM2: TIM2 clock • RCC_APB1Periph_TIM3: TIM3 clock • RCC_APB1Periph_TIM4: TIM4 clock • RCC_APB1Periph_TIM5: TIM5 clock • RCC_APB1Periph_TIM6: TIM6 clock • RCC_APB1Periph_TIM7: TIM7 clock • RCC_APB1Periph_TIM12: TIM12 clock • RCC_APB1Periph_TIM13: TIM13 clock • RCC_APB1Periph_TIM14: TIM14 clock • RCC_APB1Periph_WWDG: WWDG clock • RCC_APB1Periph_SPI2: SPI2 clock • RCC_APB1Periph_SPI3: SPI3 clock • RCC_APB1Periph_USART2: USART2 clock • RCC_APB1Periph_USART3: USART3 clock • RCC_APB1Periph_UART4: UART4 clock • RCC_APB1Periph_UART5: UART5 clock • RCC_APB1Periph_I2C1: I2C1 clock • RCC_APB1Periph_I2C2: I2C2 clock • RCC_APB1Periph_I2C3: I2C3 clock • RCC_APB1Periph_CAN1: CAN1 clock • RCC_APB1Periph_CAN2: CAN2 clock • RCC_APB1Periph_PWR: PWR clock • RCC_APB1Periph_DAC: DAC clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.12 RCC_APB1PeriphClockLPModeCmd()

```
void RCC_APB1PeriphClockLPModeCmd (
            uint32_t RCC_APB1Periph,
            FunctionalState NewState )
```

Enables or disables the APB1 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_APB1Periph	specifies the APB1 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_APB1Periph_TIM2: TIM2 clock • RCC_APB1Periph_TIM3: TIM3 clock • RCC_APB1Periph_TIM4: TIM4 clock • RCC_APB1Periph_TIM5: TIM5 clock • RCC_APB1Periph_TIM6: TIM6 clock • RCC_APB1Periph_TIM7: TIM7 clock • RCC_APB1Periph_TIM12: TIM12 clock • RCC_APB1Periph_TIM13: TIM13 clock • RCC_APB1Periph_TIM14: TIM14 clock • RCC_APB1Periph_WWDG: WWDG clock • RCC_APB1Periph_SPI2: SPI2 clock • RCC_APB1Periph_SPI3: SPI3 clock • RCC_APB1Periph_USART2: USART2 clock • RCC_APB1Periph_USART3: USART3 clock • RCC_APB1Periph_UART4: UART4 clock • RCC_APB1Periph_UART5: UART5 clock • RCC_APB1Periph_I2C1: I2C1 clock • RCC_APB1Periph_I2C2: I2C2 clock • RCC_APB1Periph_I2C3: I2C3 clock • RCC_APB1Periph_CAN1: CAN1 clock • RCC_APB1Periph_CAN2: CAN2 clock • RCC_APB1Periph_PWR: PWR clock • RCC_APB1Periph_DAC: DAC clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.13 RCC_APB1PeriphResetCmd()

```
void RCC_APB1PeriphResetCmd (
            uint32_t RCC_APB1Periph,
            FunctionalState NewState )
```

Forces or releases Low Speed APB (APB1) peripheral reset.

Parameters

RCC_APB1Periph	specifies the APB1 peripheral to reset. This parameter can be any combination of the following values: • RCC_APB1Periph_TIM2: TIM2 clock • RCC_APB1Periph_TIM3: TIM3 clock • RCC_APB1Periph_TIM4: TIM4 clock • RCC_APB1Periph_TIM5: TIM5 clock • RCC_APB1Periph_TIM6: TIM6 clock • RCC_APB1Periph_TIM7: TIM7 clock • RCC_APB1Periph_TIM12: TIM12 clock • RCC_APB1Periph_TIM13: TIM13 clock • RCC_APB1Periph_TIM14: TIM14 clock • RCC_APB1Periph_WWDG: WWDG clock • RCC_APB1Periph_SPI2: SPI2 clock • RCC_APB1Periph_SPI3: SPI3 clock • RCC_APB1Periph_USART2: USART2 clock • RCC_APB1Periph_USART3: USART3 clock • RCC_APB1Periph_UART4: UART4 clock • RCC_APB1Periph_UART5: UART5 clock • RCC_APB1Periph_I2C1: I2C1 clock • RCC_APB1Periph_I2C2: I2C2 clock • RCC_APB1Periph_I2C3: I2C3 clock • RCC_APB1Periph_CAN1: CAN1 clock • RCC_APB1Periph_CAN2: CAN2 clock • RCC_APB1Periph_PWR: PWR clock • RCC_APB1Periph_DAC: DAC clock
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.14 RCC_APB2PeriphClockCmd()

```
void RCC_APB2PeriphClockCmd (
            uint32_t RCC_APB2Periph,
            FunctionalState NewState )
```

Enables or disables the High Speed APB (APB2) peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_APB2Periph	specifies the APB2 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_APB2Periph_TIM1: TIM1 clock • RCC_APB2Periph_TIM8: TIM8 clock • RCC_APB2Periph_USART1: USART1 clock • RCC_APB2Periph_USART6: USART6 clock • RCC_APB2Periph_ADC1: ADC1 clock • RCC_APB2Periph_ADC2: ADC2 clock • RCC_APB2Periph_ADC3: ADC3 clock • RCC_APB2Periph_SDIO: SDIO clock • RCC_APB2Periph_SPI1: SPI1 clock • RCC_APB2Periph_SYSCFG: SYSCFG clock • RCC_APB2Periph_TIM9: TIM9 clock • RCC_APB2Periph_TIM10: TIM10 clock • RCC_APB2Periph_TIM11: TIM11 clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.15 RCC_APB2PeriphClockLPModeCmd()

```
void RCC_APB2PeriphClockLPModeCmd (
            uint32_t RCC_APB2Periph,
            FunctionalState NewState )
```

Enables or disables the APB2 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_APB2Periph	specifies the APB2 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_APB2Periph_TIM1: TIM1 clock • RCC_APB2Periph_TIM8: TIM8 clock • RCC_APB2Periph_USART1: USART1 clock • RCC_APB2Periph_USART6: USART6 clock • RCC_APB2Periph_ADC1: ADC1 clock • RCC_APB2Periph_ADC2: ADC2 clock • RCC_APB2Periph_ADC3: ADC3 clock • RCC_APB2Periph_SDIO: SDIO clock • RCC_APB2Periph_SPI1: SPI1 clock • RCC_APB2Periph_SYSCFG: SYSCFG clock • RCC_APB2Periph_TIM9: TIM9 clock • RCC_APB2Periph_TIM10: TIM10 clock • RCC_APB2Periph_TIM11: TIM11 clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.16 RCC_APB2PeriphResetCmd()

```
void RCC_APB2PeriphResetCmd (
            uint32_t RCC_APB2Periph,
            FunctionalState NewState )
```

Forces or releases High Speed APB (APB2) peripheral reset.

Parameters

RCC_APB2Periph	specifies the APB2 peripheral to reset. This parameter can be any combination of the following values: • RCC_APB2Periph_TIM1: TIM1 clock • RCC_APB2Periph_TIM8: TIM8 clock • RCC_APB2Periph_USART1: USART1 clock • RCC_APB2Periph_USART6: USART6 clock • RCC_APB2Periph_ADC1: ADC1 clock • RCC_APB2Periph_ADC2: ADC2 clock • RCC_APB2Periph_ADC3: ADC3 clock • RCC_APB2Periph_SDIO: SDIO clock • RCC_APB2Periph_SPI1: SPI1 clock • RCC_APB2Periph_SYSCFG: SYSCFG clock • RCC_APB2Periph_TIM9: TIM9 clock • RCC_APB2Periph_TIM10: TIM10 clock • RCC_APB2Periph_TIM11: TIM11 clock
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.17 RCC_BackupResetCmd()

```
void RCC_BackupResetCmd (
             FunctionalState NewState )
```

Forces or releases the Backup domain reset.

Note

This function resets the RTC peripheral (including the backup registers) and the RTC clock source selection in RCC_CSR register.

The BKPSRAM is not affected by this reset.

Parameters

NewState	new state of the Backup domain reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.18 RCC_ClearFlag()

```
void RCC_ClearFlag (
             void  )
```

Clears the RCC reset flags. The reset flags are: RCC_FLAG_PINRST, RCC_FLAG_PORRST, RCC_FLAG_↩ SFTRST, RCC_FLAG_IWDGRST, RCC_FLAG_WWDGRST, RCC_FLAG_LPWRRST.

Parameters

None	

Return values

None	

5.127.2.19 RCC_ClearITPendingBit()

```
void RCC_ClearITPendingBit (
             uint8_t RCC_IT )
```

Clears the RCC's interrupt pending bits.

Parameters

RCC↩ _IT	specifies the interrupt pending bit to clear. This parameter can be any combination of the following values: • RCC_IT_LSIRDY: LSI ready interrupt • RCC_IT_LSERDY: LSE ready interrupt • RCC_IT_HSIRDY: HSI ready interrupt • RCC_IT_HSERDY: HSE ready interrupt • RCC_IT_PLLRDY: main PLL ready interrupt • RCC_IT_PLLI2SRDY: PLLI2S ready interrupt • RCC_IT_CSS: Clock Security System interrupt

Return values

None	

5.127.2.20 RCC_ClockSecuritySystemCmd()

```
void RCC_ClockSecuritySystemCmd (
             FunctionalState NewState )
```

Enables or disables the Clock Security System.

Note

If a failure is detected on the HSE oscillator clock, this oscillator is automatically disabled and an interrupt is generated to inform the software about the failure (Clock Security System Interrupt, CSSI), allowing the MCU to perform rescue operations. The CSSI is linked to the Cortex-M4 NMI (Non-Maskable Interrupt) exception vector.

Parameters

NewState	new state of the Clock Security System. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.21 RCC_DeInit()

```
void RCC_DeInit (
             void  )
```

Resets the RCC clock configuration to the default reset state.

Note

The default reset state of the clock configuration is given below:

- HSI ON and used as system clock source
- HSE, PLL and PLLI2S OFF
- AHB, APB1 and APB2 prescaler set to 1.
- CSS, MCO1 and MCO2 OFF
- All interrupts disabled

This function doesn't modify the configuration of the

- Peripheral clocks
- LSI, LSE and RTC clocks

Parameters

None	

Return values

None	

5.127.2.22 RCC_GetClocksFreq()

```
void RCC_GetClocksFreq (
            RCC_ClocksTypeDef * RCC_Clocks )
```

Returns the frequencies of different on chip clocks; SYSCLK, HCLK, PCLK1 and PCLK2.

Note

The system frequency computed by this function is not the real frequency in the chip. It is calculated based on the predefined constant and the selected clock source:

If SYSCLK source is HSI, function returns values based on HSI_VALUE(∗)

If SYSCLK source is HSE, function returns values based on HSE_VALUE(∗∗)

If SYSCLK source is PLL, function returns values based on HSE_VALUE(∗∗) or HSI_VALUE(∗) multiplied/divided by the PLL factors.

(∗) HSI_VALUE is a constant defined in stm32f4xx.h file (default value 16 MHz) but the real value may vary depending on the variations in voltage and temperature.

(∗∗) HSE_VALUE is a constant defined in stm32f4xx.h file (default value 25 MHz), user has to ensure that HSE_VALUE is same as the real frequency of the crystal used. Otherwise, this function may have wrong result.

The result of this function could be not correct when using fractional value for HSE crystal.

Parameters

RCC_Clocks	pointer to a RCC_ClocksTypeDef structure which will hold the clocks frequencies.

Note

This function can be used by the user application to compute the baudrate for the communication peripherals or configure other parameters.

Each time SYSCLK, HCLK, PCLK1 and/or PCLK2 clock changes, this function must be called to update the structure's field. Otherwise, any configuration based on this function will be incorrect.

Return values

None	

5.127.2.23 RCC_GetFlagStatus()

```
FlagStatus RCC_GetFlagStatus (
            uint8_t RCC_FLAG )
```

Checks whether the specified RCC flag is set or not.

Parameters

RCC_FLAG	specifies the flag to check. This parameter can be one of the following values: • RCC_FLAG_HSIRDY: HSI oscillator clock ready • RCC_FLAG_HSERDY: HSE oscillator clock ready • RCC_FLAG_PLLRDY: main PLL clock ready • RCC_FLAG_PLLI2SRDY: PLLI2S clock ready • RCC_FLAG_LSERDY: LSE oscillator clock ready • RCC_FLAG_LSIRDY: LSI oscillator clock ready • RCC_FLAG_BORRST: POR/PDR or BOR reset • RCC_FLAG_PINRST: Pin reset • RCC_FLAG_PORRST: POR/PDR reset • RCC_FLAG_SFTRST: Software reset • RCC_FLAG_IWDGRST: Independent Watchdog reset • RCC_FLAG_WWDGRST: Window Watchdog reset • RCC_FLAG_LPWRRST: Low Power reset

Return values

The	new state of RCC_FLAG (SET or RESET).

5.127.2.24 RCC_GetITStatus()

```
ITStatus RCC_GetITStatus (
            uint8_t RCC_IT )
```

Checks whether the specified RCC interrupt has occurred or not.

Parameters

RCC_IT	specifies the RCC interrupt source to check. This parameter can be one of the following values: • RCC_IT_LSIRDY: LSI ready interrupt • RCC_IT_LSERDY: LSE ready interrupt • RCC_IT_HSIRDY: HSI ready interrupt • RCC_IT_HSERDY: HSE ready interrupt • RCC_IT_PLLRDY: main PLL ready interrupt • RCC_IT_PLLI2SRDY: PLLI2S ready interrupt • RCC_IT_CSS: Clock Security System interrupt

Return values

The	new state of RCC_IT (SET or RESET).

5.127.2.25 RCC_GetSYSCLKSource()

```
uint8_t RCC_GetSYSCLKSource (
             void  )
```

Returns the clock source used as system clock.

Parameters

None	

Return values

The	clock source used as system clock. The returned value can be one of the following: • 0x00: HSI used as system clock • 0x04: HSE used as system clock • 0x08: PLL used as system clock

5.127.2.26 RCC_HCLKConfig()

```
void RCC_HCLKConfig (
             uint32_t RCC_SYSCLK )
```

Configures the AHB clock (HCLK).

Note

Depending on the device voltage range, the software has to set correctly these bits to ensure that HCLK not exceed the maximum allowed frequency (for more details refer to section above "CPU, AHB and APB busses clocks configuration functions")

Parameters

RCC_SYSCLK	defines the AHB clock divider. This clock is derived from the system clock (SYSCLK). This parameter can be one of the following values: • RCC_SYSCLK_Div1: AHB clock = SYSCLK • RCC_SYSCLK_Div2: AHB clock = SYSCLK/2 • RCC_SYSCLK_Div4: AHB clock = SYSCLK/4 • RCC_SYSCLK_Div8: AHB clock = SYSCLK/8 • RCC_SYSCLK_Div16: AHB clock = SYSCLK/16 • RCC_SYSCLK_Div64: AHB clock = SYSCLK/64 • RCC_SYSCLK_Div128: AHB clock = SYSCLK/128 • RCC_SYSCLK_Div256: AHB clock = SYSCLK/256 • RCC_SYSCLK_Div512: AHB clock = SYSCLK/512

Return values

None	

5.127.2.27 RCC_HSEConfig()

```
void RCC_HSEConfig (
             uint8_t RCC_HSE )
```

Configures the External High Speed oscillator (HSE).

Note

After enabling the HSE (RCC_HSE_ON or RCC_HSE_Bypass), the application software should wait on HSERDY flag to be set indicating that HSE clock is stable and can be used to clock the PLL and/or system clock.

HSE state can not be changed if it is used directly or through the PLL as system clock. In this case, you have to select another source of the system clock then change the HSE state (ex. disable it).

The HSE is stopped by hardware when entering STOP and STANDBY modes.

This function reset the CSSON bit, so if the Clock security system(CSS) was previously enabled you have to enable it again after calling this function.

Parameters

RCC_HSE	specifies the new state of the HSE. This parameter can be one of the following values: • RCC_HSE_OFF: turn OFF the HSE oscillator, HSERDY flag goes low after 6 HSE oscillator clock cycles. • RCC_HSE_ON: turn ON the HSE oscillator • RCC_HSE_Bypass: HSE oscillator bypassed with external clock

Return values

None	

5.127.2.28 RCC_HSICmd()

```
void RCC_HSICmd (
             FunctionalState NewState )
```

Enables or disables the Internal High Speed oscillator (HSI).

Note

The HSI is stopped by hardware when entering STOP and STANDBY modes. It is used (enabled by hardware) as system clock source after startup from Reset, wakeup from STOP and STANDBY mode, or in case of failure of the HSE used directly or indirectly as system clock (if the Clock Security System CSS is enabled).

HSI can not be stopped if it is used as system clock source. In this case, you have to select another source of the system clock then stop the HSI.

After enabling the HSI, the application software should wait on HSIRDY flag to be set indicating that HSI clock is stable and can be used as system clock source.

Parameters

NewState	new state of the HSI. This parameter can be: ENABLE or DISABLE.

Note

When the HSI is stopped, HSIRDY flag goes low after 6 HSI oscillator clock cycles.

Return values

None	

5.127.2.29 RCC_I2SCLKConfig()

```
void RCC_I2SCLKConfig (
             uint32_t RCC_I2SCLKSource )
```

Configures the I2S clock source (I2SCLK).

Note

This function must be called before enabling the I2S APB clock.

Parameters

RCC_I2SCLKSource	specifies the I2S clock source. This parameter can be one of the following values: • RCC_I2S2CLKSource_PLLI2S: PLLI2S clock used as I2S clock source • RCC_I2S2CLKSource_Ext: External clock mapped on the I2S_CKIN pin used as I2S clock source

Return values

None	

5.127.2.30 RCC_ITConfig()

```
void RCC_ITConfig (
             uint8_t RCC_IT,
             FunctionalState NewState )
```

Enables or disables the specified RCC interrupts.

Parameters

RCC_IT	specifies the RCC interrupt sources to be enabled or disabled. This parameter can be any combination of the following values: • RCC_IT_LSIRDY: LSI ready interrupt • RCC_IT_LSERDY: LSE ready interrupt • RCC_IT_HSIRDY: HSI ready interrupt • RCC_IT_HSERDY: HSE ready interrupt • RCC_IT_PLLRDY: main PLL ready interrupt • RCC_IT_PLLI2SRDY: PLLI2S ready interrupt
NewState	new state of the specified RCC interrupts. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.31 RCC_LSEConfig()

```
void RCC_LSEConfig (
            uint8_t RCC_LSE )
```

Configures the External Low Speed oscillator (LSE).

Note

As the LSE is in the Backup domain and write access is denied to this domain after reset, you have to enable write access using PWR_BackupAccessCmd(ENABLE) function before to configure the LSE (to be done once after reset).

After enabling the LSE (RCC_LSE_ON or RCC_LSE_Bypass), the application software should wait on LSERDY flag to be set indicating that LSE clock is stable and can be used to clock the RTC.

Parameters

RCC_LSE	specifies the new state of the LSE. This parameter can be one of the following values: • RCC_LSE_OFF: turn OFF the LSE oscillator, LSERDY flag goes low after 6 LSE oscillator clock cycles. • RCC_LSE_ON: turn ON the LSE oscillator • RCC_LSE_Bypass: LSE oscillator bypassed with external clock

Return values

None	

5.127.2.32 RCC_LSICmd()

```
void RCC_LSICmd (
            FunctionalState NewState )
```

Enables or disables the Internal Low Speed oscillator (LSI).

Note

After enabling the LSI, the application software should wait on LSIRDY flag to be set indicating that LSI clock is stable and can be used to clock the IWDG and/or the RTC.

LSI can not be disabled if the IWDG is running.

Parameters

NewState	new state of the LSI. This parameter can be: ENABLE or DISABLE.

Note

When the LSI is stopped, LSIRDY flag goes low after 6 LSI oscillator clock cycles.

Return values

None	

5.127.2.33 RCC_MCO1Config()

```
void RCC_MCO1Config (
             uint32_t RCC_MCO1Source,
             uint32_t RCC_MCO1Div )
```

Selects the clock source to output on MCO1 pin(PA8).

Note

PA8 should be configured in alternate function mode.

Parameters

RCC_MCO1Source	specifies the clock source to output. This parameter can be one of the following values: • RCC_MCO1Source_HSI: HSI clock selected as MCO1 source • RCC_MCO1Source_LSE: LSE clock selected as MCO1 source • RCC_MCO1Source_HSE: HSE clock selected as MCO1 source • RCC_MCO1Source_PLLCLK: main PLL clock selected as MCO1 source
RCC_MCO1Div	specifies the MCO1 prescaler. This parameter can be one of the following values: • RCC_MCO1Div_1: no division applied to MCO1 clock • RCC_MCO1Div_2: division by 2 applied to MCO1 clock • RCC_MCO1Div_3: division by 3 applied to MCO1 clock • RCC_MCO1Div_4: division by 4 applied to MCO1 clock • RCC_MCO1Div_5: division by 5 applied to MCO1 clock

Return values

None	

5.127.2.34 RCC_MCO2Config()

```
void RCC_MCO2Config (
            uint32_t RCC_MCO2Source,
            uint32_t RCC_MCO2Div )
```

Selects the clock source to output on MCO2 pin(PC9).

Note

PC9 should be configured in alternate function mode.

Parameters

RCC_MCO2Source	specifies the clock source to output. This parameter can be one of the following values: • RCC_MCO2Source_SYSCLK: System clock (SYSCLK) selected as MCO2 source • RCC_MCO2Source_PLLI2SCLK: PLLI2S clock selected as MCO2 source • RCC_MCO2Source_HSE: HSE clock selected as MCO2 source • RCC_MCO2Source_PLLCLK: main PLL clock selected as MCO2 source
RCC_MCO2Div	specifies the MCO2 prescaler. This parameter can be one of the following values: • RCC_MCO2Div_1: no division applied to MCO2 clock • RCC_MCO2Div_2: division by 2 applied to MCO2 clock • RCC_MCO2Div_3: division by 3 applied to MCO2 clock • RCC_MCO2Div_4: division by 4 applied to MCO2 clock • RCC_MCO2Div_5: division by 5 applied to MCO2 clock

Return values

None	

5.127.2.35 RCC_PCLK1Config()

```
void RCC_PCLK1Config (
            uint32_t RCC_HCLK )
```

Configures the Low Speed APB clock (PCLK1).

Parameters

RCC_HCLK	defines the APB1 clock divider. This clock is derived from the AHB clock (HCLK). This parameter can be one of the following values: • RCC_HCLK_Div1: APB1 clock = HCLK • RCC_HCLK_Div2: APB1 clock = HCLK/2 • RCC_HCLK_Div4: APB1 clock = HCLK/4 • RCC_HCLK_Div8: APB1 clock = HCLK/8 • RCC_HCLK_Div16: APB1 clock = HCLK/16

Return values

None	

5.127.2.36 RCC_PCLK2Config()

```
void RCC_PCLK2Config (
             uint32_t RCC_HCLK )
```

Configures the High Speed APB clock (PCLK2).

Parameters

RCC_HCLK	defines the APB2 clock divider. This clock is derived from the AHB clock (HCLK). This parameter can be one of the following values: • RCC_HCLK_Div1: APB2 clock = HCLK • RCC_HCLK_Div2: APB2 clock = HCLK/2 • RCC_HCLK_Div4: APB2 clock = HCLK/4 • RCC_HCLK_Div8: APB2 clock = HCLK/8 • RCC_HCLK_Div16: APB2 clock = HCLK/16

Return values

None	

5.127.2.37 RCC_PLLCmd()

```
void RCC_PLLCmd (
             FunctionalState NewState )
```

Enables or disables the main PLL.

Note

After enabling the main PLL, the application software should wait on PLLRDY flag to be set indicating that PLL clock is stable and can be used as system clock source.

The main PLL can not be disabled if it is used as system clock source

The main PLL is disabled by hardware when entering STOP and STANDBY modes.

Parameters

NewState	new state of the main PLL. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.38 RCC_PLLConfig()

```
void RCC_PLLConfig (
             uint32_t RCC_PLLSource,
             uint32_t PLLM,
             uint32_t PLLN,
             uint32_t PLLP,
             uint32_t PLLQ )
```

Configures the main PLL clock source, multiplication and division factors.

Note

This function must be used only when the main PLL is disabled.

Parameters

RCC_PLLSource	specifies the PLL entry clock source. This parameter can be one of the following values: • RCC_PLLSource_HSI: HSI oscillator clock selected as PLL clock entry • RCC_PLLSource_HSE: HSE oscillator clock selected as PLL clock entry

Note

This clock source (RCC_PLLSource) is common for the main PLL and PLLI2S.

Parameters

PLLM	specifies the division factor for PLL VCO input clock This parameter must be a number between 0 and 63.

Note

You have to set the PLLM parameter correctly to ensure that the VCO input frequency ranges from 1 to 2 MHz. It is recommended to select a frequency of 2 MHz to limit PLL jitter.

Parameters

PLLN	specifies the multiplication factor for PLL VCO output clock This parameter must be a number between 192 and 432.

Note

You have to set the PLLN parameter correctly to ensure that the VCO output frequency is between 192 and 432 MHz.

Parameters

PLLP	specifies the division factor for main system clock (SYSCLK) This parameter must be a number in the range {2, 4, 6, or 8}.

Note

You have to set the PLLP parameter correctly to not exceed 168 MHz on the System clock frequency.

Parameters

PLLQ	specifies the division factor for OTG FS, SDIO and RNG clocks This parameter must be a number between 4 and 15.

Note

If the USB OTG FS is used in your application, you have to set the PLLQ parameter correctly to have 48 MHz clock for the USB. However, the SDIO and RNG need a frequency lower than or equal to 48 MHz to work correctly.

Return values

None	

5.127.2.39 RCC_PLLI2SCmd()

```
void RCC_PLLI2SCmd (
             FunctionalState NewState )
```

Enables or disables the PLLI2S.

Note

The PLLI2S is disabled by hardware when entering STOP and STANDBY modes.

Parameters

NewState	new state of the PLLI2S. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.40 RCC_PLLI2SConfig()

```
void RCC_PLLI2SConfig (
             uint32_t PLLI2SN,
             uint32_t PLLI2SR )
```

Configures the PLLI2S clock multiplication and division factors.

Note

This function must be used only when the PLLI2S is disabled.

PLLI2S clock source is common with the main PLL (configured in RCC_PLLConfig function)

Parameters

PLLI2SN	specifies the multiplication factor for PLLI2S VCO output clock This parameter must be a number between 192 and 432.

Note

You have to set the PLLI2SN parameter correctly to ensure that the VCO output frequency is between 192 and 432 MHz.

Parameters

PLLI2SR	specifies the division factor for I2S clock This parameter must be a number between 2 and 7.

Note

You have to set the PLLI2SR parameter correctly to not exceed 192 MHz on the I2S clock frequency.

Return values

None	

5.127.2.41 RCC_RTCCLKCmd()

```
void RCC_RTCCLKCmd (
             FunctionalState NewState )
```

Enables or disables the RTC clock.

Note

This function must be used only after the RTC clock source was selected using the RCC_RTCCLKConfig function.

Parameters

NewState	new state of the RTC clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.127.2.42 RCC_RTCCLKConfig()

```
void RCC_RTCCLKConfig (
             uint32_t RCC_RTCCLKSource )
```

Configures the RTC clock (RTCCLK).

Note

As the RTC clock configuration bits are in the Backup domain and write access is denied to this domain after reset, you have to enable write access using PWR_BackupAccessCmd(ENABLE) function before to configure the RTC clock source (to be done once after reset).

Once the RTC clock is configured it can't be changed unless the
Backup domain is reset using RCC_BackupResetCmd() function, or by a Power On Reset (POR).

Parameters

RCC_RTCCLKSource	specifies the RTC clock source. This parameter can be one of the following values: • RCC_RTCCLKSource_LSE: LSE selected as RTC clock • RCC_RTCCLKSource_LSI: LSI selected as RTC clock • RCC_RTCCLKSource_HSE_Divx: HSE clock divided by x selected as RTC clock, where x:[2,31]

Note

If the LSE or LSI is used as RTC clock source, the RTC continues to work in STOP and STANDBY modes, and can be used as wakeup source. However, when the HSE clock is used as RTC clock source, the RTC cannot be used in STOP and STANDBY modes.

The maximum input clock frequency for RTC is 1MHz (when using HSE as RTC clock source).

Return values

None	

5.127.2.43 RCC_SYSCLKConfig()

```
void RCC_SYSCLKConfig (
            uint32_t RCC_SYSCLKSource )
```

Configures the system clock (SYSCLK).

Note

The HSI is used (enabled by hardware) as system clock source after startup from Reset, wake-up from STOP and STANDBY mode, or in case of failure of the HSE used directly or indirectly as system clock (if the Clock Security System CSS is enabled).

A switch from one clock source to another occurs only if the target clock source is ready (clock stable after startup delay or PLL locked). If a clock source which is not yet ready is selected, the switch will occur when the clock source will be ready. You can use RCC_GetSYSCLKSource() function to know which clock is currently used as system clock source.

Parameters

RCC_SYSCLKSource	specifies the clock source used as system clock. This parameter can be one of the following values: • RCC_SYSCLKSource_HSI: HSI selected as system clock source • RCC_SYSCLKSource_HSE: HSE selected as system clock source • RCC_SYSCLKSource_PLLCLK: PLL selected as system clock source

Return values

None	

5.127.2.44 RCC_WaitForHSEStartUp()

```
ErrorStatus RCC_WaitForHSEStartUp (
```

```
            void  )
```

Waits for HSE start-up.

Note

This functions waits on HSERDY flag to be set and return SUCCESS if this flag is set, otherwise returns ERROR if the timeout is reached and this flag is not set. The timeout value is defined by the constant HSE↩ _STARTUP_TIMEOUT in stm32f4xx.h file. You can tailor it depending on the HSE crystal used in your application.

Parameters

None	

Return values

An	ErrorStatus enumeration value: • SUCCESS: HSE oscillator is stable and ready to use • ERROR: HSE oscillator not yet ready

5.128 RCC_Private_Functions

Modules

- Internal and external clocks, PLL, CSS and MCO configuration functions

  Internal and external clocks, PLL, CSS and MCO configuration functions.
- System AHB and APB busses clocks configuration functions

  System, AHB and APB busses clocks configuration functions.
- Peripheral clocks configuration functions

  Peripheral clocks configuration functions.
- Interrupts and flags management functions

  Interrupts and flags management functions.

5.128.1 Detailed Description

5.129 Internal and external clocks, PLL, CSS and MCO configuration functions

Internal and external clocks, PLL, CSS and MCO configuration functions.

Functions

- void RCC_DeInit (void)

  Resets the RCC clock configuration to the default reset state.
- void RCC_HSEConfig (uint8_t RCC_HSE)

  Configures the External High Speed oscillator (HSE).
- ErrorStatus RCC_WaitForHSEStartUp (void)

  Waits for HSE start-up.
- void RCC_AdjustHSICalibrationValue (uint8_t HSICalibrationValue)

  Adjusts the Internal High Speed oscillator (HSI) calibration value.
- void RCC_HSICmd (FunctionalState NewState)

  Enables or disables the Internal High Speed oscillator (HSI).
- void RCC_LSEConfig (uint8_t RCC_LSE)

  Configures the External Low Speed oscillator (LSE).
- void RCC_LSICmd (FunctionalState NewState)

  Enables or disables the Internal Low Speed oscillator (LSI).
- void RCC_PLLConfig (uint32_t RCC_PLLSource, uint32_t PLLM, uint32_t PLLN, uint32_t PLLP, uint32_t PLLQ)

  Configures the main PLL clock source, multiplication and division factors.
- void RCC_PLLCmd (FunctionalState NewState)

  Enables or disables the main PLL.
- void RCC_PLLI2SConfig (uint32_t PLLI2SN, uint32_t PLLI2SR)

  Configures the PLLI2S clock multiplication and division factors.
- void RCC_PLLI2SCmd (FunctionalState NewState)

  Enables or disables the PLLI2S.
- void RCC_ClockSecuritySystemCmd (FunctionalState NewState)

  Enables or disables the Clock Security System.
- void RCC_MCO1Config (uint32_t RCC_MCO1Source, uint32_t RCC_MCO1Div)

  Selects the clock source to output on MCO1 pin(PA8).
- void RCC_MCO2Config (uint32_t RCC_MCO2Source, uint32_t RCC_MCO2Div)

  Selects the clock source to output on MCO2 pin(PC9).

5.129.1 Detailed Description

Internal and external clocks, PLL, CSS and MCO configuration functions.

```
 ================================================================================
      Internal/external clocks, PLL, CSS and MCO configuration functions
 ================================================================================

  This section provide functions allowing to configure the internal/external clocks,
  PLLs, CSS and MCO pins.

  1. HSI (high-speed internal), 16 MHz factory-trimmed RC used directly or through
     the PLL as System clock source.

  2. LSI (low-speed internal), 32 KHz low consumption RC used as IWDG and/or RTC
     clock source.

  3. HSE (high-speed external), 4 to 26 MHz crystal oscillator used directly or
     through the PLL as System clock source. Can be used also as RTC clock source.

  4. LSE (low-speed external), 32 KHz oscillator used as RTC clock source.

  5. PLL (clocked by HSI or HSE), featuring two different output clocks:
      - The first output is used to generate the high speed system clock (up to 168 MHz)
```

```
     - The second output is used to generate the clock for the USB OTG FS (48 MHz),
       the random analog generator (<=48 MHz) and the SDIO (<= 48 MHz).

  6. PLLI2S (clocked by HSI or HSE), used to generate an accurate clock to achieve
     high-quality audio performance on the I2S interface.

  7. CSS (Clock security system), once enable and if a HSE clock failure occurs
     (HSE used directly or through PLL as System clock source), the System clock
     is automatically switched to HSI and an interrupt is generated if enabled.
     The interrupt is linked to the Cortex-M4 NMI (Non-Maskable Interrupt)
     exception vector.

  8. MCO1 (microcontroller clock output), used to output HSI, LSE, HSE or PLL
     clock (through a configurable prescaler) on PA8 pin.

  9. MCO2 (microcontroller clock output), used to output HSE, PLL, SYSCLK or PLLI2S
     clock (through a configurable prescaler) on PC9 pin.
```

5.129.2 Function Documentation

5.129.2.1 RCC_AdjustHSICalibrationValue()

```
void RCC_AdjustHSICalibrationValue (
             uint8_t HSICalibrationValue )
```

Adjusts the Internal High Speed oscillator (HSI) calibration value.

Note

The calibration is used to compensate for the variations in voltage and temperature that influence the frequency of the internal HSI RC.

Parameters

HSICalibrationValue	specifies the calibration trimming value. This parameter must be a number between 0 and 0x1F.

Return values

None	

5.129.2.2 RCC_ClockSecuritySystemCmd()

```
void RCC_ClockSecuritySystemCmd (
             FunctionalState NewState )
```

Enables or disables the Clock Security System.

Note

If a failure is detected on the HSE oscillator clock, this oscillator is automatically disabled and an interrupt is generated to inform the software about the failure (Clock Security System Interrupt, CSSI), allowing the MCU to perform rescue operations. The CSSI is linked to the Cortex-M4 NMI (Non-Maskable Interrupt) exception vector.

Parameters

NewState	new state of the Clock Security System. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.129.2.3 RCC_DeInit()

```
void RCC_DeInit (
             void  )
```

Resets the RCC clock configuration to the default reset state.

Note

The default reset state of the clock configuration is given below:

- HSI ON and used as system clock source
- HSE, PLL and PLLI2S OFF
- AHB, APB1 and APB2 prescaler set to 1.
- CSS, MCO1 and MCO2 OFF
- All interrupts disabled

This function doesn't modify the configuration of the

- Peripheral clocks
- LSI, LSE and RTC clocks

Parameters

None	

Return values

None	

5.129.2.4 RCC_HSEConfig()

```
void RCC_HSEConfig (
            uint8_t RCC_HSE )
```

Configures the External High Speed oscillator (HSE).

Note

After enabling the HSE (RCC_HSE_ON or RCC_HSE_Bypass), the application software should wait on HSERDY flag to be set indicating that HSE clock is stable and can be used to clock the PLL and/or system clock.

HSE state can not be changed if it is used directly or through the PLL as system clock. In this case, you have to select another source of the system clock then change the HSE state (ex. disable it).

The HSE is stopped by hardware when entering STOP and STANDBY modes.

This function reset the CSSON bit, so if the Clock security system(CSS) was previously enabled you have to enable it again after calling this function.

Parameters

RCC_HSE	specifies the new state of the HSE. This parameter can be one of the following values: • RCC_HSE_OFF: turn OFF the HSE oscillator, HSERDY flag goes low after 6 HSE oscillator clock cycles. • RCC_HSE_ON: turn ON the HSE oscillator • RCC_HSE_Bypass: HSE oscillator bypassed with external clock

Return values

None	

5.129.2.5 RCC_HSICmd()

```
void RCC_HSICmd (
            FunctionalState NewState )
```

Enables or disables the Internal High Speed oscillator (HSI).

Note

The HSI is stopped by hardware when entering STOP and STANDBY modes. It is used (enabled by hardware) as system clock source after startup from Reset, wakeup from STOP and STANDBY mode, or in case of failure of the HSE used directly or indirectly as system clock (if the Clock Security System CSS is enabled).

HSI can not be stopped if it is used as system clock source. In this case, you have to select another source of the system clock then stop the HSI.

After enabling the HSI, the application software should wait on HSIRDY flag to be set indicating that HSI clock is stable and can be used as system clock source.

Parameters

NewState	new state of the HSI. This parameter can be: ENABLE or DISABLE.

Note

When the HSI is stopped, HSIRDY flag goes low after 6 HSI oscillator clock cycles.

Return values

None	

5.129.2.6 RCC_LSEConfig()

```
void RCC_LSEConfig (
            uint8_t RCC_LSE )
```

Configures the External Low Speed oscillator (LSE).

Note

As the LSE is in the Backup domain and write access is denied to this domain after reset, you have to enable write access using PWR_BackupAccessCmd(ENABLE) function before to configure the LSE (to be done once after reset).

After enabling the LSE (RCC_LSE_ON or RCC_LSE_Bypass), the application software should wait on LSERDY flag to be set indicating that LSE clock is stable and can be used to clock the RTC.

Parameters

RCC_LSE	specifies the new state of the LSE. This parameter can be one of the following values: • RCC_LSE_OFF: turn OFF the LSE oscillator, LSERDY flag goes low after 6 LSE oscillator clock cycles. • RCC_LSE_ON: turn ON the LSE oscillator • RCC_LSE_Bypass: LSE oscillator bypassed with external clock

Return values

None	

5.129.2.7 RCC_LSICmd()

```
void RCC_LSICmd (
            FunctionalState NewState )
```

Enables or disables the Internal Low Speed oscillator (LSI).

Note

After enabling the LSI, the application software should wait on LSIRDY flag to be set indicating that LSI clock is stable and can be used to clock the IWDG and/or the RTC.

LSI can not be disabled if the IWDG is running.

Parameters

NewState	new state of the LSI. This parameter can be: ENABLE or DISABLE.

Note

When the LSI is stopped, LSIRDY flag goes low after 6 LSI oscillator clock cycles.

Return values

None	

5.129.2.8 RCC_MCO1Config()

```
void RCC_MCO1Config (
            uint32_t RCC_MCO1Source,
            uint32_t RCC_MCO1Div )
```

Selects the clock source to output on MCO1 pin(PA8).

Note

PA8 should be configured in alternate function mode.

Parameters

RCC_MCO1Source	specifies the clock source to output. This parameter can be one of the following values: • RCC_MCO1Source_HSI: HSI clock selected as MCO1 source • RCC_MCO1Source_LSE: LSE clock selected as MCO1 source • RCC_MCO1Source_HSE: HSE clock selected as MCO1 source • RCC_MCO1Source_PLLCLK: main PLL clock selected as MCO1 source
RCC_MCO1Div	specifies the MCO1 prescaler. This parameter can be one of the following values: • RCC_MCO1Div_1: no division applied to MCO1 clock • RCC_MCO1Div_2: division by 2 applied to MCO1 clock • RCC_MCO1Div_3: division by 3 applied to MCO1 clock • RCC_MCO1Div_4: division by 4 applied to MCO1 clock • RCC_MCO1Div_5: division by 5 applied to MCO1 clock

Return values

None	

5.129.2.9 RCC_MCO2Config()

```
void RCC_MCO2Config (
             uint32_t RCC_MCO2Source,
             uint32_t RCC_MCO2Div )
```

Selects the clock source to output on MCO2 pin(PC9).

Note

PC9 should be configured in alternate function mode.

Parameters

RCC_MCO2Source	specifies the clock source to output. This parameter can be one of the following values: • RCC_MCO2Source_SYSCLK: System clock (SYSCLK) selected as MCO2 source • RCC_MCO2Source_PLLI2SCLK: PLLI2S clock selected as MCO2 source • RCC_MCO2Source_HSE: HSE clock selected as MCO2 source • RCC_MCO2Source_PLLCLK: main PLL clock selected as MCO2 source

Parameters

RCC_MCO2Div	specifies the MCO2 prescaler. This parameter can be one of the following values: • RCC_MCO2Div_1: no division applied to MCO2 clock • RCC_MCO2Div_2: division by 2 applied to MCO2 clock • RCC_MCO2Div_3: division by 3 applied to MCO2 clock • RCC_MCO2Div_4: division by 4 applied to MCO2 clock • RCC_MCO2Div_5: division by 5 applied to MCO2 clock

Return values

None	

5.129.2.10 RCC_PLLCmd()

```
void RCC_PLLCmd (
             FunctionalState NewState )
```

Enables or disables the main PLL.

Note

After enabling the main PLL, the application software should wait on PLLRDY flag to be set indicating that PLL clock is stable and can be used as system clock source.

The main PLL can not be disabled if it is used as system clock source

The main PLL is disabled by hardware when entering STOP and STANDBY modes.

Parameters

NewState	new state of the main PLL. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.129.2.11 RCC_PLLConfig()

```
void RCC_PLLConfig (
             uint32_t RCC_PLLSource,
             uint32_t PLLM,
```

```
uint32_t PLLN,
uint32_t PLLP,
uint32_t PLLQ )
```

Configures the main PLL clock source, multiplication and division factors.

Note

This function must be used only when the main PLL is disabled.

Parameters

RCC_PLLSource	specifies the PLL entry clock source. This parameter can be one of the following values: • RCC_PLLSource_HSI: HSI oscillator clock selected as PLL clock entry • RCC_PLLSource_HSE: HSE oscillator clock selected as PLL clock entry

Note

This clock source (RCC_PLLSource) is common for the main PLL and PLLI2S.

Parameters

PLLM	specifies the division factor for PLL VCO input clock This parameter must be a number between 0 and 63.

Note

You have to set the PLLM parameter correctly to ensure that the VCO input frequency ranges from 1 to 2 MHz. It is recommended to select a frequency of 2 MHz to limit PLL jitter.

Parameters

PLLN	specifies the multiplication factor for PLL VCO output clock This parameter must be a number between 192 and 432.

Note

You have to set the PLLN parameter correctly to ensure that the VCO output frequency is between 192 and 432 MHz.

Parameters

PLLP	specifies the division factor for main system clock (SYSCLK) This parameter must be a number in the range {2, 4, 6, or 8}.

Note

You have to set the PLLP parameter correctly to not exceed 168 MHz on the System clock frequency.

Parameters

PLLQ	specifies the division factor for OTG FS, SDIO and RNG clocks This parameter must be a number between 4 and 15.

Note

If the USB OTG FS is used in your application, you have to set the PLLQ parameter correctly to have 48 MHz clock for the USB. However, the SDIO and RNG need a frequency lower than or equal to 48 MHz to work correctly.

Return values

None	

5.129.2.12 RCC_PLLI2SCmd()

```
void RCC_PLLI2SCmd (
             FunctionalState NewState )
```

Enables or disables the PLLI2S.

Note

The PLLI2S is disabled by hardware when entering STOP and STANDBY modes.

Parameters

NewState	new state of the PLLI2S. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.129.2.13 RCC_PLLI2SConfig()

```
void RCC_PLLI2SConfig (
             uint32_t PLLI2SN,
             uint32_t PLLI2SR )
```

Configures the PLLI2S clock multiplication and division factors.

Note

This function must be used only when the PLLI2S is disabled.

PLLI2S clock source is common with the main PLL (configured in RCC_PLLConfig function)

Parameters

PLLI2SN	specifies the multiplication factor for PLLI2S VCO output clock This parameter must be a number between 192 and 432.

Note

You have to set the PLLI2SN parameter correctly to ensure that the VCO output frequency is between 192 and 432 MHz.

Parameters

PLLI2SR	specifies the division factor for I2S clock This parameter must be a number between 2 and 7.

Note

You have to set the PLLI2SR parameter correctly to not exceed 192 MHz on the I2S clock frequency.

Return values

None	

5.129.2.14 RCC_WaitForHSEStartUp()

```
ErrorStatus RCC_WaitForHSEStartUp (
             void  )
```

Waits for HSE start-up.

Note

This functions waits on HSERDY flag to be set and return SUCCESS if this flag is set, otherwise returns ERROR if the timeout is reached and this flag is not set. The timeout value is defined by the constant HSE↩ _STARTUP_TIMEOUT in stm32f4xx.h file. You can tailor it depending on the HSE crystal used in your application.

Parameters

None	

Return values

An	ErrorStatus enumeration value: • SUCCESS: HSE oscillator is stable and ready to use • ERROR: HSE oscillator not yet ready

5.130 System AHB and APB busses clocks configuration functions

System, AHB and APB busses clocks configuration functions.

Functions

- void RCC_SYSCLKConfig (uint32_t RCC_SYSCLKSource)

  Configures the system clock (SYSCLK).
- uint8_t RCC_GetSYSCLKSource (void)

  Returns the clock source used as system clock.
- void RCC_HCLKConfig (uint32_t RCC_SYSCLK)

  Configures the AHB clock (HCLK).
- void RCC_PCLK1Config (uint32_t RCC_HCLK)

  Configures the Low Speed APB clock (PCLK1).
- void RCC_PCLK2Config (uint32_t RCC_HCLK)

  Configures the High Speed APB clock (PCLK2).
- void RCC_GetClocksFreq (RCC_ClocksTypeDef *RCC_Clocks)

  Returns the frequencies of different on chip clocks; SYSCLK, HCLK, PCLK1 and PCLK2.

5.130.1 Detailed Description

System, AHB and APB busses clocks configuration functions.

```
 ===============================================================================
             System, AHB and APB busses clocks configuration functions
 ===============================================================================

  This section provide functions allowing to configure the System, AHB, APB1 and
  APB2 busses clocks.

  1. Several clock sources can be used to drive the System clock (SYSCLK): HSI,
     HSE and PLL.
     The AHB clock (HCLK) is derived from System clock through configurable prescaler
     and used to clock the CPU, memory and peripherals mapped on AHB bus (DMA, GPIO...).
     APB1 (PCLK1) and APB2 (PCLK2) clocks are derived from AHB clock through
     configurable prescalers and used to clock the peripherals mapped on these busses.
     You can use "RCC_GetClocksFreq()" function to retrieve the frequencies of these clocks.

@note All the peripheral clocks are derived from the System clock (SYSCLK) except:
       - I2S: the I2S clock can be derived either from a specific PLL (PLLI2S) or
          from an external clock mapped on the I2S_CKIN pin.
          You have to use RCC_I2SCLKConfig() function to configure this clock.
       - RTC: the RTC clock can be derived either from the LSI, LSE or HSE clock
          divided by 2 to 31. You have to use RCC_RTCCLKConfig() and RCC_RTCCLKCmd()
```

```
      functions to configure this clock.
    - USB OTG FS, SDIO and RTC: USB OTG FS require a frequency equal to 48 MHz
      to work correctly, while the SDIO require a frequency equal or lower than
      to 48. This clock is derived of the main PLL through PLLQ divider.
    - IWDG clock which is always the LSI clock.

 2. The maximum frequency of the SYSCLK and HCLK is 168 MHz, PCLK2 82 MHz and PCLK1 42 MHz.
    Depending on the device voltage range, the maximum frequency should be
    adapted accordingly:
+-------------------------------------------------------------------------------------+
| Latency       |                HCLK clock frequency (MHz)                           |
|               |-----------------------------------------------------------------------|
|               | voltage range  | voltage range  | voltage range   | voltage range   |
|               | 2.7 V - 3.6 V  | 2.4 V - 2.7 V  | 2.1 V - 2.4 V   | 1.8 V - 2.1 V   |
|---------------|----------------|----------------|-----------------|-----------------|
|0WS(1CPU cycle)|0 < HCLK <= 30  |0 < HCLK <= 24  |0 < HCLK <= 18   |0 < HCLK <= 16   |
|---------------|----------------|----------------|-----------------|-----------------|
|1WS(2CPU cycle)|30 < HCLK <= 60 |24 < HCLK <= 48 |18 < HCLK <= 36  |16 < HCLK <= 32  |
|---------------|----------------|----------------|-----------------|-----------------|
|2WS(3CPU cycle)|60 < HCLK <= 90 |48 < HCLK <= 72 |36 < HCLK <= 54  |32 < HCLK <= 48  |
|---------------|----------------|----------------|-----------------|-----------------|
|3WS(4CPU cycle)|90 < HCLK <= 120|72 < HCLK <= 96 |54 < HCLK <= 72  |48 < HCLK <= 64  |
|---------------|----------------|----------------|-----------------|-----------------|
|4WS(5CPU cycle)|120< HCLK <= 150|96 < HCLK <= 120|72 < HCLK <= 90  |64 < HCLK <= 80  |
|---------------|----------------|----------------|-----------------|-----------------|
|5WS(6CPU cycle)|120< HCLK <= 168|120< HCLK <= 144|90 < HCLK <= 108 |80 < HCLK <= 96  |
|---------------|----------------|----------------|-----------------|-----------------|
|6WS(7CPU cycle)|      NA        |144< HCLK <= 168|108 < HCLK <= 120|96 < HCLK <= 112 |
|---------------|----------------|----------------|-----------------|-----------------|
|7WS(8CPU cycle)|      NA        |      NA        |120 < HCLK <= 138|112 < HCLK <= 120|
+-------------------------------------------------------------------------------------+
  @note When VOS bit (in PWR_CR register) is reset to '0, the maximum value of HCLK is 144 MHz.
        You can use PWR_MainRegulatorModeConfig() function to set or reset this bit.
```

5.130.2 Function Documentation

5.130.2.1 RCC_GetClocksFreq()

```
void RCC_GetClocksFreq (
            RCC_ClocksTypeDef * RCC_Clocks )
```

Returns the frequencies of different on chip clocks; SYSCLK, HCLK, PCLK1 and PCLK2.

Note

The system frequency computed by this function is not the real frequency in the chip. It is calculated based on the predefined constant and the selected clock source:

If SYSCLK source is HSI, function returns values based on HSI_VALUE(∗)

If SYSCLK source is HSE, function returns values based on HSE_VALUE(∗∗)

If SYSCLK source is PLL, function returns values based on HSE_VALUE(∗∗) or HSI_VALUE(∗) multiplied/divided by the PLL factors.

(∗) HSI_VALUE is a constant defined in stm32f4xx.h file (default value 16 MHz) but the real value may vary depending on the variations in voltage and temperature.

(∗∗) HSE_VALUE is a constant defined in stm32f4xx.h file (default value 25 MHz), user has to ensure that HSE_VALUE is same as the real frequency of the crystal used. Otherwise, this function may have wrong result.

The result of this function could be not correct when using fractional value for HSE crystal.

Parameters

RCC_Clocks	pointer to a RCC_ClocksTypeDef structure which will hold the clocks frequencies.

Note

This function can be used by the user application to compute the baudrate for the communication peripherals or configure other parameters.

Each time SYSCLK, HCLK, PCLK1 and/or PCLK2 clock changes, this function must be called to update the structure's field. Otherwise, any configuration based on this function will be incorrect.

Return values

None	

5.130.2.2 RCC_GetSYSCLKSource()

```
uint8_t RCC_GetSYSCLKSource (
            void  )
```

Returns the clock source used as system clock.

Parameters

None	

Return values

The	clock source used as system clock. The returned value can be one of the following: • 0x00: HSI used as system clock • 0x04: HSE used as system clock • 0x08: PLL used as system clock

5.130.2.3 RCC_HCLKConfig()

```
void RCC_HCLKConfig (
            uint32_t RCC_SYSCLK )
```

Configures the AHB clock (HCLK).

Note

Depending on the device voltage range, the software has to set correctly these bits to ensure that HCLK not exceed the maximum allowed frequency (for more details refer to section above "CPU, AHB and APB busses clocks configuration functions")

Parameters

RCC_SYSCLK	defines the AHB clock divider. This clock is derived from the system clock (SYSCLK). This parameter can be one of the following values: • RCC_SYSCLK_Div1: AHB clock = SYSCLK • RCC_SYSCLK_Div2: AHB clock = SYSCLK/2 • RCC_SYSCLK_Div4: AHB clock = SYSCLK/4 • RCC_SYSCLK_Div8: AHB clock = SYSCLK/8 • RCC_SYSCLK_Div16: AHB clock = SYSCLK/16 • RCC_SYSCLK_Div64: AHB clock = SYSCLK/64 • RCC_SYSCLK_Div128: AHB clock = SYSCLK/128 • RCC_SYSCLK_Div256: AHB clock = SYSCLK/256 • RCC_SYSCLK_Div512: AHB clock = SYSCLK/512

Return values

None	

5.130.2.4 RCC_PCLK1Config()

```
void RCC_PCLK1Config (
             uint32_t RCC_HCLK )
```

Configures the Low Speed APB clock (PCLK1).

Parameters

RCC_HCLK	defines the APB1 clock divider. This clock is derived from the AHB clock (HCLK). This parameter can be one of the following values: • RCC_HCLK_Div1: APB1 clock = HCLK • RCC_HCLK_Div2: APB1 clock = HCLK/2 • RCC_HCLK_Div4: APB1 clock = HCLK/4 • RCC_HCLK_Div8: APB1 clock = HCLK/8 • RCC_HCLK_Div16: APB1 clock = HCLK/16

Return values

None	

5.130.2.5 RCC_PCLK2Config()

```
void RCC_PCLK2Config (
            uint32_t RCC_HCLK )
```

Configures the High Speed APB clock (PCLK2).

Parameters

RCC_HCLK	defines the APB2 clock divider. This clock is derived from the AHB clock (HCLK). This parameter can be one of the following values: • RCC_HCLK_Div1: APB2 clock = HCLK • RCC_HCLK_Div2: APB2 clock = HCLK/2 • RCC_HCLK_Div4: APB2 clock = HCLK/4 • RCC_HCLK_Div8: APB2 clock = HCLK/8 • RCC_HCLK_Div16: APB2 clock = HCLK/16

Return values

None	

5.130.2.6 RCC_SYSCLKConfig()

```
void RCC_SYSCLKConfig (
            uint32_t RCC_SYSCLKSource )
```

Configures the system clock (SYSCLK).

Note

The HSI is used (enabled by hardware) as system clock source after startup from Reset, wake-up from STOP and STANDBY mode, or in case of failure of the HSE used directly or indirectly as system clock (if the Clock Security System CSS is enabled).

A switch from one clock source to another occurs only if the target clock source is ready (clock stable after startup delay or PLL locked). If a clock source which is not yet ready is selected, the switch will occur when the clock source will be ready. You can use RCC_GetSYSCLKSource() function to know which clock is currently used as system clock source.

Parameters

RCC_SYSCLKSource	specifies the clock source used as system clock. This parameter can be one of the following values: • RCC_SYSCLKSource_HSI: HSI selected as system clock source • RCC_SYSCLKSource_HSE: HSE selected as system clock source • RCC_SYSCLKSource_PLLCLK: PLL selected as system clock source

Return values

None	

5.131 Peripheral clocks configuration functions

Peripheral clocks configuration functions.

Functions

- void RCC_RTCCLKConfig (uint32_t RCC_RTCCLKSource)

  Configures the RTC clock (RTCCLK).
- void RCC_RTCCLKCmd (FunctionalState NewState)

  Enables or disables the RTC clock.
- void RCC_BackupResetCmd (FunctionalState NewState)

  Forces or releases the Backup domain reset.
- void RCC_I2SCLKConfig (uint32_t RCC_I2SCLKSource)

  Configures the I2S clock source (I2SCLK).
- void RCC_AHB1PeriphClockCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Enables or disables the AHB1 peripheral clock.
- void RCC_AHB2PeriphClockCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Enables or disables the AHB2 peripheral clock.
- void RCC_AHB3PeriphClockCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Enables or disables the AHB3 peripheral clock.
- void RCC_APB1PeriphClockCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Enables or disables the Low Speed APB (APB1) peripheral clock.
- void RCC_APB2PeriphClockCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Enables or disables the High Speed APB (APB2) peripheral clock.
- void RCC_AHB1PeriphResetCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Forces or releases AHB1 peripheral reset.
- void RCC_AHB2PeriphResetCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Forces or releases AHB2 peripheral reset.
- void RCC_AHB3PeriphResetCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Forces or releases AHB3 peripheral reset.
- void RCC_APB1PeriphResetCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Forces or releases Low Speed APB (APB1) peripheral reset.
- void RCC_APB2PeriphResetCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

Forces or releases High Speed APB (APB2) peripheral reset.

- void RCC_AHB1PeriphClockLPModeCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Enables or disables the AHB1 peripheral clock during Low Power (Sleep) mode.
- void RCC_AHB2PeriphClockLPModeCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Enables or disables the AHB2 peripheral clock during Low Power (Sleep) mode.
- void RCC_AHB3PeriphClockLPModeCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Enables or disables the AHB3 peripheral clock during Low Power (Sleep) mode.
- void RCC_APB1PeriphClockLPModeCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Enables or disables the APB1 peripheral clock during Low Power (Sleep) mode.
- void RCC_APB2PeriphClockLPModeCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Enables or disables the APB2 peripheral clock during Low Power (Sleep) mode.

5.131.1 Detailed Description

Peripheral clocks configuration functions.

```
 ===============================================================================
                   Peripheral clocks configuration functions
 ===============================================================================

  This section provide functions allowing to configure the Peripheral clocks.

  1. The RTC clock which is derived from the LSI, LSE or HSE clock divided by 2 to 31.

  2. After restart from Reset or wakeup from STANDBY, all peripherals are off
     except internal SRAM, Flash and JTAG. Before to start using a peripheral you
     have to enable its interface clock. You can do this using RCC_AHBPeriphClockCmd()
     , RCC_APB2PeriphClockCmd() and RCC_APB1PeriphClockCmd() functions.

  3. To reset the peripherals configuration (to the default state after device reset)
     you can use RCC_AHBPeriphResetCmd(), RCC_APB2PeriphResetCmd() and
     RCC_APB1PeriphResetCmd() functions.

  4. To further reduce power consumption in SLEEP mode the peripheral clocks can
     be disabled prior to executing the WFI or WFE instructions. You can do this
     using RCC_AHBPeriphClockLPModeCmd(), RCC_APB2PeriphClockLPModeCmd() and
     RCC_APB1PeriphClockLPModeCmd() functions.
```

5.131.2 Function Documentation

5.131.2.1 RCC_AHB1PeriphClockCmd()

```
void RCC_AHB1PeriphClockCmd (
             uint32_t RCC_AHB1Periph,
             FunctionalState NewState )
```

Enables or disables the AHB1 peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_AHBPeriph	specifies the AHB1 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_AHB1Periph_GPIOA: GPIOA clock • RCC_AHB1Periph_GPIOB: GPIOB clock • RCC_AHB1Periph_GPIOC: GPIOC clock • RCC_AHB1Periph_GPIOD: GPIOD clock • RCC_AHB1Periph_GPIOE: GPIOE clock • RCC_AHB1Periph_GPIOF: GPIOF clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOI: GPIOI clock • RCC_AHB1Periph_CRC: CRC clock • RCC_AHB1Periph_BKPSRAM: BKPSRAM interface clock • RCC_AHB1Periph_CCMDATARAMEN CCM data RAM interface clock • RCC_AHB1Periph_DMA1: DMA1 clock • RCC_AHB1Periph_DMA2: DMA2 clock • RCC_AHB1Periph_ETH_MAC: Ethernet MAC clock • RCC_AHB1Periph_ETH_MAC_Tx: Ethernet Transmission clock • RCC_AHB1Periph_ETH_MAC_Rx: Ethernet Reception clock • RCC_AHB1Periph_ETH_MAC_PTP: Ethernet PTP clock • RCC_AHB1Periph_OTG_HS: USB OTG HS clock • RCC_AHB1Periph_OTG_HS_ULPI: USB OTG HS ULPI clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.2 RCC_AHB1PeriphClockLPModeCmd()

```
void RCC_AHB1PeriphClockLPModeCmd (
             uint32_t RCC_AHB1Periph,
             FunctionalState NewState )
```

Enables or disables the AHB1 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_AHBPeriph	specifies the AHB1 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_AHB1Periph_GPIOA: GPIOA clock • RCC_AHB1Periph_GPIOB: GPIOB clock • RCC_AHB1Periph_GPIOC: GPIOC clock • RCC_AHB1Periph_GPIOD: GPIOD clock • RCC_AHB1Periph_GPIOE: GPIOE clock • RCC_AHB1Periph_GPIOF: GPIOF clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOI: GPIOI clock • RCC_AHB1Periph_CRC: CRC clock • RCC_AHB1Periph_BKPSRAM: BKPSRAM interface clock • RCC_AHB1Periph_DMA1: DMA1 clock • RCC_AHB1Periph_DMA2: DMA2 clock • RCC_AHB1Periph_ETH_MAC: Ethernet MAC clock • RCC_AHB1Periph_ETH_MAC_Tx: Ethernet Transmission clock • RCC_AHB1Periph_ETH_MAC_Rx: Ethernet Reception clock • RCC_AHB1Periph_ETH_MAC_PTP: Ethernet PTP clock • RCC_AHB1Periph_OTG_HS: USB OTG HS clock • RCC_AHB1Periph_OTG_HS_ULPI: USB OTG HS ULPI clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.3 RCC_AHB1PeriphResetCmd()

```
void RCC_AHB1PeriphResetCmd (
            uint32_t RCC_AHB1Periph,
            FunctionalState NewState )
```

Forces or releases AHB1 peripheral reset.

Parameters

RCC_AHB1Periph	specifies the AHB1 peripheral to reset. This parameter can be any combination of the following values: • RCC_AHB1Periph_GPIOA: GPIOA clock • RCC_AHB1Periph_GPIOB: GPIOB clock • RCC_AHB1Periph_GPIOC: GPIOC clock • RCC_AHB1Periph_GPIOD: GPIOD clock • RCC_AHB1Periph_GPIOE: GPIOE clock • RCC_AHB1Periph_GPIOF: GPIOF clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOG: GPIOG clock • RCC_AHB1Periph_GPIOI: GPIOI clock • RCC_AHB1Periph_CRC: CRC clock • RCC_AHB1Periph_DMA1: DMA1 clock • RCC_AHB1Periph_DMA2: DMA2 clock • RCC_AHB1Periph_ETH_MAC: Ethernet MAC clock • RCC_AHB1Periph_OTG_HS: USB OTG HS clock
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.4 RCC_AHB2PeriphClockCmd()

```
void RCC_AHB2PeriphClockCmd (
             uint32_t RCC_AHB2Periph,
             FunctionalState NewState )
```

Enables or disables the AHB2 peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_AHBPeriph	specifies the AHB2 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_AHB2Periph_DCMI: DCMI clock • RCC_AHB2Periph_CRYP: CRYP clock • RCC_AHB2Periph_HASH: HASH clock • RCC_AHB2Periph_RNG: RNG clock • RCC_AHB2Periph_OTG_FS: USB OTG FS clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.5 RCC_AHB2PeriphClockLPModeCmd()

```
void RCC_AHB2PeriphClockLPModeCmd (
             uint32_t RCC_AHB2Periph,
             FunctionalState NewState )
```

Enables or disables the AHB2 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_AHBPeriph	specifies the AHB2 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_AHB2Periph_DCMI: DCMI clock • RCC_AHB2Periph_CRYP: CRYP clock • RCC_AHB2Periph_HASH: HASH clock • RCC_AHB2Periph_RNG: RNG clock • RCC_AHB2Periph_OTG_FS: USB OTG FS clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.6 RCC_AHB2PeriphResetCmd()

```
void RCC_AHB2PeriphResetCmd (
            uint32_t RCC_AHB2Periph,
            FunctionalState NewState )
```

Forces or releases AHB2 peripheral reset.

Parameters

RCC_AHB2Periph	specifies the AHB2 peripheral to reset. This parameter can be any combination of the following values: • RCC_AHB2Periph_DCMI: DCMI clock • RCC_AHB2Periph_CRYP: CRYP clock • RCC_AHB2Periph_HASH: HASH clock • RCC_AHB2Periph_RNG: RNG clock • RCC_AHB2Periph_OTG_FS: USB OTG FS clock
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.7 RCC_AHB3PeriphClockCmd()

```
void RCC_AHB3PeriphClockCmd (
            uint32_t RCC_AHB3Periph,
            FunctionalState NewState )
```

Enables or disables the AHB3 peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_AHBPeriph	specifies the AHB3 peripheral to gates its clock. This parameter must be: RCC_AHB3Periph_FSMC
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.8 RCC_AHB3PeriphClockLPModeCmd()

```
void RCC_AHB3PeriphClockLPModeCmd (
             uint32_t RCC_AHB3Periph,
             FunctionalState NewState )
```

Enables or disables the AHB3 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_AHBPeriph	specifies the AHB3 peripheral to gates its clock. This parameter must be: RCC_AHB3Periph_FSMC
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.9 RCC_AHB3PeriphResetCmd()

```
void RCC_AHB3PeriphResetCmd (
             uint32_t RCC_AHB3Periph,
             FunctionalState NewState )
```

Forces or releases AHB3 peripheral reset.

Parameters

RCC_AHB3Periph	specifies the AHB3 peripheral to reset. This parameter must be: RCC_AHB3Periph_FSMC
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.10 RCC_APB1PeriphClockCmd()

```
void RCC_APB1PeriphClockCmd (
             uint32_t RCC_APB1Periph,
             FunctionalState NewState )
```

Enables or disables the Low Speed APB (APB1) peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_APB1Periph	specifies the APB1 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_APB1Periph_TIM2: TIM2 clock • RCC_APB1Periph_TIM3: TIM3 clock • RCC_APB1Periph_TIM4: TIM4 clock • RCC_APB1Periph_TIM5: TIM5 clock • RCC_APB1Periph_TIM6: TIM6 clock • RCC_APB1Periph_TIM7: TIM7 clock • RCC_APB1Periph_TIM12: TIM12 clock • RCC_APB1Periph_TIM13: TIM13 clock • RCC_APB1Periph_TIM14: TIM14 clock • RCC_APB1Periph_WWDG: WWDG clock • RCC_APB1Periph_SPI2: SPI2 clock • RCC_APB1Periph_SPI3: SPI3 clock • RCC_APB1Periph_USART2: USART2 clock • RCC_APB1Periph_USART3: USART3 clock • RCC_APB1Periph_UART4: UART4 clock • RCC_APB1Periph_UART5: UART5 clock • RCC_APB1Periph_I2C1: I2C1 clock • RCC_APB1Periph_I2C2: I2C2 clock • RCC_APB1Periph_I2C3: I2C3 clock • RCC_APB1Periph_CAN1: CAN1 clock • RCC_APB1Periph_CAN2: CAN2 clock • RCC_APB1Periph_PWR: PWR clock • RCC_APB1Periph_DAC: DAC clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.11 RCC_APB1PeriphClockLPModeCmd()

```
void RCC_APB1PeriphClockLPModeCmd (
            uint32_t RCC_APB1Periph,
            FunctionalState NewState )
```

Enables or disables the APB1 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_APB1Periph	specifies the APB1 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_APB1Periph_TIM2: TIM2 clock • RCC_APB1Periph_TIM3: TIM3 clock • RCC_APB1Periph_TIM4: TIM4 clock • RCC_APB1Periph_TIM5: TIM5 clock • RCC_APB1Periph_TIM6: TIM6 clock • RCC_APB1Periph_TIM7: TIM7 clock • RCC_APB1Periph_TIM12: TIM12 clock • RCC_APB1Periph_TIM13: TIM13 clock • RCC_APB1Periph_TIM14: TIM14 clock • RCC_APB1Periph_WWDG: WWDG clock • RCC_APB1Periph_SPI2: SPI2 clock • RCC_APB1Periph_SPI3: SPI3 clock • RCC_APB1Periph_USART2: USART2 clock • RCC_APB1Periph_USART3: USART3 clock • RCC_APB1Periph_UART4: UART4 clock • RCC_APB1Periph_UART5: UART5 clock • RCC_APB1Periph_I2C1: I2C1 clock • RCC_APB1Periph_I2C2: I2C2 clock • RCC_APB1Periph_I2C3: I2C3 clock • RCC_APB1Periph_CAN1: CAN1 clock • RCC_APB1Periph_CAN2: CAN2 clock • RCC_APB1Periph_PWR: PWR clock • RCC_APB1Periph_DAC: DAC clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.12 RCC_APB1PeriphResetCmd()

```
void RCC_APB1PeriphResetCmd (
            uint32_t RCC_APB1Periph,
            FunctionalState NewState )
```

Forces or releases Low Speed APB (APB1) peripheral reset.

Parameters

RCC_APB1Periph	specifies the APB1 peripheral to reset. This parameter can be any combination of the following values: • RCC_APB1Periph_TIM2: TIM2 clock • RCC_APB1Periph_TIM3: TIM3 clock • RCC_APB1Periph_TIM4: TIM4 clock • RCC_APB1Periph_TIM5: TIM5 clock • RCC_APB1Periph_TIM6: TIM6 clock • RCC_APB1Periph_TIM7: TIM7 clock • RCC_APB1Periph_TIM12: TIM12 clock • RCC_APB1Periph_TIM13: TIM13 clock • RCC_APB1Periph_TIM14: TIM14 clock • RCC_APB1Periph_WWDG: WWDG clock • RCC_APB1Periph_SPI2: SPI2 clock • RCC_APB1Periph_SPI3: SPI3 clock • RCC_APB1Periph_USART2: USART2 clock • RCC_APB1Periph_USART3: USART3 clock • RCC_APB1Periph_UART4: UART4 clock • RCC_APB1Periph_UART5: UART5 clock • RCC_APB1Periph_I2C1: I2C1 clock • RCC_APB1Periph_I2C2: I2C2 clock • RCC_APB1Periph_I2C3: I2C3 clock • RCC_APB1Periph_CAN1: CAN1 clock • RCC_APB1Periph_CAN2: CAN2 clock • RCC_APB1Periph_PWR: PWR clock • RCC_APB1Periph_DAC: DAC clock
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.13 RCC_APB2PeriphClockCmd()

```
void RCC_APB2PeriphClockCmd (
            uint32_t RCC_APB2Periph,
            FunctionalState NewState )
```

Enables or disables the High Speed APB (APB2) peripheral clock.

Note

After reset, the peripheral clock (used for registers read/write access) is disabled and the application software has to enable this clock before using it.

Parameters

RCC_APB2Periph	specifies the APB2 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_APB2Periph_TIM1: TIM1 clock • RCC_APB2Periph_TIM8: TIM8 clock • RCC_APB2Periph_USART1: USART1 clock • RCC_APB2Periph_USART6: USART6 clock • RCC_APB2Periph_ADC1: ADC1 clock • RCC_APB2Periph_ADC2: ADC2 clock • RCC_APB2Periph_ADC3: ADC3 clock • RCC_APB2Periph_SDIO: SDIO clock • RCC_APB2Periph_SPI1: SPI1 clock • RCC_APB2Periph_SYSCFG: SYSCFG clock • RCC_APB2Periph_TIM9: TIM9 clock • RCC_APB2Periph_TIM10: TIM10 clock • RCC_APB2Periph_TIM11: TIM11 clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.14 RCC_APB2PeriphClockLPModeCmd()

```
void RCC_APB2PeriphClockLPModeCmd (
            uint32_t RCC_APB2Periph,
            FunctionalState NewState )
```

Enables or disables the APB2 peripheral clock during Low Power (Sleep) mode.

Note

Peripheral clock gating in SLEEP mode can be used to further reduce power consumption.

After wakeup from SLEEP mode, the peripheral clock is enabled again.

By default, all peripheral clocks are enabled during SLEEP mode.

Parameters

RCC_APB2Periph	specifies the APB2 peripheral to gates its clock. This parameter can be any combination of the following values: • RCC_APB2Periph_TIM1: TIM1 clock • RCC_APB2Periph_TIM8: TIM8 clock • RCC_APB2Periph_USART1: USART1 clock • RCC_APB2Periph_USART6: USART6 clock • RCC_APB2Periph_ADC1: ADC1 clock • RCC_APB2Periph_ADC2: ADC2 clock • RCC_APB2Periph_ADC3: ADC3 clock • RCC_APB2Periph_SDIO: SDIO clock • RCC_APB2Periph_SPI1: SPI1 clock • RCC_APB2Periph_SYSCFG: SYSCFG clock • RCC_APB2Periph_TIM9: TIM9 clock • RCC_APB2Periph_TIM10: TIM10 clock • RCC_APB2Periph_TIM11: TIM11 clock
NewState	new state of the specified peripheral clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.15 RCC_APB2PeriphResetCmd()

```
void RCC_APB2PeriphResetCmd (
            uint32_t RCC_APB2Periph,
            FunctionalState NewState )
```

Forces or releases High Speed APB (APB2) peripheral reset.

Parameters

RCC_APB2Periph	specifies the APB2 peripheral to reset. This parameter can be any combination of the following values: • RCC_APB2Periph_TIM1: TIM1 clock • RCC_APB2Periph_TIM8: TIM8 clock • RCC_APB2Periph_USART1: USART1 clock • RCC_APB2Periph_USART6: USART6 clock • RCC_APB2Periph_ADC1: ADC1 clock • RCC_APB2Periph_ADC2: ADC2 clock • RCC_APB2Periph_ADC3: ADC3 clock • RCC_APB2Periph_SDIO: SDIO clock • RCC_APB2Periph_SPI1: SPI1 clock • RCC_APB2Periph_SYSCFG: SYSCFG clock • RCC_APB2Periph_TIM9: TIM9 clock • RCC_APB2Periph_TIM10: TIM10 clock • RCC_APB2Periph_TIM11: TIM11 clock
NewState	new state of the specified peripheral reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.16 RCC_BackupResetCmd()

```
void RCC_BackupResetCmd (
             FunctionalState NewState )
```

Forces or releases the Backup domain reset.

Note

This function resets the RTC peripheral (including the backup registers) and the RTC clock source selection in RCC_CSR register.

The BKPSRAM is not affected by this reset.

Parameters

NewState	new state of the Backup domain reset. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.17 RCC_I2SCLKConfig()

```
void RCC_I2SCLKConfig (
            uint32_t RCC_I2SCLKSource )
```

Configures the I2S clock source (I2SCLK).

Note

This function must be called before enabling the I2S APB clock.

Parameters

RCC_I2SCLKSource	specifies the I2S clock source. This parameter can be one of the following values: • RCC_I2S2CLKSource_PLLI2S: PLLI2S clock used as I2S clock source • RCC_I2S2CLKSource_Ext: External clock mapped on the I2S_CKIN pin used as I2S clock source

Return values

None	

5.131.2.18 RCC_RTCCLKCmd()

```
void RCC_RTCCLKCmd (
            FunctionalState NewState )
```

Enables or disables the RTC clock.

Note

This function must be used only after the RTC clock source was selected using the RCC_RTCCLKConfig function.

Parameters

NewState	new state of the RTC clock. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.131.2.19 RCC_RTCCLKConfig()

```
void RCC_RTCCLKConfig (
            uint32_t RCC_RTCCLKSource )
```

Configures the RTC clock (RTCCLK).

Note

As the RTC clock configuration bits are in the Backup domain and write access is denied to this domain after reset, you have to enable write access using PWR_BackupAccessCmd(ENABLE) function before to configure the RTC clock source (to be done once after reset).

Once the RTC clock is configured it can't be changed unless the
Backup domain is reset using RCC_BackupResetCmd() function, or by a Power On Reset (POR).

Parameters

RCC_RTCCLKSource	specifies the RTC clock source. This parameter can be one of the following values: • RCC_RTCCLKSource_LSE: LSE selected as RTC clock • RCC_RTCCLKSource_LSI: LSI selected as RTC clock • RCC_RTCCLKSource_HSE_Divx: HSE clock divided by x selected as RTC clock, where x:[2,31]

Note

If the LSE or LSI is used as RTC clock source, the RTC continues to work in STOP and STANDBY modes, and can be used as wakeup source. However, when the HSE clock is used as RTC clock source, the RTC cannot be used in STOP and STANDBY modes.

The maximum input clock frequency for RTC is 1MHz (when using HSE as RTC clock source).

Return values

None	

5.132 Interrupts and flags management functions

Interrupts and flags management functions.

Functions

- void RCC_ITConfig (uint8_t RCC_IT, FunctionalState NewState)

  Enables or disables the specified RCC interrupts.
- FlagStatus RCC_GetFlagStatus (uint8_t RCC_FLAG)

  Checks whether the specified RCC flag is set or not.
- void RCC_ClearFlag (void)

  Clears the RCC reset flags. The reset flags are: RCC_FLAG_PINRST, RCC_FLAG_PORRST, RCC_FLAG_SFTRST, RCC_FLAG_IWDGRST, RCC_FLAG_WWDGRST, RCC_FLAG_LPWRRST.
- ITStatus RCC_GetITStatus (uint8_t RCC_IT)

  Checks whether the specified RCC interrupt has occurred or not.
- void RCC_ClearITPendingBit (uint8_t RCC_IT)

  Clears the RCC's interrupt pending bits.

5.132.1 Detailed Description

Interrupts and flags management functions.

```
 ===============================================================================
                   Interrupts and flags management functions
 ===============================================================================
```

5.132.2 Function Documentation

5.132.2.1 RCC_ClearFlag()

```
void RCC_ClearFlag (
             void  )
```

Clears the RCC reset flags. The reset flags are: RCC_FLAG_PINRST, RCC_FLAG_PORRST, RCC_FLAG_↩ SFTRST, RCC_FLAG_IWDGRST, RCC_FLAG_WWDGRST, RCC_FLAG_LPWRRST.

Parameters

None	

Return values

None	

5.132.2.2 RCC_ClearITPendingBit()

```
void RCC_ClearITPendingBit (
             uint8_t RCC_IT )
```

Clears the RCC's interrupt pending bits.

Parameters

RCC_IT	specifies the interrupt pending bit to clear. This parameter can be any combination of the following values: • RCC_IT_LSIRDY: LSI ready interrupt • RCC_IT_LSERDY: LSE ready interrupt • RCC_IT_HSIRDY: HSI ready interrupt • RCC_IT_HSERDY: HSE ready interrupt • RCC_IT_PLLRDY: main PLL ready interrupt • RCC_IT_PLLI2SRDY: PLLI2S ready interrupt • RCC_IT_CSS: Clock Security System interrupt

Return values

None	

5.132.2.3 RCC_GetFlagStatus()

```
FlagStatus RCC_GetFlagStatus (
            uint8_t RCC_FLAG )
```

Checks whether the specified RCC flag is set or not.

Parameters

RCC_FLAG	specifies the flag to check. This parameter can be one of the following values: • RCC_FLAG_HSIRDY: HSI oscillator clock ready • RCC_FLAG_HSERDY: HSE oscillator clock ready • RCC_FLAG_PLLRDY: main PLL clock ready • RCC_FLAG_PLLI2SRDY: PLLI2S clock ready • RCC_FLAG_LSERDY: LSE oscillator clock ready • RCC_FLAG_LSIRDY: LSI oscillator clock ready • RCC_FLAG_BORRST: POR/PDR or BOR reset • RCC_FLAG_PINRST: Pin reset • RCC_FLAG_PORRST: POR/PDR reset • RCC_FLAG_SFTRST: Software reset • RCC_FLAG_IWDGRST: Independent Watchdog reset • RCC_FLAG_WWDGRST: Window Watchdog reset • RCC_FLAG_LPWRRST: Low Power reset

Return values

The	new state of RCC_FLAG (SET or RESET).

5.132.2.4 RCC_GetITStatus()

```
ITStatus RCC_GetITStatus (
             uint8_t RCC_IT )
```

Checks whether the specified RCC interrupt has occurred or not.

Parameters

RCC_IT	specifies the RCC interrupt source to check. This parameter can be one of the following values: • RCC_IT_LSIRDY: LSI ready interrupt • RCC_IT_LSERDY: LSE ready interrupt • RCC_IT_HSIRDY: HSI ready interrupt • RCC_IT_HSERDY: HSE ready interrupt • RCC_IT_PLLRDY: main PLL ready interrupt • RCC_IT_PLLI2SRDY: PLLI2S ready interrupt • RCC_IT_CSS: Clock Security System interrupt

Return values

The	new state of RCC_IT (SET or RESET).

5.132.2.5 RCC_ITConfig()

```
void RCC_ITConfig (
             uint8_t RCC_IT,
             FunctionalState NewState )
```

Enables or disables the specified RCC interrupts.

Parameters

RCC_IT	specifies the RCC interrupt sources to be enabled or disabled. This parameter can be any combination of the following values: • RCC_IT_LSIRDY: LSI ready interrupt • RCC_IT_LSERDY: LSE ready interrupt • RCC_IT_HSIRDY: HSI ready interrupt • RCC_IT_HSERDY: HSE ready interrupt • RCC_IT_PLLRDY: main PLL ready interrupt • RCC_IT_PLLI2SRDY: PLLI2S ready interrupt
NewState	new state of the specified RCC interrupts. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133 TIM

TIM driver modules.

Modules

- TIM_Exported_constants
- TIM_Private_Functions

Data Structures

- struct TIM_TimeBaseInitTypeDef

  TIM Time Base Init structure definition

- struct TIM_OCInitTypeDef

  TIM Output Compare Init structure definition

- struct TIM_ICInitTypeDef

  TIM Input Capture Init structure definition

- struct TIM_BDTRInitTypeDef

  BDTR structure definition.

Macros

- #define **SMCR_ETR_MASK** ((uint16_t)0x00FF)
- #define **CCMR_OFFSET** ((uint16_t)0x0018)
- #define **CCER_CCE_SET** ((uint16_t)0x0001)
- #define **CCER_CCNE_SET** ((uint16_t)0x0004)
- #define **CCMR_OC13M_MASK** ((uint16_t)0xFF8F)
- #define **CCMR_OC24M_MASK** ((uint16_t)0x8FFF)

Functions

- void TIM_DeInit (TIM_TypeDef ∗TIMx)

  Deinitializes the TIMx peripheral registers to their default reset values.
- void TIM_TimeBaseInit (TIM_TypeDef ∗TIMx, TIM_TimeBaseInitTypeDef ∗TIM_TimeBaseInitStruct)

  Initializes the TIMx Time Base Unit peripheral according to the specified parameters in the TIM_TimeBaseInitStruct.
- void TIM_TimeBaseStructInit (TIM_TimeBaseInitTypeDef ∗TIM_TimeBaseInitStruct)

  Fills each TIM_TimeBaseInitStruct member with its default value.
- void TIM_PrescalerConfig (TIM_TypeDef ∗TIMx, uint16_t Prescaler, uint16_t TIM_PSCReloadMode)

  Configures the TIMx Prescaler.
- void TIM_CounterModeConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_CounterMode)

  Specifies the TIMx Counter Mode to be used.
- void TIM_SetCounter (TIM_TypeDef ∗TIMx, uint32_t Counter)

  Sets the TIMx Counter Register value.
- void TIM_SetAutoreload (TIM_TypeDef ∗TIMx, uint32_t Autoreload)

  Sets the TIMx Autoreload Register value.
- uint32_t TIM_GetCounter (TIM_TypeDef ∗TIMx)

Gets the TIMx Counter value.

- uint16_t TIM_GetPrescaler (TIM_TypeDef *TIMx)

  Gets the TIMx Prescaler value.
- void TIM_UpdateDisableConfig (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or Disables the TIMx Update event.
- void TIM_UpdateRequestConfig (TIM_TypeDef *TIMx, uint16_t TIM_UpdateSource)

  Configures the TIMx Update Request Interrupt source.
- void TIM_ARRPreloadConfig (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables TIMx peripheral Preload register on ARR.
- void TIM_SelectOnePulseMode (TIM_TypeDef *TIMx, uint16_t TIM_OPMode)

  Selects the TIMx's One Pulse Mode.
- void TIM_SetClockDivision (TIM_TypeDef *TIMx, uint16_t TIM_CKD)

  Sets the TIMx Clock Division value.
- void TIM_Cmd (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables the specified TIM peripheral.
- void TIM_OC1Init (TIM_TypeDef *TIMx, TIM_OCInitTypeDef *TIM_OCInitStruct)

  Initializes the TIMx Channel1 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC2Init (TIM_TypeDef *TIMx, TIM_OCInitTypeDef *TIM_OCInitStruct)

  Initializes the TIMx Channel2 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC3Init (TIM_TypeDef *TIMx, TIM_OCInitTypeDef *TIM_OCInitStruct)

  Initializes the TIMx Channel3 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC4Init (TIM_TypeDef *TIMx, TIM_OCInitTypeDef *TIM_OCInitStruct)

  Initializes the TIMx Channel4 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OCStructInit (TIM_OCInitTypeDef *TIM_OCInitStruct)

  Fills each TIM_OCInitStruct member with its default value.
- void TIM_SelectOCxM (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_OCMode)

  Selects the TIM Output Compare Mode.
- void TIM_SetCompare1 (TIM_TypeDef *TIMx, uint32_t Compare1)

  Sets the TIMx Capture Compare1 Register value.
- void TIM_SetCompare2 (TIM_TypeDef *TIMx, uint32_t Compare2)

  Sets the TIMx Capture Compare2 Register value.
- void TIM_SetCompare3 (TIM_TypeDef *TIMx, uint32_t Compare3)

  Sets the TIMx Capture Compare3 Register value.
- void TIM_SetCompare4 (TIM_TypeDef *TIMx, uint32_t Compare4)

  Sets the TIMx Capture Compare4 Register value.
- void TIM_ForcedOC1Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 1 waveform to active or inactive level.
- void TIM_ForcedOC2Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 2 waveform to active or inactive level.
- void TIM_ForcedOC3Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 3 waveform to active or inactive level.
- void TIM_ForcedOC4Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 4 waveform to active or inactive level.
- void TIM_OC1PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR1.
- void TIM_OC2PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR2.
- void TIM_OC3PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR3.
- void TIM_OC4PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR4.

- void TIM_OC1FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 1 Fast feature.
- void TIM_OC2FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 2 Fast feature.
- void TIM_OC3FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 3 Fast feature.
- void TIM_OC4FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 4 Fast feature.
- void TIM_ClearOC1Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF1 signal on an external event.
- void TIM_ClearOC2Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF2 signal on an external event.
- void TIM_ClearOC3Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF3 signal on an external event.
- void TIM_ClearOC4Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF4 signal on an external event.
- void TIM_OC1PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 1 polarity.
- void TIM_OC1NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 1N polarity.
- void TIM_OC2PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 2 polarity.
- void TIM_OC2NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 2N polarity.
- void TIM_OC3PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 3 polarity.
- void TIM_OC3NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 3N polarity.
- void TIM_OC4PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 4 polarity.
- void TIM_CCxCmd (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_CCx)

  Enables or disables the TIM Capture Compare Channel x.
- void TIM_CCxNCmd (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_CCxN)

  Enables or disables the TIM Capture Compare Channel xN.
- void TIM_ICInit (TIM_TypeDef *TIMx, TIM_ICInitTypeDef *TIM_ICInitStruct)

  Initializes the TIM peripheral according to the specified parameters in the TIM_ICInitStruct.
- void TIM_ICStructInit (TIM_ICInitTypeDef *TIM_ICInitStruct)

  Fills each TIM_ICInitStruct member with its default value.
- void TIM_PWMIConfig (TIM_TypeDef *TIMx, TIM_ICInitTypeDef *TIM_ICInitStruct)

  Configures the TIM peripheral according to the specified parameters in the TIM_ICInitStruct to measure an external PWM signal.
- uint32_t TIM_GetCapture1 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 1 value.
- uint32_t TIM_GetCapture2 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 2 value.
- uint32_t TIM_GetCapture3 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 3 value.
- uint32_t TIM_GetCapture4 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 4 value.
- void TIM_SetIC1Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 1 prescaler.

- void TIM_SetIC2Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 2 prescaler.
- void TIM_SetIC3Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 3 prescaler.
- void TIM_SetIC4Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 4 prescaler.
- void TIM_BDTRConfig (TIM_TypeDef *TIMx, TIM_BDTRInitTypeDef *TIM_BDTRInitStruct)

  Configures the Break feature, dead time, Lock level, OSSI/OSSR State and the AOE(automatic output enable).
- void TIM_BDTRStructInit (TIM_BDTRInitTypeDef *TIM_BDTRInitStruct)

  Fills each TIM_BDTRInitStruct member with its default value.
- void TIM_CtrlPWMOutputs (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables the TIM peripheral Main Outputs.
- void TIM_SelectCOM (TIM_TypeDef *TIMx, FunctionalState NewState)

  Selects the TIM peripheral Commutation event.
- void TIM_CCPreloadControl (TIM_TypeDef *TIMx, FunctionalState NewState)

  Sets or Resets the TIM peripheral Capture Compare Preload Control bit.
- void TIM_ITConfig (TIM_TypeDef *TIMx, uint16_t TIM_IT, FunctionalState NewState)

  Enables or disables the specified TIM interrupts.
- void TIM_GenerateEvent (TIM_TypeDef *TIMx, uint16_t TIM_EventSource)

  Configures the TIMx event to be generate by software.
- FlagStatus TIM_GetFlagStatus (TIM_TypeDef *TIMx, uint16_t TIM_FLAG)

  Checks whether the specified TIM flag is set or not.
- void TIM_ClearFlag (TIM_TypeDef *TIMx, uint16_t TIM_FLAG)

  Clears the TIMx's pending flags.
- ITStatus TIM_GetITStatus (TIM_TypeDef *TIMx, uint16_t TIM_IT)

  Checks whether the TIM interrupt has occurred or not.
- void TIM_ClearITPendingBit (TIM_TypeDef *TIMx, uint16_t TIM_IT)

  Clears the TIMx's interrupt pending bits.
- void TIM_DMAConfig (TIM_TypeDef *TIMx, uint16_t TIM_DMABase, uint16_t TIM_DMABurstLength)

  Configures the TIMx's DMA interface.
- void TIM_DMACmd (TIM_TypeDef *TIMx, uint16_t TIM_DMASource, FunctionalState NewState)

  Enables or disables the TIMx's DMA Requests.
- void TIM_SelectCCDMA (TIM_TypeDef *TIMx, FunctionalState NewState)

  Selects the TIMx peripheral Capture Compare DMA source.
- void TIM_InternalClockConfig (TIM_TypeDef *TIMx)

  Configures the TIMx internal Clock.
- void TIM_ITRxExternalClockConfig (TIM_TypeDef *TIMx, uint16_t TIM_InputTriggerSource)

  Configures the TIMx Internal Trigger as External Clock.
- void TIM_TIxExternalClockConfig (TIM_TypeDef *TIMx, uint16_t TIM_TIxExternalCLKSource, uint16_t TIM_ICPolarity, uint16_t ICFilter)

  Configures the TIMx Trigger as External Clock.
- void TIM_ETRClockMode1Config (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the External clock Mode1.
- void TIM_ETRClockMode2Config (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the External clock Mode2.
- void TIM_SelectInputTrigger (TIM_TypeDef *TIMx, uint16_t TIM_InputTriggerSource)

  Selects the Input Trigger source.
- void TIM_SelectOutputTrigger (TIM_TypeDef *TIMx, uint16_t TIM_TRGOSource)

  Selects the TIMx Trigger Output Mode.

- void TIM_SelectSlaveMode (TIM_TypeDef *TIMx, uint16_t TIM_SlaveMode)

  Selects the TIMx Slave Mode.
- void TIM_SelectMasterSlaveMode (TIM_TypeDef *TIMx, uint16_t TIM_MasterSlaveMode)

  Sets or Resets the TIMx Master/Slave Mode.
- void TIM_ETRConfig (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the TIMx External Trigger (ETR).
- void TIM_EncoderInterfaceConfig (TIM_TypeDef *TIMx, uint16_t TIM_EncoderMode, uint16_t TIM_IC1↩ Polarity, uint16_t TIM_IC2Polarity)

  Configures the TIMx Encoder Interface.
- void TIM_SelectHallSensor (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables the TIMx's Hall sensor interface.
- void TIM_RemapConfig (TIM_TypeDef *TIMx, uint16_t TIM_Remap)

  Configures the TIM2, TIM5 and TIM11 Remapping input capabilities.

5.133.1 Detailed Description

TIM driver modules.

5.133.2 Function Documentation

5.133.2.1 TIM_ARRPreloadConfig()

```
void TIM_ARRPreloadConfig (
            TIM_TypeDef * TIMx,
            FunctionalState NewState )
```

Enables or disables TIMx peripheral Preload register on ARR.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
NewState	new state of the TIMx peripheral Preload register This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.2 TIM_BDTRConfig()

```
void TIM_BDTRConfig (
            TIM_TypeDef * TIMx,
            TIM_BDTRInitTypeDef * TIM_BDTRInitStruct )
```

Configures the Break feature, dead time, Lock level, OSSI/OSSR State and the AOE(automatic output enable).

Parameters

TIMx	where x can be 1 or 8 to select the TIM
TIM_BDTRInitStruct	pointer to a TIM_BDTRInitTypeDef structure that contains the BDTR Register configuration information for the TIM peripheral.

Return values

None	

5.133.2.3 TIM_BDTRStructInit()

```
void TIM_BDTRStructInit (
            TIM_BDTRInitTypeDef * TIM_BDTRInitStruct )
```

Fills each TIM_BDTRInitStruct member with its default value.

Parameters

TIM_BDTRInitStruct	pointer to a TIM_BDTRInitTypeDef structure which will be initialized.

Return values

None	

5.133.2.4 TIM_CCPreloadControl()

```
void TIM_CCPreloadControl (
            TIM_TypeDef * TIMx,
            FunctionalState NewState )
```

Sets or Resets the TIM peripheral Capture Compare Preload Control bit.

Parameters

TIMx	where x can be 1 or 8 to select the TIMx peripheral
NewState	new state of the Capture Compare Preload Control bit This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.5 TIM_CCxCmd()

```
void TIM_CCxCmd (
             TIM_TypeDef * TIMx,
             uint16_t TIM_Channel,
             uint16_t TIM_CCx )
```

Enables or disables the TIM Capture Compare Channel x.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_Channel	specifies the TIM Channel This parameter can be one of the following values: • TIM_Channel_1: TIM Channel 1 • TIM_Channel_2: TIM Channel 2 • TIM_Channel_3: TIM Channel 3 • TIM_Channel_4: TIM Channel 4
TIM_CCx	specifies the TIM Channel CCxE bit new state. This parameter can be: TIM_CCx_Enable or TIM_CCx_Disable.

Return values

None	

5.133.2.6 TIM_CCxNCmd()

```
void TIM_CCxNCmd (
             TIM_TypeDef * TIMx,
             uint16_t TIM_Channel,
             uint16_t TIM_CCxN )
```

Enables or disables the TIM Capture Compare Channel xN.

Parameters

TIMx	where x can be 1 or 8 to select the TIM peripheral.
TIM_Channel	specifies the TIM Channel This parameter can be one of the following values: • TIM_Channel_1: TIM Channel 1 • TIM_Channel_2: TIM Channel 2 • TIM_Channel_3: TIM Channel 3
TIM_CCxN	specifies the TIM Channel CCxNE bit new state. This parameter can be: TIM_CCxN_Enable or TIM_CCxN_Disable.

Return values

None	

5.133.2.7 TIM_ClearFlag()

```
void TIM_ClearFlag (
            TIM_TypeDef * TIMx,
            uint16_t TIM_FLAG )
```

Clears the TIMx's pending flags.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_FLAG	specifies the flag bit to clear. This parameter can be any combination of the following values: • TIM_FLAG_Update: TIM update Flag • TIM_FLAG_CC1: TIM Capture Compare 1 Flag • TIM_FLAG_CC2: TIM Capture Compare 2 Flag • TIM_FLAG_CC3: TIM Capture Compare 3 Flag • TIM_FLAG_CC4: TIM Capture Compare 4 Flag • TIM_FLAG_COM: TIM Commutation Flag • TIM_FLAG_Trigger: TIM Trigger Flag • TIM_FLAG_Break: TIM Break Flag • TIM_FLAG_CC1OF: TIM Capture Compare 1 over capture Flag • TIM_FLAG_CC2OF: TIM Capture Compare 2 over capture Flag • TIM_FLAG_CC3OF: TIM Capture Compare 3 over capture Flag • TIM_FLAG_CC4OF: TIM Capture Compare 4 over capture Flag

Note

TIM6 and TIM7 can have only one update flag.

TIM_FLAG_COM and TIM_FLAG_Break are used only with TIM1 and TIM8.

Return values

None	

5.133.2.8 TIM_ClearITPendingBit()

```
void TIM_ClearITPendingBit (
             TIM_TypeDef * TIMx,
             uint16_t TIM_IT )
```

Clears the TIMx's interrupt pending bits.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_IT	specifies the pending bit to clear. This parameter can be any combination of the following values: • TIM_IT_Update: TIM1 update Interrupt source • TIM_IT_CC1: TIM Capture Compare 1 Interrupt source • TIM_IT_CC2: TIM Capture Compare 2 Interrupt source • TIM_IT_CC3: TIM Capture Compare 3 Interrupt source • TIM_IT_CC4: TIM Capture Compare 4 Interrupt source • TIM_IT_COM: TIM Commutation Interrupt source • TIM_IT_Trigger: TIM Trigger Interrupt source • TIM_IT_Break: TIM Break Interrupt source

Note

TIM6 and TIM7 can generate only an update interrupt.

TIM_IT_COM and TIM_IT_Break are used only with TIM1 and TIM8.

Return values

None	

5.133.2.9 TIM_ClearOC1Ref()

```
void TIM_ClearOC1Ref (
             TIM_TypeDef * TIMx,
             uint16_t TIM_OCClear )
```

Clears or safeguards the OCREF1 signal on an external event.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_OCClear	new state of the Output Compare Clear Enable Bit. This parameter can be one of the following values: • TIM_OCClear_Enable: TIM Output clear enable
	• TIM_OCClear_Disable: TIM Output clear disable

Return values

None	

5.133.2.10 TIM_ClearOC2Ref()

```
void TIM_ClearOC2Ref (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCClear )
```

Clears or safeguards the OCREF2 signal on an external event.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCClear	new state of the Output Compare Clear Enable Bit. This parameter can be one of the following values: • TIM_OCClear_Enable: TIM Output clear enable • TIM_OCClear_Disable: TIM Output clear disable

Return values

None	

5.133.2.11 TIM_ClearOC3Ref()

```
void TIM_ClearOC3Ref (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCClear )
```

Clears or safeguards the OCREF3 signal on an external event.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCClear	new state of the Output Compare Clear Enable Bit. This parameter can be one of the following values: • TIM_OCClear_Enable: TIM Output clear enable • TIM_OCClear_Disable: TIM Output clear disable

Return values

None	

5.133.2.12 TIM_ClearOC4Ref()

```
void TIM_ClearOC4Ref (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCClear )
```

Clears or safeguards the OCREF4 signal on an external event.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCClear	new state of the Output Compare Clear Enable Bit. This parameter can be one of the following values: • TIM_OCClear_Enable: TIM Output clear enable • TIM_OCClear_Disable: TIM Output clear disable

Return values

None	

5.133.2.13 TIM_Cmd()

```
void TIM_Cmd (
            TIM_TypeDef * TIMx,
            FunctionalState NewState )
```

Enables or disables the specified TIM peripheral.

Parameters

TIMx	where x can be 1 to 14 to select the TIMx peripheral.
NewState	new state of the TIMx peripheral. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.14 TIM_CounterModeConfig()

```
void TIM_CounterModeConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_CounterMode )
```

Specifies the TIMx Counter Mode to be used.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_CounterMode	specifies the Counter Mode to be used This parameter can be one of the following values: • TIM_CounterMode_Up: TIM Up Counting Mode • TIM_CounterMode_Down: TIM Down Counting Mode • TIM_CounterMode_CenterAligned1: TIM Center Aligned Mode1 • TIM_CounterMode_CenterAligned2: TIM Center Aligned Mode2 • TIM_CounterMode_CenterAligned3: TIM Center Aligned Mode3

Return values

None	

5.133.2.15 TIM_CtrlPWMOutputs()

```
void TIM_CtrlPWMOutputs (
            TIM_TypeDef * TIMx,
            FunctionalState NewState )
```

Enables or disables the TIM peripheral Main Outputs.

Parameters

TIMx	where x can be 1 or 8 to select the TIMx peripheral.
NewState	new state of the TIM peripheral Main Outputs. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.16 TIM_DeInit()

```
void TIM_DeInit (
            TIM_TypeDef * TIMx )
```

Deinitializes the TIMx peripheral registers to their default reset values.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Return values

None	

5.133.2.17 TIM_DMACmd()

```
void TIM_DMACmd (
              TIM_TypeDef * TIMx,
              uint16_t TIM_DMASource,
              FunctionalState NewState )
```

Enables or disables the TIMx's DMA Requests.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 6, 7 or 8 to select the TIM peripheral.
TIM_DMASource	specifies the DMA Request sources. This parameter can be any combination of the following values: • TIM_DMA_Update: TIM update Interrupt source • TIM_DMA_CC1: TIM Capture Compare 1 DMA source • TIM_DMA_CC2: TIM Capture Compare 2 DMA source • TIM_DMA_CC3: TIM Capture Compare 3 DMA source • TIM_DMA_CC4: TIM Capture Compare 4 DMA source • TIM_DMA_COM: TIM Commutation DMA source • TIM_DMA_Trigger: TIM Trigger DMA source
NewState	new state of the DMA Request sources. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.18 TIM_DMAConfig()

```
void TIM_DMAConfig (
              TIM_TypeDef * TIMx,
```

```
            uint16_t TIM_DMABase,
            uint16_t TIM_DMABurstLength )
```

Configures the TIMx's DMA interface.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_DMABase	DMA Base address. This parameter can be one of the following values: • TIM_DMABase_CR1 • TIM_DMABase_CR2 • TIM_DMABase_SMCR • TIM_DMABase_DIER • TIM1_DMABase_SR • TIM_DMABase_EGR • TIM_DMABase_CCMR1 • TIM_DMABase_CCMR2 • TIM_DMABase_CCER • TIM_DMABase_CNT • TIM_DMABase_PSC • TIM_DMABase_ARR • TIM_DMABase_RCR • TIM_DMABase_CCR1 • TIM_DMABase_CCR2 • TIM_DMABase_CCR3 • TIM_DMABase_CCR4 • TIM_DMABase_BDTR • TIM_DMABase_DCR
TIM_DMABurstLength	DMA Burst length. This parameter can be one value between: TIM_DMABurstLength_1Transfer and TIM_DMABurstLength_18Transfers.

Return values

None	

5.133.2.19 TIM_EncoderInterfaceConfig()

```
void TIM_EncoderInterfaceConfig (
             TIM_TypeDef * TIMx,
             uint16_t TIM_EncoderMode,
             uint16_t TIM_IC1Polarity,
             uint16_t TIM_IC2Polarity )
```

Configures the TIMx Encoder Interface.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_EncoderMode	specifies the TIMx Encoder Mode. This parameter can be one of the following values: • TIM_EncoderMode_TI1: Counter counts on TI1FP1 edge depending on TI2FP2 level. • TIM_EncoderMode_TI2: Counter counts on TI2FP2 edge depending on TI1FP1 level. • TIM_EncoderMode_TI12: Counter counts on both TI1FP1 and TI2FP2 edges depending on the level of the other input.
TIM_IC1Polarity	specifies the IC1 Polarity This parameter can be one of the following values: • TIM_ICPolarity_Falling: IC Falling edge. • TIM_ICPolarity_Rising: IC Rising edge.
TIM_IC2Polarity	specifies the IC2 Polarity This parameter can be one of the following values: • TIM_ICPolarity_Falling: IC Falling edge. • TIM_ICPolarity_Rising: IC Rising edge.

Return values

None	

5.133.2.20 TIM_ETRClockMode1Config()

```
void TIM_ETRClockMode1Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ExtTRGPrescaler,
             uint16_t TIM_ExtTRGPolarity,
             uint16_t ExtTRGFilter )
```

Configures the External clock Mode1.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.

Parameters

TIM_ExtTRGPrescaler	The external Trigger Prescaler. This parameter can be one of the following values: • TIM_ExtTRGPSC_OFF: ETRP Prescaler OFF. • TIM_ExtTRGPSC_DIV2: ETRP frequency divided by 2. • TIM_ExtTRGPSC_DIV4: ETRP frequency divided by 4. • TIM_ExtTRGPSC_DIV8: ETRP frequency divided by 8.
TIM_ExtTRGPolarity	The external Trigger Polarity. This parameter can be one of the following values: • TIM_ExtTRGPolarity_Inverted: active low or falling edge active. • TIM_ExtTRGPolarity_NonInverted: active high or rising edge active.
ExtTRGFilter	External Trigger Filter. This parameter must be a value between 0x00 and 0x0F

Return values

None	

5.133.2.21 TIM_ETRClockMode2Config()

```
void TIM_ETRClockMode2Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ExtTRGPrescaler,
             uint16_t TIM_ExtTRGPolarity,
             uint16_t ExtTRGFilter )
```

Configures the External clock Mode2.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ExtTRGPrescaler	The external Trigger Prescaler. This parameter can be one of the following values: • TIM_ExtTRGPSC_OFF: ETRP Prescaler OFF. • TIM_ExtTRGPSC_DIV2: ETRP frequency divided by 2. • TIM_ExtTRGPSC_DIV4: ETRP frequency divided by 4. • TIM_ExtTRGPSC_DIV8: ETRP frequency divided by 8.
TIM_ExtTRGPolarity	The external Trigger Polarity. This parameter can be one of the following values: • TIM_ExtTRGPolarity_Inverted: active low or falling edge active. • TIM_ExtTRGPolarity_NonInverted: active high or rising edge active.
ExtTRGFilter	External Trigger Filter. This parameter must be a value between 0x00 and 0x0F

Return values

None	

5.133.2.22 TIM_ETRConfig()

```
void TIM_ETRConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ExtTRGPrescaler,
            uint16_t TIM_ExtTRGPolarity,
            uint16_t ExtTRGFilter )
```

Configures the TIMx External Trigger (ETR).

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ExtTRGPrescaler	The external Trigger Prescaler. This parameter can be one of the following values: • TIM_ExtTRGPSC_OFF: ETRP Prescaler OFF. • TIM_ExtTRGPSC_DIV2: ETRP frequency divided by 2. • TIM_ExtTRGPSC_DIV4: ETRP frequency divided by 4. • TIM_ExtTRGPSC_DIV8: ETRP frequency divided by 8.
TIM_ExtTRGPolarity	The external Trigger Polarity. This parameter can be one of the following values: • TIM_ExtTRGPolarity_Inverted: active low or falling edge active. • TIM_ExtTRGPolarity_NonInverted: active high or rising edge active.
ExtTRGFilter	External Trigger Filter. This parameter must be a value between 0x00 and 0x0F

Return values

None	

5.133.2.23 TIM_ForcedOC1Config()

```
void TIM_ForcedOC1Config (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ForcedAction )
```

Forces the TIMx output 1 waveform to active or inactive level.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_ForcedAction	specifies the forced Action to be set to the output waveform. This parameter can be one of the following values: • TIM_ForcedAction_Active: Force active level on OC1REF • TIM_ForcedAction_InActive: Force inactive level on OC1REF.

Return values

None	

5.133.2.24 TIM_ForcedOC2Config()

```
void TIM_ForcedOC2Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ForcedAction )
```

Forces the TIMx output 2 waveform to active or inactive level.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_ForcedAction	specifies the forced Action to be set to the output waveform. This parameter can be one of the following values: • TIM_ForcedAction_Active: Force active level on OC2REF • TIM_ForcedAction_InActive: Force inactive level on OC2REF.

Return values

None	

5.133.2.25 TIM_ForcedOC3Config()

```
void TIM_ForcedOC3Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ForcedAction )
```

Forces the TIMx output 3 waveform to active or inactive level.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ForcedAction	specifies the forced Action to be set to the output waveform. This parameter can be one of the following values: • TIM_ForcedAction_Active: Force active level on OC3REF • TIM_ForcedAction_InActive: Force inactive level on OC3REF.

Return values

None	

5.133.2.26 TIM_ForcedOC4Config()

```
void TIM_ForcedOC4Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ForcedAction )
```

Forces the TIMx output 4 waveform to active or inactive level.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ForcedAction	specifies the forced Action to be set to the output waveform. This parameter can be one of the following values: • TIM_ForcedAction_Active: Force active level on OC4REF • TIM_ForcedAction_InActive: Force inactive level on OC4REF.

Return values

None	

5.133.2.27 TIM_GenerateEvent()

```
void TIM_GenerateEvent (
             TIM_TypeDef * TIMx,
             uint16_t TIM_EventSource )
```

Configures the TIMx event to be generate by software.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_EventSource	specifies the event source. This parameter can be one or more of the following values: • TIM_EventSource_Update: Timer update Event source • TIM_EventSource_CC1: Timer Capture Compare 1 Event source • TIM_EventSource_CC2: Timer Capture Compare 2 Event source • TIM_EventSource_CC3: Timer Capture Compare 3 Event source • TIM_EventSource_CC4: Timer Capture Compare 4 Event source • TIM_EventSource_COM: Timer COM event source • TIM_EventSource_Trigger: Timer Trigger Event source • TIM_EventSource_Break: Timer Break event source

Note

TIM6 and TIM7 can only generate an update event.

TIM_EventSource_COM and TIM_EventSource_Break are used only with TIM1 and TIM8.

Return values

None	

5.133.2.28 TIM_GetCapture1()

```
uint32_t TIM_GetCapture1 (
             TIM_TypeDef * TIMx )
```

Gets the TIMx Input Capture 1 value.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.

Return values

Capture	Compare 1 Register value.

5.133.2.29 TIM_GetCapture2()

```
uint32_t TIM_GetCapture2 (
            TIM_TypeDef * TIMx )
```

Gets the TIMx Input Capture 2 value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.

Return values

Capture	Compare 2 Register value.

5.133.2.30 TIM_GetCapture3()

```
uint32_t TIM_GetCapture3 (
            TIM_TypeDef * TIMx )
```

Gets the TIMx Input Capture 3 value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.

Return values

Capture	Compare 3 Register value.

5.133.2.31 TIM_GetCapture4()

```
uint32_t TIM_GetCapture4 (
            TIM_TypeDef * TIMx )
```

Gets the TIMx Input Capture 4 value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.

Return values

Capture	Compare 4 Register value.

5.133.2.32 TIM_GetCounter()

```
uint32_t TIM_GetCounter (
            TIM_TypeDef * TIMx )
```

Gets the TIMx Counter value.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Return values

Counter	Register value

5.133.2.33 TIM_GetFlagStatus()

```
FlagStatus TIM_GetFlagStatus (
            TIM_TypeDef * TIMx,
            uint16_t TIM_FLAG )
```

Checks whether the specified TIM flag is set or not.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_FLAG	specifies the flag to check. This parameter can be one of the following values: • TIM_FLAG_Update: TIM update Flag • TIM_FLAG_CC1: TIM Capture Compare 1 Flag • TIM_FLAG_CC2: TIM Capture Compare 2 Flag • TIM_FLAG_CC3: TIM Capture Compare 3 Flag • TIM_FLAG_CC4: TIM Capture Compare 4 Flag • TIM_FLAG_COM: TIM Commutation Flag • TIM_FLAG_Trigger: TIM Trigger Flag • TIM_FLAG_Break: TIM Break Flag • TIM_FLAG_CC1OF: TIM Capture Compare 1 over capture Flag • TIM_FLAG_CC2OF: TIM Capture Compare 2 over capture Flag • TIM_FLAG_CC3OF: TIM Capture Compare 3 over capture Flag • TIM_FLAG_CC4OF: TIM Capture Compare 4 over capture Flag

Note

TIM6 and TIM7 can have only one update flag.

TIM_FLAG_COM and TIM_FLAG_Break are used only with TIM1 and TIM8.

Return values

The	new state of TIM_FLAG (SET or RESET).

5.133.2.34 TIM_GetITStatus()

```
ITStatus TIM_GetITStatus (
             TIM_TypeDef * TIMx,
             uint16_t TIM_IT )
```

Checks whether the TIM interrupt has occurred or not.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_IT	specifies the TIM interrupt source to check. This parameter can be one of the following values: • TIM_IT_Update: TIM update Interrupt source • TIM_IT_CC1: TIM Capture Compare 1 Interrupt source • TIM_IT_CC2: TIM Capture Compare 2 Interrupt source • TIM_IT_CC3: TIM Capture Compare 3 Interrupt source • TIM_IT_CC4: TIM Capture Compare 4 Interrupt source • TIM_IT_COM: TIM Commutation Interrupt source • TIM_IT_Trigger: TIM Trigger Interrupt source • TIM_IT_Break: TIM Break Interrupt source

Note

TIM6 and TIM7 can generate only an update interrupt.

TIM_IT_COM and TIM_IT_Break are used only with TIM1 and TIM8.

Return values

The	new state of the TIM_IT(SET or RESET).

5.133.2.35 TIM_GetPrescaler()

```
uint16_t TIM_GetPrescaler (
            TIM_TypeDef * TIMx )
```

Gets the TIMx Prescaler value.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Return values

Prescaler	Register value.

5.133.2.36 TIM_ICInit()

```
void TIM_ICInit (
            TIM_TypeDef * TIMx,
            TIM_ICInitTypeDef * TIM_ICInitStruct )
```

Initializes the TIM peripheral according to the specified parameters in the TIM_ICInitStruct.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_ICInitStruct	pointer to a TIM_ICInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.133.2.37 TIM_ICStructInit()

```
void TIM_ICStructInit (
            TIM_ICInitTypeDef * TIM_ICInitStruct )
```

Fills each TIM_ICInitStruct member with its default value.

Parameters

TIM_ICInitStruct	pointer to a TIM_ICInitTypeDef structure which will be initialized.

Return values

None	

5.133.2.38 TIM_InternalClockConfig()

```
void TIM_InternalClockConfig (
            TIM_TypeDef * TIMx )
```

Configures the TIMx internal Clock.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.

Return values

None	

5.133.2.39 TIM_ITConfig()

```
void TIM_ITConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_IT,
            FunctionalState NewState )
```

Enables or disables the specified TIM interrupts.

Parameters

TIMx	where x can be 1 to 14 to select the TIMx peripheral.
TIM_IT	specifies the TIM interrupts sources to be enabled or disabled. This parameter can be any combination of the following values: • TIM_IT_Update: TIM update Interrupt source • TIM_IT_CC1: TIM Capture Compare 1 Interrupt source • TIM_IT_CC2: TIM Capture Compare 2 Interrupt source • TIM_IT_CC3: TIM Capture Compare 3 Interrupt source • TIM_IT_CC4: TIM Capture Compare 4 Interrupt source • TIM_IT_COM: TIM Commutation Interrupt source • TIM_IT_Trigger: TIM Trigger Interrupt source • TIM_IT_Break: TIM Break Interrupt source

Note

For TIM6 and TIM7 only the parameter TIM_IT_Update can be used

For TIM9 and TIM12 only one of the following parameters can be used: TIM_IT_Update, TIM_IT_CC1, TIM↩ _IT_CC2 or TIM_IT_Trigger.

For TIM10, TIM11, TIM13 and TIM14 only one of the following parameters can be used: TIM_IT_Update or TIM_IT_CC1

TIM_IT_COM and TIM_IT_Break can be used only with TIM1 and TIM8

Parameters

NewState	new state of the TIM interrupts. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.40 TIM_ITRxExternalClockConfig()

```
void TIM_ITRxExternalClockConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_InputTriggerSource )
```

Configures the TIMx Internal Trigger as External Clock.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_InputTriggerSource	Trigger source. This parameter can be one of the following values: • TIM_TS_ITR0: Internal Trigger 0 • TIM_TS_ITR1: Internal Trigger 1 • TIM_TS_ITR2: Internal Trigger 2 • TIM_TS_ITR3: Internal Trigger 3

Return values

None	

5.133.2.41 TIM_OC1FastConfig()

```
void TIM_OC1FastConfig (
```

```
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCFast )
```

Configures the TIMx Output Compare 1 Fast feature.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_OCFast	new state of the Output Compare Fast Enable Bit. This parameter can be one of the following values: • TIM_OCFast_Enable: TIM output compare fast enable • TIM_OCFast_Disable: TIM output compare fast disable

Return values

None	

5.133.2.42 TIM_OC1Init()

```
void TIM_OC1Init (
            TIM_TypeDef * TIMx,
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Initializes the TIMx Channel1 according to the specified parameters in the TIM_OCInitStruct.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.133.2.43 TIM_OC1NPolarityConfig()

```
void TIM_OC1NPolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCNPolarity )
```

Configures the TIMx Channel 1N polarity.

Parameters

TIMx	where x can be 1 or 8 to select the TIM peripheral.
TIM_OCNPolarity	specifies the OC1N Polarity This parameter can be one of the following values: • TIM_OCNPolarity_High: Output Compare active high • TIM_OCNPolarity_Low: Output Compare active low

Return values

None	

5.133.2.44 TIM_OC1PolarityConfig()

```
void TIM_OC1PolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPolarity )
```

Configures the TIMx channel 1 polarity.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_OCPolarity	specifies the OC1 Polarity This parameter can be one of the following values: • TIM_OCPolarity_High: Output Compare active high • TIM_OCPolarity_Low: Output Compare active low

Return values

None	

5.133.2.45 TIM_OC1PreloadConfig()

```
void TIM_OC1PreloadConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPreload )
```

Enables or disables the TIMx peripheral Preload register on CCR1.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.

Parameters

TIM_OCPreload	new state of the TIMx peripheral Preload register This parameter can be one of the following values: • TIM_OCPreload_Enable • TIM_OCPreload_Disable

Return values

None	

5.133.2.46 TIM_OC2FastConfig()

```
void TIM_OC2FastConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCFast )
```

Configures the TIMx Output Compare 2 Fast feature.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCFast	new state of the Output Compare Fast Enable Bit. This parameter can be one of the following values: • TIM_OCFast_Enable: TIM output compare fast enable • TIM_OCFast_Disable: TIM output compare fast disable

Return values

None	

5.133.2.47 TIM_OC2Init()

```
void TIM_OC2Init (
            TIM_TypeDef * TIMx,
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Initializes the TIMx Channel2 according to the specified parameters in the TIM_OCInitStruct.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.133.2.48 TIM_OC2NPolarityConfig()

```
void TIM_OC2NPolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCNPolarity )
```

Configures the TIMx Channel 2N polarity.

Parameters

TIMx	where x can be 1 or 8 to select the TIM peripheral.
TIM_OCNPolarity	specifies the OC2N Polarity This parameter can be one of the following values: • TIM_OCNPolarity_High: Output Compare active high • TIM_OCNPolarity_Low: Output Compare active low

Return values

None	

5.133.2.49 TIM_OC2PolarityConfig()

```
void TIM_OC2PolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPolarity )
```

Configures the TIMx channel 2 polarity.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCPolarity	specifies the OC2 Polarity This parameter can be one of the following values: • TIM_OCPolarity_High: Output Compare active high • TIM_OCPolarity_Low: Output Compare active low

Return values

None	

5.133.2.50 TIM_OC2PreloadConfig()

```
void TIM_OC2PreloadConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPreload )
```

Enables or disables the TIMx peripheral Preload register on CCR2.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCPreload	new state of the TIMx peripheral Preload register This parameter can be one of the following values: • TIM_OCPreload_Enable • TIM_OCPreload_Disable

Return values

None	

5.133.2.51 TIM_OC3FastConfig()

```
void TIM_OC3FastConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCFast )
```

Configures the TIMx Output Compare 3 Fast feature.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCFast	new state of the Output Compare Fast Enable Bit. This parameter can be one of the following values: • TIM_OCFast_Enable: TIM output compare fast enable • TIM_OCFast_Disable: TIM output compare fast disable

Return values

None	

5.133.2.52 TIM_OC3Init()

```
void TIM_OC3Init (
            TIM_TypeDef * TIMx,
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Initializes the TIMx Channel3 according to the specified parameters in the TIM_OCInitStruct.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.133.2.53 TIM_OC3NPolarityConfig()

```
void TIM_OC3NPolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCNPolarity )
```

Configures the TIMx Channel 3N polarity.

Parameters

TIMx	where x can be 1 or 8 to select the TIM peripheral.
TIM_OCNPolarity	specifies the OC3N Polarity This parameter can be one of the following values: • TIM_OCNPolarity_High: Output Compare active high • TIM_OCNPolarity_Low: Output Compare active low

Return values

None	

5.133.2.54 TIM_OC3PolarityConfig()

```
void TIM_OC3PolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPolarity )
```

Configures the TIMx channel 3 polarity.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCPolarity	specifies the OC3 Polarity This parameter can be one of the following values: • TIM_OCPolarity_High: Output Compare active high • TIM_OCPolarity_Low: Output Compare active low

Return values

None	

5.133.2.55 TIM_OC3PreloadConfig()

```
void TIM_OC3PreloadConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPreload )
```

Enables or disables the TIMx peripheral Preload register on CCR3.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCPreload	new state of the TIMx peripheral Preload register This parameter can be one of the following values: • TIM_OCPreload_Enable • TIM_OCPreload_Disable

Return values

None	

5.133.2.56 TIM_OC4FastConfig()

```
void TIM_OC4FastConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCFast )
```

Configures the TIMx Output Compare 4 Fast feature.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.

Parameters

TIM_OCFast	new state of the Output Compare Fast Enable Bit. This parameter can be one of the following values: • TIM_OCFast_Enable: TIM output compare fast enable • TIM_OCFast_Disable: TIM output compare fast disable

Return values

None	

5.133.2.57 TIM_OC4Init()

```
void TIM_OC4Init (
            TIM_TypeDef * TIMx,
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Initializes the TIMx Channel4 according to the specified parameters in the TIM_OCInitStruct.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.133.2.58 TIM_OC4PolarityConfig()

```
void TIM_OC4PolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPolarity )
```

Configures the TIMx channel 4 polarity.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCPolarity	specifies the OC4 Polarity This parameter can be one of the following values: • TIM_OCPolarity_High: Output Compare active high • TIM_OCPolarity_Low: Output Compare active low

Return values

None	

5.133.2.59 TIM_OC4PreloadConfig()

```
void TIM_OC4PreloadConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPreload )
```

Enables or disables the TIMx peripheral Preload register on CCR4.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCPreload	new state of the TIMx peripheral Preload register This parameter can be one of the following values: • TIM_OCPreload_Enable • TIM_OCPreload_Disable

Return values

None	

5.133.2.60 TIM_OCStructInit()

```
void TIM_OCStructInit (
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Fills each TIM_OCInitStruct member with its default value.

Parameters

TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure which will be initialized.

Return values

None	

5.133.2.61 TIM_PrescalerConfig()

```
void TIM_PrescalerConfig (
             TIM_TypeDef * TIMx,
             uint16_t Prescaler,
             uint16_t TIM_PSCReloadMode )
```

Configures the TIMx Prescaler.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
Prescaler	specifies the Prescaler Register value
TIM_PSCReloadMode	specifies the TIM Prescaler Reload mode This parameter can be one of the following values: • TIM_PSCReloadMode_Update: The Prescaler is loaded at the update event. • TIM_PSCReloadMode_Immediate: The Prescaler is loaded immediatly.

Return values

None	

5.133.2.62 TIM_PWMIConfig()

```
void TIM_PWMIConfig (
             TIM_TypeDef * TIMx,
             TIM_ICInitTypeDef * TIM_ICInitStruct )
```

Configures the TIM peripheral according to the specified parameters in the TIM_ICInitStruct to measure an external PWM signal.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5,8, 9 or 12 to select the TIM peripheral.
TIM_ICInitStruct	pointer to a TIM_ICInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.133.2.63 TIM_RemapConfig()

```
void TIM_RemapConfig (
```

```
                TIM_TypeDef * TIMx,
                uint16_t TIM_Remap )
```

Configures the TIM2, TIM5 and TIM11 Remapping input capabilities.

Parameters

TIMx	where x can be 2, 5 or 11 to select the TIM peripheral.
TIM_Remap	specifies the TIM input remapping source. This parameter can be one of the following values: • TIM2_TIM8_TRGO: TIM2 ITR1 input is connected to TIM8 Trigger output(default) • TIM2_ETH_PTP: TIM2 ITR1 input is connected to ETH PTP trogger output. • TIM2_USBFS_SOF: TIM2 ITR1 input is connected to USB FS SOF. • TIM2_USBHS_SOF: TIM2 ITR1 input is connected to USB HS SOF. • TIM5_GPIO: TIM5 CH4 input is connected to dedicated Timer pin(default) • TIM5_LSI: TIM5 CH4 input is connected to LSI clock. • TIM5_LSE: TIM5 CH4 input is connected to LSE clock. • TIM5_RTC: TIM5 CH4 input is connected to RTC Output event. • TIM11_GPIO: TIM11 CH4 input is connected to dedicated Timer pin(default) • TIM11_HSE: TIM11 CH4 input is connected to HSE_RTC clock (HSE divided by a programmable prescaler)

Return values

None	

5.133.2.64 TIM_SelectCCDMA()

```
void TIM_SelectCCDMA (
                TIM_TypeDef * TIMx,
                FunctionalState NewState )
```

Selects the TIMx peripheral Capture Compare DMA source.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
NewState	new state of the Capture Compare DMA source This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.65 TIM_SelectCOM()

```
void TIM_SelectCOM (
            TIM_TypeDef * TIMx,
            FunctionalState NewState )
```

Selects the TIM peripheral Commutation event.

Parameters

TIMx	where x can be 1 or 8 to select the TIMx peripheral
NewState	new state of the Commutation event. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.66 TIM_SelectHallSensor()

```
void TIM_SelectHallSensor (
            TIM_TypeDef * TIMx,
            FunctionalState NewState )
```

Enables or disables the TIMx's Hall sensor interface.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
NewState	new state of the TIMx Hall sensor interface. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.67 TIM_SelectInputTrigger()

```
void TIM_SelectInputTrigger (
            TIM_TypeDef * TIMx,
            uint16_t TIM_InputTriggerSource )
```

Selects the Input Trigger source.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9, 10, 11, 12, 13 or 14 to select the TIM peripheral.
TIM_InputTriggerSource	The Input Trigger source. This parameter can be one of the following values: • TIM_TS_ITR0: Internal Trigger 0 • TIM_TS_ITR1: Internal Trigger 1 • TIM_TS_ITR2: Internal Trigger 2 • TIM_TS_ITR3: Internal Trigger 3 • TIM_TS_TI1F_ED: TI1 Edge Detector • TIM_TS_TI1FP1: Filtered Timer Input 1 • TIM_TS_TI2FP2: Filtered Timer Input 2 • TIM_TS_ETRF: External Trigger input

Return values

None	

5.133.2.68 TIM_SelectMasterSlaveMode()

```
void TIM_SelectMasterSlaveMode (
             TIM_TypeDef * TIMx,
             uint16_t TIM_MasterSlaveMode )
```

Sets or Resets the TIMx Master/Slave Mode.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_MasterSlaveMode	specifies the Timer Master Slave Mode. This parameter can be one of the following values: • TIM_MasterSlaveMode_Enable: synchronization between the current timer and its slaves (through TRGO) • TIM_MasterSlaveMode_Disable: No action

Return values

None	

5.133.2.69 TIM_SelectOCxM()

```
void TIM_SelectOCxM (
             TIM_TypeDef * TIMx,
             uint16_t TIM_Channel,
             uint16_t TIM_OCMode )
```

Selects the TIM Output Compare Mode.

Note

This function disables the selected channel before changing the Output Compare Mode. If needed, user has to enable this channel using TIM_CCxCmd() and TIM_CCxNCmd() functions.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_Channel	specifies the TIM Channel This parameter can be one of the following values: • TIM_Channel_1: TIM Channel 1 • TIM_Channel_2: TIM Channel 2 • TIM_Channel_3: TIM Channel 3 • TIM_Channel_4: TIM Channel 4
TIM_OCMode	specifies the TIM Output Compare Mode. This parameter can be one of the following values: • TIM_OCMode_Timing • TIM_OCMode_Active • TIM_OCMode_Toggle • TIM_OCMode_PWM1 • TIM_OCMode_PWM2 • TIM_ForcedAction_Active • TIM_ForcedAction_InActive

Return values

None	

5.133.2.70 TIM_SelectOnePulseMode()

```
void TIM_SelectOnePulseMode (
             TIM_TypeDef * TIMx,
             uint16_t TIM_OPMode )
```

Selects the TIMx's One Pulse Mode.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_OPMode	specifies the OPM Mode to be used. This parameter can be one of the following values: • TIM_OPMode_Single • TIM_OPMode_Repetitive

Return values

None	

5.133.2.71 TIM_SelectOutputTrigger()

```
void TIM_SelectOutputTrigger (
             TIM_TypeDef * TIMx,
             uint16_t TIM_TRGOSource )
```

Selects the TIMx Trigger Output Mode.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 6, 7 or 8 to select the TIM peripheral.
TIM_TRGOSource	specifies the Trigger Output source. This parameter can be one of the following values:

- For all TIMx
  - TIM_TRGOSource_Reset: The UG bit in the TIM_EGR register is used as the trigger output(TRGO)
  - TIM_TRGOSource_Enable: The Counter Enable CEN is used as the trigger output(TRGO)
  - TIM_TRGOSource_Update: The update event is selected as the trigger output(TRGO)
- For all TIMx except TIM6 and TIM7
  - TIM_TRGOSource_OC1: The trigger output sends a positive pulse when the CC1IF flag is to be set, as soon as a capture or compare match occurs(TRGO)
  - TIM_TRGOSource_OC1Ref: OC1REF signal is used as the trigger output(TRGO)
  - TIM_TRGOSource_OC2Ref: OC2REF signal is used as the trigger output(TRGO)
  - TIM_TRGOSource_OC3Ref: OC3REF signal is used as the trigger output(TRGO)
  - TIM_TRGOSource_OC4Ref: OC4REF signal is used as the trigger output(TRGO)

Return values

None	

5.133.2.72 TIM_SelectSlaveMode()

```
void TIM_SelectSlaveMode (
             TIM_TypeDef * TIMx,
             uint16_t TIM_SlaveMode )
```

Selects the TIMx Slave Mode.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_SlaveMode	specifies the Timer Slave Mode. This parameter can be one of the following values: • TIM_SlaveMode_Reset: Rising edge of the selected trigger signal(TRGI) reinitialize the counter and triggers an update of the registers • TIM_SlaveMode_Gated: The counter clock is enabled when the trigger signal (TRGI) is high • TIM_SlaveMode_Trigger: The counter starts at a rising edge of the trigger TRGI • TIM_SlaveMode_External1: Rising edges of the selected trigger (TRGI) clock the counter

Return values

None	

5.133.2.73 TIM_SetAutoreload()

```
void TIM_SetAutoreload (
             TIM_TypeDef * TIMx,
             uint32_t Autoreload )
```

Sets the TIMx Autoreload Register value.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
Autoreload	specifies the Autoreload register new value.

Return values

None	

5.133.2.74 TIM_SetClockDivision()

```
void TIM_SetClockDivision (
            TIM_TypeDef * TIMx,
            uint16_t TIM_CKD )
```

Sets the TIMx Clock Division value.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_CKD	specifies the clock division value. This parameter can be one of the following value: • TIM_CKD_DIV1: TDTS = Tck_tim • TIM_CKD_DIV2: TDTS = 2∗Tck_tim • TIM_CKD_DIV4: TDTS = 4∗Tck_tim

Return values

None	

5.133.2.75 TIM_SetCompare1()

```
void TIM_SetCompare1 (
            TIM_TypeDef * TIMx,
            uint32_t Compare1 )
```

Sets the TIMx Capture Compare1 Register value.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
Compare1	specifies the Capture Compare1 register new value.

Return values

None	

5.133.2.76 TIM_SetCompare2()

```
void TIM_SetCompare2 (
            TIM_TypeDef * TIMx,
            uint32_t Compare2 )
```

Sets the TIMx Capture Compare2 Register value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
Compare2	specifies the Capture Compare2 register new value.

Return values

None	

5.133.2.77 TIM_SetCompare3()

```
void TIM_SetCompare3 (
             TIM_TypeDef * TIMx,
             uint32_t Compare3 )
```

Sets the TIMx Capture Compare3 Register value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
Compare3	specifies the Capture Compare3 register new value.

Return values

None	

5.133.2.78 TIM_SetCompare4()

```
void TIM_SetCompare4 (
             TIM_TypeDef * TIMx,
             uint32_t Compare4 )
```

Sets the TIMx Capture Compare4 Register value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
Compare4	specifies the Capture Compare4 register new value.

Return values

None	

5.133.2.79 TIM_SetCounter()

```
void TIM_SetCounter (
            TIM_TypeDef * TIMx,
            uint32_t Counter )
```

Sets the TIMx Counter Register value.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
Counter	specifies the Counter register new value.

Return values

None	

5.133.2.80 TIM_SetIC1Prescaler()

```
void TIM_SetIC1Prescaler (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ICPSC )
```

Sets the TIMx Input Capture 1 prescaler.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_ICPSC	specifies the Input Capture1 prescaler new value. This parameter can be one of the following values: • TIM_ICPSC_DIV1: no prescaler • TIM_ICPSC_DIV2: capture is done once every 2 events • TIM_ICPSC_DIV4: capture is done once every 4 events • TIM_ICPSC_DIV8: capture is done once every 8 events

Return values

None	

5.133.2.81 TIM_SetIC2Prescaler()

```
void TIM_SetIC2Prescaler (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ICPSC )
```

Sets the TIMx Input Capture 2 prescaler.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_ICPSC	specifies the Input Capture2 prescaler new value. This parameter can be one of the following values: • TIM_ICPSC_DIV1: no prescaler • TIM_ICPSC_DIV2: capture is done once every 2 events • TIM_ICPSC_DIV4: capture is done once every 4 events • TIM_ICPSC_DIV8: capture is done once every 8 events

Return values

None	

5.133.2.82 TIM_SetIC3Prescaler()

```
void TIM_SetIC3Prescaler (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ICPSC )
```

Sets the TIMx Input Capture 3 prescaler.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ICPSC	specifies the Input Capture3 prescaler new value. This parameter can be one of the following values: • TIM_ICPSC_DIV1: no prescaler • TIM_ICPSC_DIV2: capture is done once every 2 events • TIM_ICPSC_DIV4: capture is done once every 4 events • TIM_ICPSC_DIV8: capture is done once every 8 events

Return values

None	

5.133.2.83 TIM_SetIC4Prescaler()

```
void TIM_SetIC4Prescaler (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ICPSC )
```

Sets the TIMx Input Capture 4 prescaler.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ICPSC	specifies the Input Capture4 prescaler new value. This parameter can be one of the following values: • TIM_ICPSC_DIV1: no prescaler • TIM_ICPSC_DIV2: capture is done once every 2 events • TIM_ICPSC_DIV4: capture is done once every 4 events • TIM_ICPSC_DIV8: capture is done once every 8 events

Return values

None	

5.133.2.84 TIM_TimeBaseInit()

```
void TIM_TimeBaseInit (
            TIM_TypeDef * TIMx,
            TIM_TimeBaseInitTypeDef * TIM_TimeBaseInitStruct )
```

Initializes the TIMx Time Base Unit peripheral according to the specified parameters in the TIM_TimeBaseInitStruct.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_TimeBaseInitStruct	pointer to a TIM_TimeBaseInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.133.2.85 TIM_TimeBaseStructInit()

```
void TIM_TimeBaseStructInit (
            TIM_TimeBaseInitTypeDef * TIM_TimeBaseInitStruct )
```

Fills each TIM_TimeBaseInitStruct member with its default value.

Parameters

TIM_TimeBaseInitStruct	: pointer to a TIM_TimeBaseInitTypeDef structure which will be initialized.

Return values

None	

5.133.2.86 TIM_TIxExternalClockConfig()

```
void TIM_TIxExternalClockConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_TIxExternalCLKSource,
            uint16_t TIM_ICPolarity,
            uint16_t ICFilter )
```

Configures the TIMx Trigger as External Clock.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9, 10, 11, 12, 13 or 14 to select the TIM peripheral.
TIM_TIxExternalCLKSource	Trigger source. This parameter can be one of the following values: • TIM_TIxExternalCLK1Source_TI1ED: TI1 Edge Detector • TIM_TIxExternalCLK1Source_TI1: Filtered Timer Input 1 • TIM_TIxExternalCLK1Source_TI2: Filtered Timer Input 2
TIM_ICPolarity	specifies the TIx Polarity. This parameter can be one of the following values: • TIM_ICPolarity_Rising • TIM_ICPolarity_Falling
ICFilter	specifies the filter value. This parameter must be a value between 0x0 and 0xF.

Return values

None	

5.133.2.87 TIM_UpdateDisableConfig()

```
void TIM_UpdateDisableConfig (
             TIM_TypeDef * TIMx,
             FunctionalState NewState )
```

Enables or Disables the TIMx Update event.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
NewState	new state of the TIMx UDIS bit This parameter can be: ENABLE or DISABLE.

Return values

None	

5.133.2.88 TIM_UpdateRequestConfig()

```
void TIM_UpdateRequestConfig (
             TIM_TypeDef * TIMx,
             uint16_t TIM_UpdateSource )
```

Configures the TIMx Update Request Interrupt source.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_UpdateSource	specifies the Update source. This parameter can be one of the following values: • TIM_UpdateSource_Global: Source of update is the counter overflow/underflow or the setting of UG bit, or an update generation through the slave mode controller. • TIM_UpdateSource_Regular: Source of update is counter overflow/underflow.

Return values

None	

5.134 TIM_Private_Functions

Modules

- TimeBase management functions

  TimeBase management functions.

- Output Compare management functions

  Output Compare management functions.
- Input Capture management functions

  Input Capture management functions.
- Advanced-control timers (TIM1 and TIM8) specific features

  Advanced-control timers (TIM1 and TIM8) specific features.
- Interrupts DMA and flags management functions

  Interrupts, DMA and flags management functions.
- Clocks management functions

  Clocks management functions.
- Synchronization management functions

  Synchronization management functions.

  Specific interface management functions.
- Specific remapping management function

  Specific remapping management function.

5.134.1 Detailed Description

5.135 TimeBase management functions

TimeBase management functions.

Functions

- void TIM_DeInit (TIM_TypeDef ∗TIMx)

  Deinitializes the TIMx peripheral registers to their default reset values.
- void TIM_TimeBaseInit (TIM_TypeDef ∗TIMx, TIM_TimeBaseInitTypeDef ∗TIM_TimeBaseInitStruct)

  Initializes the TIMx Time Base Unit peripheral according to the specified parameters in the TIM_TimeBaseInitStruct.
- void TIM_TimeBaseStructInit (TIM_TimeBaseInitTypeDef ∗TIM_TimeBaseInitStruct)

  Fills each TIM_TimeBaseInitStruct member with its default value.
- void TIM_PrescalerConfig (TIM_TypeDef ∗TIMx, uint16_t Prescaler, uint16_t TIM_PSCReloadMode)

  Configures the TIMx Prescaler.
- void TIM_CounterModeConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_CounterMode)

  Specifies the TIMx Counter Mode to be used.
- void TIM_SetCounter (TIM_TypeDef ∗TIMx, uint32_t Counter)

  Sets the TIMx Counter Register value.
- void TIM_SetAutoreload (TIM_TypeDef ∗TIMx, uint32_t Autoreload)

  Sets the TIMx Autoreload Register value.
- uint32_t TIM_GetCounter (TIM_TypeDef ∗TIMx)

  Gets the TIMx Counter value.
- uint16_t TIM_GetPrescaler (TIM_TypeDef ∗TIMx)

  Gets the TIMx Prescaler value.
- void TIM_UpdateDisableConfig (TIM_TypeDef ∗TIMx, FunctionalState NewState)

  Enables or Disables the TIMx Update event.
- void TIM_UpdateRequestConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_UpdateSource)

  Configures the TIMx Update Request Interrupt source.
- void TIM_ARRPreloadConfig (TIM_TypeDef ∗TIMx, FunctionalState NewState)

Enables or disables TIMx peripheral Preload register on ARR.

- void TIM_SelectOnePulseMode (TIM_TypeDef *TIMx, uint16_t TIM_OPMode)

  Selects the TIMx's One Pulse Mode.
- void TIM_SetClockDivision (TIM_TypeDef *TIMx, uint16_t TIM_CKD)

  Sets the TIMx Clock Division value.
- void TIM_Cmd (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables the specified TIM peripheral.

5.135.1 Detailed Description

TimeBase management functions.

```
 ===================================================================================
                        TimeBase management functions
 ===================================================================================

       ===================================================================
              TIM Driver: how to use it in Timing(Time base) Mode
       ===================================================================
       To use the Timer in Timing(Time base) mode, the following steps are mandatory:

       1. Enable TIM clock using RCC_APBxPeriphClockCmd(RCC_APBxPeriph_TIMx, ENABLE) function

       2. Fill the TIM_TimeBaseInitStruct with the desired parameters.

       3. Call TIM_TimeBaseInit(TIMx, &TIM_TimeBaseInitStruct) to configure the Time Base unit
          with the corresponding configuration

       4. Enable the NVIC if you need to generate the update interrupt.

       5. Enable the corresponding interrupt using the function TIM_ITConfig(TIMx, TIM_IT_Update)

       6. Call the TIM_Cmd(ENABLE) function to enable the TIM counter.

       Note1: All other functions can be used separately to modify, if needed,
          a specific feature of the Timer.
```

5.135.2 Function Documentation

5.135.2.1 TIM_ARRPreloadConfig()

```
void TIM_ARRPreloadConfig (
             TIM_TypeDef * TIMx,
             FunctionalState NewState )
```

Enables or disables TIMx peripheral Preload register on ARR.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
NewState	new state of the TIMx peripheral Preload register This parameter can be: ENABLE or DISABLE.

Return values

None	

5.135.2.2 TIM_Cmd()

```
void TIM_Cmd (
              TIM_TypeDef * TIMx,
              FunctionalState NewState )
```

Enables or disables the specified TIM peripheral.

Parameters

TIMx	where x can be 1 to 14 to select the TIMx peripheral.
NewState	new state of the TIMx peripheral. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.135.2.3 TIM_CounterModeConfig()

```
void TIM_CounterModeConfig (
              TIM_TypeDef * TIMx,
              uint16_t TIM_CounterMode )
```

Specifies the TIMx Counter Mode to be used.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_CounterMode	specifies the Counter Mode to be used This parameter can be one of the following values: • TIM_CounterMode_Up: TIM Up Counting Mode • TIM_CounterMode_Down: TIM Down Counting Mode • TIM_CounterMode_CenterAligned1: TIM Center Aligned Mode1 • TIM_CounterMode_CenterAligned2: TIM Center Aligned Mode2 • TIM_CounterMode_CenterAligned3: TIM Center Aligned Mode3

Return values

None	

5.135.2.4 TIM_DeInit()

```
void TIM_DeInit (
            TIM_TypeDef * TIMx )
```

Deinitializes the TIMx peripheral registers to their default reset values.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Return values

None	

5.135.2.5 TIM_GetCounter()

```
uint32_t TIM_GetCounter (
            TIM_TypeDef * TIMx )
```

Gets the TIMx Counter value.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Return values

Counter	Register value

5.135.2.6 TIM_GetPrescaler()

```
uint16_t TIM_GetPrescaler (
            TIM_TypeDef * TIMx )
```

Gets the TIMx Prescaler value.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Return values

Prescaler	Register value.

5.135.2.7 TIM_PrescalerConfig()

```
void TIM_PrescalerConfig (
             TIM_TypeDef * TIMx,
             uint16_t Prescaler,
             uint16_t TIM_PSCReloadMode )
```

Configures the TIMx Prescaler.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
Prescaler	specifies the Prescaler Register value
TIM_PSCReloadMode	specifies the TIM Prescaler Reload mode This parameter can be one of the following values: • TIM_PSCReloadMode_Update: The Prescaler is loaded at the update event. • TIM_PSCReloadMode_Immediate: The Prescaler is loaded immediatly.

Return values

None	

5.135.2.8 TIM_SelectOnePulseMode()

```
void TIM_SelectOnePulseMode (
             TIM_TypeDef * TIMx,
             uint16_t TIM_OPMode )
```

Selects the TIMx's One Pulse Mode.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_OPMode	specifies the OPM Mode to be used. This parameter can be one of the following values: • TIM_OPMode_Single • TIM_OPMode_Repetitive

Return values

None	

5.135.2.9 TIM_SetAutoreload()

```
void TIM_SetAutoreload (
            TIM_TypeDef * TIMx,
            uint32_t Autoreload )
```

Sets the TIMx Autoreload Register value.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
Autoreload	specifies the Autoreload register new value.

Return values

None	

5.135.2.10 TIM_SetClockDivision()

```
void TIM_SetClockDivision (
            TIM_TypeDef * TIMx,
            uint16_t TIM_CKD )
```

Sets the TIMx Clock Division value.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_CKD	specifies the clock division value. This parameter can be one of the following value: • TIM_CKD_DIV1: TDTS = Tck_tim • TIM_CKD_DIV2: TDTS = 2∗Tck_tim • TIM_CKD_DIV4: TDTS = 4∗Tck_tim

Return values

None	

5.135.2.11 TIM_SetCounter()

```
void TIM_SetCounter (
             TIM_TypeDef * TIMx,
             uint32_t Counter )
```

Sets the TIMx Counter Register value.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
Counter	specifies the Counter register new value.

Return values

None	

5.135.2.12 TIM_TimeBaseInit()

```
void TIM_TimeBaseInit (
             TIM_TypeDef * TIMx,
             TIM_TimeBaseInitTypeDef * TIM_TimeBaseInitStruct )
```

Initializes the TIMx Time Base Unit peripheral according to the specified parameters in the TIM_TimeBaseInitStruct.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_TimeBaseInitStruct	pointer to a TIM_TimeBaseInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.135.2.13 TIM_TimeBaseStructInit()

```
void TIM_TimeBaseStructInit (
             TIM_TimeBaseInitTypeDef * TIM_TimeBaseInitStruct )
```

Fills each TIM_TimeBaseInitStruct member with its default value.

Parameters

TIM_TimeBaseInitStruct	: pointer to a TIM_TimeBaseInitTypeDef structure which will be initialized.

Return values

None	

5.135.2.14 TIM_UpdateDisableConfig()

```
void TIM_UpdateDisableConfig (
            TIM_TypeDef * TIMx,
            FunctionalState NewState )
```

Enables or Disables the TIMx Update event.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
NewState	new state of the TIMx UDIS bit This parameter can be: ENABLE or DISABLE.

Return values

None	

5.135.2.15 TIM_UpdateRequestConfig()

```
void TIM_UpdateRequestConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_UpdateSource )
```

Configures the TIMx Update Request Interrupt source.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_UpdateSource	specifies the Update source. This parameter can be one of the following values: • TIM_UpdateSource_Global: Source of update is the counter overflow/underflow or the setting of UG bit, or an update generation through the slave mode controller. • TIM_UpdateSource_Regular: Source of update is counter overflow/underflow.

Return values

None	

5.136 Output Compare management functions

Output Compare management functions.

Functions

- void TIM_OC1Init (TIM_TypeDef ∗TIMx, TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Initializes the TIMx Channel1 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC2Init (TIM_TypeDef ∗TIMx, TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Initializes the TIMx Channel2 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC3Init (TIM_TypeDef ∗TIMx, TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Initializes the TIMx Channel3 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC4Init (TIM_TypeDef ∗TIMx, TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Initializes the TIMx Channel4 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OCStructInit (TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Fills each TIM_OCInitStruct member with its default value.
- void TIM_SelectOCxM (TIM_TypeDef ∗TIMx, uint16_t TIM_Channel, uint16_t TIM_OCMode)

  Selects the TIM Output Compare Mode.
- void TIM_SetCompare1 (TIM_TypeDef ∗TIMx, uint32_t Compare1)

  Sets the TIMx Capture Compare1 Register value.
- void TIM_SetCompare2 (TIM_TypeDef ∗TIMx, uint32_t Compare2)

  Sets the TIMx Capture Compare2 Register value.
- void TIM_SetCompare3 (TIM_TypeDef ∗TIMx, uint32_t Compare3)

  Sets the TIMx Capture Compare3 Register value.
- void TIM_SetCompare4 (TIM_TypeDef ∗TIMx, uint32_t Compare4)

  Sets the TIMx Capture Compare4 Register value.
- void TIM_ForcedOC1Config (TIM_TypeDef ∗TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 1 waveform to active or inactive level.
- void TIM_ForcedOC2Config (TIM_TypeDef ∗TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 2 waveform to active or inactive level.
- void TIM_ForcedOC3Config (TIM_TypeDef ∗TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 3 waveform to active or inactive level.
- void TIM_ForcedOC4Config (TIM_TypeDef ∗TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 4 waveform to active or inactive level.
- void TIM_OC1PreloadConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR1.
- void TIM_OC2PreloadConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR2.
- void TIM_OC3PreloadConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR3.
- void TIM_OC4PreloadConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR4.
- void TIM_OC1FastConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 1 Fast feature.
- void TIM_OC2FastConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 2 Fast feature.
- void TIM_OC3FastConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 3 Fast feature.
- void TIM_OC4FastConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_OCFast)

Configures the TIMx Output Compare 4 Fast feature.

- void TIM_ClearOC1Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF1 signal on an external event.
- void TIM_ClearOC2Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF2 signal on an external event.
- void TIM_ClearOC3Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF3 signal on an external event.
- void TIM_ClearOC4Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF4 signal on an external event.
- void TIM_OC1PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 1 polarity.
- void TIM_OC1NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 1N polarity.
- void TIM_OC2PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 2 polarity.
- void TIM_OC2NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 2N polarity.
- void TIM_OC3PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 3 polarity.
- void TIM_OC3NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 3N polarity.
- void TIM_OC4PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 4 polarity.
- void TIM_CCxCmd (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_CCx)

  Enables or disables the TIM Capture Compare Channel x.
- void TIM_CCxNCmd (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_CCxN)

  Enables or disables the TIM Capture Compare Channel xN.

5.136.1 Detailed Description

Output Compare management functions.

```
 ===============================================================================
                        Output Compare management functions
 ===============================================================================

       ===================================================================
              TIM Driver: how to use it in Output Compare Mode
       ===================================================================
       To use the Timer in Output Compare mode, the following steps are mandatory:

       1. Enable TIM clock using RCC_APBxPeriphClockCmd(RCC_APBxPeriph_TIMx, ENABLE) function

       2. Configure the TIM pins by configuring the corresponding GPIO pins

       2. Configure the Time base unit as described in the first part of this driver,
          if needed, else the Timer will run with the default configuration:
          - Autoreload value = 0xFFFF
          - Prescaler value = 0x0000
          - Counter mode = Up counting
          - Clock Division = TIM_CKD_DIV1

       3. Fill the TIM_OCInitStruct with the desired parameters including:
          - The TIM Output Compare mode: TIM_OCMode
          - TIM Output State: TIM_OutputState
          - TIM Pulse value: TIM_Pulse
          - TIM Output Compare Polarity : TIM_OCPolarity
```

```
4. Call TIM_OCxInit(TIMx, &TIM_OCInitStruct) to configure the desired channel with the
   corresponding configuration

5. Call the TIM_Cmd(ENABLE) function to enable the TIM counter.

Note1: All other functions can be used separately to modify, if needed,
       a specific feature of the Timer.

Note2: In case of PWM mode, this function is mandatory:
       TIM_OCxPreloadConfig(TIMx, TIM_OCPreload_ENABLE);

Note3: If the corresponding interrupt or DMA request are needed, the user should:
         1. Enable the NVIC (or the DMA) to use the TIM interrupts (or DMA requests).
         2. Enable the corresponding interrupt (or DMA request) using the function
            TIM_ITConfig(TIMx, TIM_IT_CCx) (or TIM_DMA_Cmd(TIMx, TIM_DMA_CCx))
```

5.136.2 Function Documentation

5.136.2.1 TIM_CCxCmd()

```
void TIM_CCxCmd (
             TIM_TypeDef * TIMx,
             uint16_t TIM_Channel,
             uint16_t TIM_CCx )
```

Enables or disables the TIM Capture Compare Channel x.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_Channel	specifies the TIM Channel This parameter can be one of the following values: • TIM_Channel_1: TIM Channel 1 • TIM_Channel_2: TIM Channel 2 • TIM_Channel_3: TIM Channel 3 • TIM_Channel_4: TIM Channel 4
TIM_CCx	specifies the TIM Channel CCxE bit new state. This parameter can be: TIM_CCx_Enable or TIM_CCx_Disable.

Return values

None	

5.136.2.2 TIM_CCxNCmd()

```
void TIM_CCxNCmd (
             TIM_TypeDef * TIMx,
```

```
            uint16_t TIM_Channel,
            uint16_t TIM_CCxN )
```

Enables or disables the TIM Capture Compare Channel xN.

Parameters

TIMx	where x can be 1 or 8 to select the TIM peripheral.
TIM_Channel	specifies the TIM Channel This parameter can be one of the following values: • TIM_Channel_1: TIM Channel 1 • TIM_Channel_2: TIM Channel 2 • TIM_Channel_3: TIM Channel 3
TIM_CCxN	specifies the TIM Channel CCxNE bit new state. This parameter can be: TIM_CCxN_Enable or TIM_CCxN_Disable.

Return values

None	

5.136.2.3 TIM_ClearOC1Ref()

```
void TIM_ClearOC1Ref (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCClear )
```

Clears or safeguards the OCREF1 signal on an external event.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_OCClear	new state of the Output Compare Clear Enable Bit. This parameter can be one of the following values: • TIM_OCClear_Enable: TIM Output clear enable • TIM_OCClear_Disable: TIM Output clear disable

Return values

None	

5.136.2.4 TIM_ClearOC2Ref()

```
void TIM_ClearOC2Ref (
```

```
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCClear )
```

Clears or safeguards the OCREF2 signal on an external event.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCClear	new state of the Output Compare Clear Enable Bit. This parameter can be one of the following values: • TIM_OCClear_Enable: TIM Output clear enable • TIM_OCClear_Disable: TIM Output clear disable

Return values

None	

5.136.2.5 TIM_ClearOC3Ref()

```
void TIM_ClearOC3Ref (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCClear )
```

Clears or safeguards the OCREF3 signal on an external event.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCClear	new state of the Output Compare Clear Enable Bit. This parameter can be one of the following values: • TIM_OCClear_Enable: TIM Output clear enable • TIM_OCClear_Disable: TIM Output clear disable

Return values

None	

5.136.2.6 TIM_ClearOC4Ref()

```
void TIM_ClearOC4Ref (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCClear )
```

Clears or safeguards the OCREF4 signal on an external event.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCClear	new state of the Output Compare Clear Enable Bit. This parameter can be one of the following values: • TIM_OCClear_Enable: TIM Output clear enable • TIM_OCClear_Disable: TIM Output clear disable

Return values

None	

5.136.2.7 TIM_ForcedOC1Config()

```
void TIM_ForcedOC1Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ForcedAction )
```

Forces the TIMx output 1 waveform to active or inactive level.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_ForcedAction	specifies the forced Action to be set to the output waveform. This parameter can be one of the following values: • TIM_ForcedAction_Active: Force active level on OC1REF • TIM_ForcedAction_InActive: Force inactive level on OC1REF.

Return values

None	

5.136.2.8 TIM_ForcedOC2Config()

```
void TIM_ForcedOC2Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ForcedAction )
```

Forces the TIMx output 2 waveform to active or inactive level.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_ForcedAction	specifies the forced Action to be set to the output waveform. This parameter can be one of the following values: • TIM_ForcedAction_Active: Force active level on OC2REF • TIM_ForcedAction_InActive: Force inactive level on OC2REF.

Return values

None	

5.136.2.9 TIM_ForcedOC3Config()

```
void TIM_ForcedOC3Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ForcedAction )
```

Forces the TIMx output 3 waveform to active or inactive level.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ForcedAction	specifies the forced Action to be set to the output waveform. This parameter can be one of the following values: • TIM_ForcedAction_Active: Force active level on OC3REF • TIM_ForcedAction_InActive: Force inactive level on OC3REF.

Return values

None	

5.136.2.10 TIM_ForcedOC4Config()

```
void TIM_ForcedOC4Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ForcedAction )
```

Forces the TIMx output 4 waveform to active or inactive level.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ForcedAction	specifies the forced Action to be set to the output waveform. This parameter can be one of the following values: • TIM_ForcedAction_Active: Force active level on OC4REF • TIM_ForcedAction_InActive: Force inactive level on OC4REF.

Return values

None	

5.136.2.11 TIM_OC1FastConfig()

```
void TIM_OC1FastConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCFast )
```

Configures the TIMx Output Compare 1 Fast feature.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_OCFast	new state of the Output Compare Fast Enable Bit. This parameter can be one of the following values: • TIM_OCFast_Enable: TIM output compare fast enable • TIM_OCFast_Disable: TIM output compare fast disable

Return values

None	

5.136.2.12 TIM_OC1Init()

```
void TIM_OC1Init (
            TIM_TypeDef * TIMx,
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Initializes the TIMx Channel1 according to the specified parameters in the TIM_OCInitStruct.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.136.2.13 TIM_OC1NPolarityConfig()

```
void TIM_OC1NPolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCNPolarity )
```

Configures the TIMx Channel 1N polarity.

Parameters

TIMx	where x can be 1 or 8 to select the TIM peripheral.
TIM_OCNPolarity	specifies the OC1N Polarity This parameter can be one of the following values: • TIM_OCNPolarity_High: Output Compare active high • TIM_OCNPolarity_Low: Output Compare active low

Return values

None	

5.136.2.14 TIM_OC1PolarityConfig()

```
void TIM_OC1PolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPolarity )
```

Configures the TIMx channel 1 polarity.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_OCPolarity	specifies the OC1 Polarity This parameter can be one of the following values: • TIM_OCPolarity_High: Output Compare active high • TIM_OCPolarity_Low: Output Compare active low

Return values

None	

5.136.2.15 TIM_OC1PreloadConfig()

```
void TIM_OC1PreloadConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPreload )
```

Enables or disables the TIMx peripheral Preload register on CCR1.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_OCPreload	new state of the TIMx peripheral Preload register This parameter can be one of the following values: • TIM_OCPreload_Enable • TIM_OCPreload_Disable

Return values

None	

5.136.2.16 TIM_OC2FastConfig()

```
void TIM_OC2FastConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCFast )
```

Configures the TIMx Output Compare 2 Fast feature.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCFast	new state of the Output Compare Fast Enable Bit. This parameter can be one of the following values: • TIM_OCFast_Enable: TIM output compare fast enable • TIM_OCFast_Disable: TIM output compare fast disable

Return values

None	

5.136.2.17 TIM_OC2Init()

```
void TIM_OC2Init (
            TIM_TypeDef * TIMx,
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Initializes the TIMx Channel2 according to the specified parameters in the TIM_OCInitStruct.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.136.2.18 TIM_OC2NPolarityConfig()

```
void TIM_OC2NPolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCNPolarity )
```

Configures the TIMx Channel 2N polarity.

Parameters

TIMx	where x can be 1 or 8 to select the TIM peripheral.
TIM_OCNPolarity	specifies the OC2N Polarity This parameter can be one of the following values: • TIM_OCNPolarity_High: Output Compare active high • TIM_OCNPolarity_Low: Output Compare active low

Return values

None	

5.136.2.19 TIM_OC2PolarityConfig()

```
void TIM_OC2PolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPolarity )
```

Configures the TIMx channel 2 polarity.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCPolarity	specifies the OC2 Polarity This parameter can be one of the following values: • TIM_OCPolarity_High: Output Compare active high • TIM_OCPolarity_Low: Output Compare active low

Return values

None	

5.136.2.20 TIM_OC2PreloadConfig()

```
void TIM_OC2PreloadConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPreload )
```

Enables or disables the TIMx peripheral Preload register on CCR2.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_OCPreload	new state of the TIMx peripheral Preload register This parameter can be one of the following values: • TIM_OCPreload_Enable • TIM_OCPreload_Disable

Return values

None	

5.136.2.21 TIM_OC3FastConfig()

```
void TIM_OC3FastConfig (
```

```
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCFast )
```

Configures the TIMx Output Compare 3 Fast feature.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCFast	new state of the Output Compare Fast Enable Bit. This parameter can be one of the following values: • TIM_OCFast_Enable: TIM output compare fast enable • TIM_OCFast_Disable: TIM output compare fast disable

Return values

None	

5.136.2.22 TIM_OC3Init()

```
void TIM_OC3Init (
            TIM_TypeDef * TIMx,
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Initializes the TIMx Channel3 according to the specified parameters in the TIM_OCInitStruct.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.136.2.23 TIM_OC3NPolarityConfig()

```
void TIM_OC3NPolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCNPolarity )
```

Configures the TIMx Channel 3N polarity.

Parameters

TIMx	where x can be 1 or 8 to select the TIM peripheral.
TIM_OCNPolarity	specifies the OC3N Polarity This parameter can be one of the following values: • TIM_OCNPolarity_High: Output Compare active high • TIM_OCNPolarity_Low: Output Compare active low

Return values

None	

5.136.2.24 TIM_OC3PolarityConfig()

```
void TIM_OC3PolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPolarity )
```

Configures the TIMx channel 3 polarity.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCPolarity	specifies the OC3 Polarity This parameter can be one of the following values: • TIM_OCPolarity_High: Output Compare active high • TIM_OCPolarity_Low: Output Compare active low

Return values

None	

5.136.2.25 TIM_OC3PreloadConfig()

```
void TIM_OC3PreloadConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPreload )
```

Enables or disables the TIMx peripheral Preload register on CCR3.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.

Parameters

TIM_OCPreload	new state of the TIMx peripheral Preload register This parameter can be one of the following values: • TIM_OCPreload_Enable • TIM_OCPreload_Disable

Return values

None	

5.136.2.26 TIM_OC4FastConfig()

```
void TIM_OC4FastConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCFast )
```

Configures the TIMx Output Compare 4 Fast feature.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCFast	new state of the Output Compare Fast Enable Bit. This parameter can be one of the following values: • TIM_OCFast_Enable: TIM output compare fast enable • TIM_OCFast_Disable: TIM output compare fast disable

Return values

None	

5.136.2.27 TIM_OC4Init()

```
void TIM_OC4Init (
            TIM_TypeDef * TIMx,
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Initializes the TIMx Channel4 according to the specified parameters in the TIM_OCInitStruct.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.136.2.28 TIM_OC4PolarityConfig()

```
void TIM_OC4PolarityConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPolarity )
```

Configures the TIMx channel 4 polarity.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCPolarity	specifies the OC4 Polarity This parameter can be one of the following values: • TIM_OCPolarity_High: Output Compare active high • TIM_OCPolarity_Low: Output Compare active low

Return values

None	

5.136.2.29 TIM_OC4PreloadConfig()

```
void TIM_OC4PreloadConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_OCPreload )
```

Enables or disables the TIMx peripheral Preload register on CCR4.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_OCPreload	new state of the TIMx peripheral Preload register This parameter can be one of the following values: • TIM_OCPreload_Enable • TIM_OCPreload_Disable

Return values

None	

5.136.2.30 TIM_OCStructInit()

```
void TIM_OCStructInit (
            TIM_OCInitTypeDef * TIM_OCInitStruct )
```

Fills each TIM_OCInitStruct member with its default value.

Parameters

TIM_OCInitStruct	pointer to a TIM_OCInitTypeDef structure which will be initialized.

Return values

None	

5.136.2.31 TIM_SelectOCxM()

```
void TIM_SelectOCxM (
            TIM_TypeDef * TIMx,
            uint16_t TIM_Channel,
            uint16_t TIM_OCMode )
```

Selects the TIM Output Compare Mode.

Note

This function disables the selected channel before changing the Output Compare Mode. If needed, user has to enable this channel using TIM_CCxCmd() and TIM_CCxNCmd() functions.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_Channel	specifies the TIM Channel This parameter can be one of the following values: • TIM_Channel_1: TIM Channel 1 • TIM_Channel_2: TIM Channel 2 • TIM_Channel_3: TIM Channel 3 • TIM_Channel_4: TIM Channel 4

Parameters

TIM_OCMode	specifies the TIM Output Compare Mode. This parameter can be one of the following values: • TIM_OCMode_Timing • TIM_OCMode_Active • TIM_OCMode_Toggle • TIM_OCMode_PWM1 • TIM_OCMode_PWM2 • TIM_ForcedAction_Active • TIM_ForcedAction_InActive

Return values

None	

5.136.2.32 TIM_SetCompare1()

```
void TIM_SetCompare1 (
             TIM_TypeDef * TIMx,
             uint32_t Compare1 )
```

Sets the TIMx Capture Compare1 Register value.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
Compare1	specifies the Capture Compare1 register new value.

Return values

None	

5.136.2.33 TIM_SetCompare2()

```
void TIM_SetCompare2 (
             TIM_TypeDef * TIMx,
             uint32_t Compare2 )
```

Sets the TIMx Capture Compare2 Register value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
Compare2	specifies the Capture Compare2 register new value.

Return values

None	

5.136.2.34 TIM_SetCompare3()

```
void TIM_SetCompare3 (
             TIM_TypeDef * TIMx,
             uint32_t Compare3 )
```

Sets the TIMx Capture Compare3 Register value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
Compare3	specifies the Capture Compare3 register new value.

Return values

None	

5.136.2.35 TIM_SetCompare4()

```
void TIM_SetCompare4 (
             TIM_TypeDef * TIMx,
             uint32_t Compare4 )
```

Sets the TIMx Capture Compare4 Register value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
Compare4	specifies the Capture Compare4 register new value.

Return values

None	

5.137 Input Capture management functions

Input Capture management functions.

Functions

- void TIM_ICInit (TIM_TypeDef ∗TIMx, TIM_ICInitTypeDef ∗TIM_ICInitStruct)

  Initializes the TIM peripheral according to the specified parameters in the TIM_ICInitStruct.
- void TIM_ICStructInit (TIM_ICInitTypeDef ∗TIM_ICInitStruct)

  Fills each TIM_ICInitStruct member with its default value.
- void TIM_PWMIConfig (TIM_TypeDef ∗TIMx, TIM_ICInitTypeDef ∗TIM_ICInitStruct)

  Configures the TIM peripheral according to the specified parameters in the TIM_ICInitStruct to measure an external PWM signal.
- uint32_t TIM_GetCapture1 (TIM_TypeDef ∗TIMx)

  Gets the TIMx Input Capture 1 value.
- uint32_t TIM_GetCapture2 (TIM_TypeDef ∗TIMx)

  Gets the TIMx Input Capture 2 value.
- uint32_t TIM_GetCapture3 (TIM_TypeDef ∗TIMx)

  Gets the TIMx Input Capture 3 value.
- uint32_t TIM_GetCapture4 (TIM_TypeDef ∗TIMx)

  Gets the TIMx Input Capture 4 value.
- void TIM_SetIC1Prescaler (TIM_TypeDef ∗TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 1 prescaler.
- void TIM_SetIC2Prescaler (TIM_TypeDef ∗TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 2 prescaler.
- void TIM_SetIC3Prescaler (TIM_TypeDef ∗TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 3 prescaler.
- void TIM_SetIC4Prescaler (TIM_TypeDef ∗TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 4 prescaler.

5.137.1 Detailed Description

Input Capture management functions.

```
 ===================================================================================
                      Input Capture management functions
 ===================================================================================

       ===================================================================
              TIM Driver: how to use it in Input Capture Mode
       ===================================================================
       To use the Timer in Input Capture mode, the following steps are mandatory:

       1. Enable TIM clock using RCC_APBxPeriphClockCmd(RCC_APBxPeriph_TIMx, ENABLE) function

       2. Configure the TIM pins by configuring the corresponding GPIO pins

       2. Configure the Time base unit as described in the first part of this driver,
          if needed, else the Timer will run with the default configuration:
          - Autoreload value = 0xFFFF
          - Prescaler value = 0x0000
          - Counter mode = Up counting
          - Clock Division = TIM_CKD_DIV1

       3. Fill the TIM_ICInitStruct with the desired parameters including:
```

```
   - TIM Channel: TIM_Channel
   - TIM Input Capture polarity: TIM_ICPolarity
   - TIM Input Capture selection: TIM_ICSelection
   - TIM Input Capture Prescaler: TIM_ICPrescaler
   - TIM Input CApture filter value: TIM_ICFilter

4. Call TIM_ICInit(TIMx, &TIM_ICInitStruct) to configure the desired channel with the
   corresponding configuration and to measure only frequency or duty cycle of the input signal,
   or,
   Call TIM_PWMIConfig(TIMx, &TIM_ICInitStruct) to configure the desired channels with the
   corresponding configuration and to measure the frequency and the duty cycle of the input signal

5. Enable the NVIC or the DMA to read the measured frequency.

6. Enable the corresponding interrupt (or DMA request) to read the Captured value,
   using the function TIM_ITConfig(TIMx, TIM_IT_CCx) (or TIM_DMA_Cmd(TIMx, TIM_DMA_CCx))

7. Call the TIM_Cmd(ENABLE) function to enable the TIM counter.

8. Use TIM_GetCapturex(TIMx); to read the captured value.

Note1: All other functions can be used separately to modify, if needed,
       a specific feature of the Timer.
```

5.137.2 Function Documentation

5.137.2.1 TIM_GetCapture1()

```
uint32_t TIM_GetCapture1 (
             TIM_TypeDef * TIMx )
```

Gets the TIMx Input Capture 1 value.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.

Return values

Capture	Compare 1 Register value.

5.137.2.2 TIM_GetCapture2()

```
uint32_t TIM_GetCapture2 (
             TIM_TypeDef * TIMx )
```

Gets the TIMx Input Capture 2 value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.

Return values

Capture	Compare 2 Register value.

5.137.2.3 TIM_GetCapture3()

```
uint32_t TIM_GetCapture3 (
            TIM_TypeDef * TIMx )
```

Gets the TIMx Input Capture 3 value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.

Return values

Capture	Compare 3 Register value.

5.137.2.4 TIM_GetCapture4()

```
uint32_t TIM_GetCapture4 (
            TIM_TypeDef * TIMx )
```

Gets the TIMx Input Capture 4 value.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.

Return values

Capture	Compare 4 Register value.

5.137.2.5 TIM_ICInit()

```
void TIM_ICInit (
            TIM_TypeDef * TIMx,
            TIM_ICInitTypeDef * TIM_ICInitStruct )
```

Initializes the TIM peripheral according to the specified parameters in the TIM_ICInitStruct.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_ICInitStruct	pointer to a TIM_ICInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.137.2.6 TIM_ICStructInit()

```
void TIM_ICStructInit (
             TIM_ICInitTypeDef * TIM_ICInitStruct )
```

Fills each TIM_ICInitStruct member with its default value.

Parameters

TIM_ICInitStruct	pointer to a TIM_ICInitTypeDef structure which will be initialized.

Return values

None	

5.137.2.7 TIM_PWMIConfig()

```
void TIM_PWMIConfig (
             TIM_TypeDef * TIMx,
             TIM_ICInitTypeDef * TIM_ICInitStruct )
```

Configures the TIM peripheral according to the specified parameters in the TIM_ICInitStruct to measure an external PWM signal.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5,8, 9 or 12 to select the TIM peripheral.
TIM_ICInitStruct	pointer to a TIM_ICInitTypeDef structure that contains the configuration information for the specified TIM peripheral.

Return values

None	

5.137.2.8 TIM_SetIC1Prescaler()

```
void TIM_SetIC1Prescaler (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ICPSC )
```

Sets the TIMx Input Capture 1 prescaler.

Parameters

TIMx	where x can be 1 to 14 except 6 and 7, to select the TIM peripheral.
TIM_ICPSC	specifies the Input Capture1 prescaler new value. This parameter can be one of the following values: • TIM_ICPSC_DIV1: no prescaler • TIM_ICPSC_DIV2: capture is done once every 2 events • TIM_ICPSC_DIV4: capture is done once every 4 events • TIM_ICPSC_DIV8: capture is done once every 8 events

Return values

None	

5.137.2.9 TIM_SetIC2Prescaler()

```
void TIM_SetIC2Prescaler (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ICPSC )
```

Sets the TIMx Input Capture 2 prescaler.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_ICPSC	specifies the Input Capture2 prescaler new value. This parameter can be one of the following values: • TIM_ICPSC_DIV1: no prescaler • TIM_ICPSC_DIV2: capture is done once every 2 events • TIM_ICPSC_DIV4: capture is done once every 4 events • TIM_ICPSC_DIV8: capture is done once every 8 events

Return values

None	

5.137.2.10 TIM_SetIC3Prescaler()

```
void TIM_SetIC3Prescaler (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ICPSC )
```

Sets the TIMx Input Capture 3 prescaler.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ICPSC	specifies the Input Capture3 prescaler new value. This parameter can be one of the following values: • TIM_ICPSC_DIV1: no prescaler • TIM_ICPSC_DIV2: capture is done once every 2 events • TIM_ICPSC_DIV4: capture is done once every 4 events • TIM_ICPSC_DIV8: capture is done once every 8 events

Return values

None	

5.137.2.11 TIM_SetIC4Prescaler()

```
void TIM_SetIC4Prescaler (
            TIM_TypeDef * TIMx,
            uint16_t TIM_ICPSC )
```

Sets the TIMx Input Capture 4 prescaler.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ICPSC	specifies the Input Capture4 prescaler new value. This parameter can be one of the following values: • TIM_ICPSC_DIV1: no prescaler • TIM_ICPSC_DIV2: capture is done once every 2 events • TIM_ICPSC_DIV4: capture is done once every 4 events
	• TIM_ICPSC_DIV8: capture is done once every 8 events

Return values

None	

5.138 Advanced-control timers (TIM1 and TIM8) specific features

Advanced-control timers (TIM1 and TIM8) specific features.

Functions

- void TIM_BDTRConfig (TIM_TypeDef ∗TIMx, TIM_BDTRInitTypeDef ∗TIM_BDTRInitStruct)

  Configures the Break feature, dead time, Lock level, OSSI/OSSR State and the AOE(automatic output enable).
- void TIM_BDTRStructInit (TIM_BDTRInitTypeDef ∗TIM_BDTRInitStruct)

  Fills each TIM_BDTRInitStruct member with its default value.
- void TIM_CtrlPWMOutputs (TIM_TypeDef ∗TIMx, FunctionalState NewState)

  Enables or disables the TIM peripheral Main Outputs.
- void TIM_SelectCOM (TIM_TypeDef ∗TIMx, FunctionalState NewState)

  Selects the TIM peripheral Commutation event.
- void TIM_CCPreloadControl (TIM_TypeDef ∗TIMx, FunctionalState NewState)

  Sets or Resets the TIM peripheral Capture Compare Preload Control bit.

5.138.1 Detailed Description

Advanced-control timers (TIM1 and TIM8) specific features.

```
 ===================================================================================
           Advanced-control timers (TIM1 and TIM8) specific features
 ===================================================================================

        ===================================================================
               TIM Driver: how to use the Break feature
        ===================================================================
        After configuring the Timer channel(s) in the appropriate Output Compare mode:

        1. Fill the TIM_BDTRInitStruct with the desired parameters for the Timer
           Break Polarity, dead time, Lock level, the OSSI/OSSR State and the
           AOE(automatic output enable).

        2. Call TIM_BDTRConfig(TIMx, &TIM_BDTRInitStruct) to configure the Timer

        3. Enable the Main Output using TIM_CtrlPWMOutputs(TIM1, ENABLE)

        4. Once the break even occurs, the Timer's output signals are put in reset
           state or in a known state (according to the configuration made in
           TIM_BDTRConfig() function).
```

5.138.2 Function Documentation

5.138.2.1 TIM_BDTRConfig()

```
void TIM_BDTRConfig (
            TIM_TypeDef * TIMx,
            TIM_BDTRInitTypeDef * TIM_BDTRInitStruct )
```

Configures the Break feature, dead time, Lock level, OSSI/OSSR State and the AOE(automatic output enable).

Parameters

TIMx	where x can be 1 or 8 to select the TIM
TIM_BDTRInitStruct	pointer to a TIM_BDTRInitTypeDef structure that contains the BDTR Register configuration information for the TIM peripheral.

Return values

None	

5.138.2.2 TIM_BDTRStructInit()

```
void TIM_BDTRStructInit (
             TIM_BDTRInitTypeDef * TIM_BDTRInitStruct )
```

Fills each TIM_BDTRInitStruct member with its default value.

Parameters

TIM_BDTRInitStruct	pointer to a TIM_BDTRInitTypeDef structure which will be initialized.

Return values

None	

5.138.2.3 TIM_CCPreloadControl()

```
void TIM_CCPreloadControl (
             TIM_TypeDef * TIMx,
             FunctionalState NewState )
```

Sets or Resets the TIM peripheral Capture Compare Preload Control bit.

Parameters

TIMx	where x can be 1 or 8 to select the TIMx peripheral
NewState	new state of the Capture Compare Preload Control bit This parameter can be: ENABLE or DISABLE.

Return values

None	

5.138.2.4 TIM_CtrlPWMOutputs()

```
void TIM_CtrlPWMOutputs (
             TIM_TypeDef * TIMx,
             FunctionalState NewState )
```

Enables or disables the TIM peripheral Main Outputs.

Parameters

TIMx	where x can be 1 or 8 to select the TIMx peripheral.
NewState	new state of the TIM peripheral Main Outputs. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.138.2.5 TIM_SelectCOM()

```
void TIM_SelectCOM (
             TIM_TypeDef * TIMx,
             FunctionalState NewState )
```

Selects the TIM peripheral Commutation event.

Parameters

TIMx	where x can be 1 or 8 to select the TIMx peripheral
NewState	new state of the Commutation event. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.139 Interrupts DMA and flags management functions

Interrupts, DMA and flags management functions.

Functions

- void TIM_ITConfig (TIM_TypeDef *TIMx, uint16_t TIM_IT, FunctionalState NewState)

  Enables or disables the specified TIM interrupts.
- void TIM_GenerateEvent (TIM_TypeDef *TIMx, uint16_t TIM_EventSource)

  Configures the TIMx event to be generate by software.

- FlagStatus TIM_GetFlagStatus (TIM_TypeDef ∗TIMx, uint16_t TIM_FLAG)

  Checks whether the specified TIM flag is set or not.
- void TIM_ClearFlag (TIM_TypeDef ∗TIMx, uint16_t TIM_FLAG)

  Clears the TIMx's pending flags.
- ITStatus TIM_GetITStatus (TIM_TypeDef ∗TIMx, uint16_t TIM_IT)

  Checks whether the TIM interrupt has occurred or not.
- void TIM_ClearITPendingBit (TIM_TypeDef ∗TIMx, uint16_t TIM_IT)

  Clears the TIMx's interrupt pending bits.
- void TIM_DMAConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_DMABase, uint16_t TIM_DMABurstLength)

  Configures the TIMx's DMA interface.
- void TIM_DMACmd (TIM_TypeDef ∗TIMx, uint16_t TIM_DMASource, FunctionalState NewState)

  Enables or disables the TIMx's DMA Requests.
- void TIM_SelectCCDMA (TIM_TypeDef ∗TIMx, FunctionalState NewState)

  Selects the TIMx peripheral Capture Compare DMA source.

5.139.1 Detailed Description

Interrupts, DMA and flags management functions.

```
 ===============================================================================
                 Interrupts, DMA and flags management functions
 ===============================================================================
```

5.139.2 Function Documentation

5.139.2.1 TIM_ClearFlag()

```
void TIM_ClearFlag (
             TIM_TypeDef * TIMx,
             uint16_t TIM_FLAG )
```

Clears the TIMx's pending flags.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Parameters

TIM_FLAG	specifies the flag bit to clear. This parameter can be any combination of the following values: • TIM_FLAG_Update: TIM update Flag • TIM_FLAG_CC1: TIM Capture Compare 1 Flag • TIM_FLAG_CC2: TIM Capture Compare 2 Flag • TIM_FLAG_CC3: TIM Capture Compare 3 Flag • TIM_FLAG_CC4: TIM Capture Compare 4 Flag • TIM_FLAG_COM: TIM Commutation Flag • TIM_FLAG_Trigger: TIM Trigger Flag • TIM_FLAG_Break: TIM Break Flag • TIM_FLAG_CC1OF: TIM Capture Compare 1 over capture Flag • TIM_FLAG_CC2OF: TIM Capture Compare 2 over capture Flag • TIM_FLAG_CC3OF: TIM Capture Compare 3 over capture Flag • TIM_FLAG_CC4OF: TIM Capture Compare 4 over capture Flag

Note

TIM6 and TIM7 can have only one update flag.

TIM_FLAG_COM and TIM_FLAG_Break are used only with TIM1 and TIM8.

Return values

None	

5.139.2.2 TIM_ClearITPendingBit()

```
void TIM_ClearITPendingBit (
             TIM_TypeDef * TIMx,
             uint16_t TIM_IT )
```

Clears the TIMx's interrupt pending bits.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Parameters

TIM_IT	specifies the pending bit to clear. This parameter can be any combination of the following values: • TIM_IT_Update: TIM1 update Interrupt source • TIM_IT_CC1: TIM Capture Compare 1 Interrupt source • TIM_IT_CC2: TIM Capture Compare 2 Interrupt source • TIM_IT_CC3: TIM Capture Compare 3 Interrupt source • TIM_IT_CC4: TIM Capture Compare 4 Interrupt source • TIM_IT_COM: TIM Commutation Interrupt source • TIM_IT_Trigger: TIM Trigger Interrupt source • TIM_IT_Break: TIM Break Interrupt source

Note

TIM6 and TIM7 can generate only an update interrupt.

TIM_IT_COM and TIM_IT_Break are used only with TIM1 and TIM8.

Return values

None	

5.139.2.3 TIM_DMACmd()

```
void TIM_DMACmd (
              TIM_TypeDef * TIMx,
              uint16_t TIM_DMASource,
              FunctionalState NewState )
```

Enables or disables the TIMx's DMA Requests.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 6, 7 or 8 to select the TIM peripheral.
TIM_DMASource	specifies the DMA Request sources. This parameter can be any combination of the following values: • TIM_DMA_Update: TIM update Interrupt source • TIM_DMA_CC1: TIM Capture Compare 1 DMA source • TIM_DMA_CC2: TIM Capture Compare 2 DMA source • TIM_DMA_CC3: TIM Capture Compare 3 DMA source • TIM_DMA_CC4: TIM Capture Compare 4 DMA source • TIM_DMA_COM: TIM Commutation DMA source • TIM_DMA_Trigger: TIM Trigger DMA source

Parameters

NewState	new state of the DMA Request sources. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.139.2.4 TIM_DMAConfig()

```
void TIM_DMAConfig (
             TIM_TypeDef * TIMx,
             uint16_t TIM_DMABase,
             uint16_t TIM_DMABurstLength )
```

Configures the TIMx's DMA interface.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.

Parameters

TIM_DMABase	DMA Base address. This parameter can be one of the following values: • TIM_DMABase_CR1 • TIM_DMABase_CR2 • TIM_DMABase_SMCR • TIM_DMABase_DIER • TIM1_DMABase_SR • TIM_DMABase_EGR • TIM_DMABase_CCMR1 • TIM_DMABase_CCMR2 • TIM_DMABase_CCER • TIM_DMABase_CNT • TIM_DMABase_PSC • TIM_DMABase_ARR • TIM_DMABase_RCR • TIM_DMABase_CCR1 • TIM_DMABase_CCR2 • TIM_DMABase_CCR3 • TIM_DMABase_CCR4 • TIM_DMABase_BDTR • TIM_DMABase_DCR
TIM_DMABurstLength	DMA Burst length. This parameter can be one value between: TIM_DMABurstLength_1Transfer and TIM_DMABurstLength_18Transfers.

Return values

None	

5.139.2.5 TIM_GenerateEvent()

```
void TIM_GenerateEvent (
            TIM_TypeDef * TIMx,
            uint16_t TIM_EventSource )
```

Configures the TIMx event to be generate by software.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.
TIM_EventSource	specifies the event source. This parameter can be one or more of the following values: • TIM_EventSource_Update: Timer update Event source • TIM_EventSource_CC1: Timer Capture Compare 1 Event source • TIM_EventSource_CC2: Timer Capture Compare 2 Event source • TIM_EventSource_CC3: Timer Capture Compare 3 Event source • TIM_EventSource_CC4: Timer Capture Compare 4 Event source • TIM_EventSource_COM: Timer COM event source • TIM_EventSource_Trigger: Timer Trigger Event source • TIM_EventSource_Break: Timer Break event source

Note

TIM6 and TIM7 can only generate an update event.

TIM_EventSource_COM and TIM_EventSource_Break are used only with TIM1 and TIM8.

Return values

None	

5.139.2.6 TIM_GetFlagStatus()

```
FlagStatus TIM_GetFlagStatus (
             TIM_TypeDef * TIMx,
             uint16_t TIM_FLAG )
```

Checks whether the specified TIM flag is set or not.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Parameters

TIM_FLAG	specifies the flag to check. This parameter can be one of the following values: • TIM_FLAG_Update: TIM update Flag • TIM_FLAG_CC1: TIM Capture Compare 1 Flag • TIM_FLAG_CC2: TIM Capture Compare 2 Flag • TIM_FLAG_CC3: TIM Capture Compare 3 Flag • TIM_FLAG_CC4: TIM Capture Compare 4 Flag • TIM_FLAG_COM: TIM Commutation Flag • TIM_FLAG_Trigger: TIM Trigger Flag • TIM_FLAG_Break: TIM Break Flag • TIM_FLAG_CC1OF: TIM Capture Compare 1 over capture Flag • TIM_FLAG_CC2OF: TIM Capture Compare 2 over capture Flag • TIM_FLAG_CC3OF: TIM Capture Compare 3 over capture Flag • TIM_FLAG_CC4OF: TIM Capture Compare 4 over capture Flag

Note

TIM6 and TIM7 can have only one update flag.

TIM_FLAG_COM and TIM_FLAG_Break are used only with TIM1 and TIM8.

Return values

The	new state of TIM_FLAG (SET or RESET).

5.139.2.7 TIM_GetITStatus()

```
ITStatus TIM_GetITStatus (
            TIM_TypeDef * TIMx,
            uint16_t TIM_IT )
```

Checks whether the TIM interrupt has occurred or not.

Parameters

TIMx	where x can be 1 to 14 to select the TIM peripheral.

Parameters

TIM_IT	specifies the TIM interrupt source to check. This parameter can be one of the following values: • TIM_IT_Update: TIM update Interrupt source • TIM_IT_CC1: TIM Capture Compare 1 Interrupt source • TIM_IT_CC2: TIM Capture Compare 2 Interrupt source • TIM_IT_CC3: TIM Capture Compare 3 Interrupt source • TIM_IT_CC4: TIM Capture Compare 4 Interrupt source • TIM_IT_COM: TIM Commutation Interrupt source • TIM_IT_Trigger: TIM Trigger Interrupt source • TIM_IT_Break: TIM Break Interrupt source

Note

TIM6 and TIM7 can generate only an update interrupt.

TIM_IT_COM and TIM_IT_Break are used only with TIM1 and TIM8.

Return values

The	new state of the TIM_IT(SET or RESET).

5.139.2.8 TIM_ITConfig()

```
void TIM_ITConfig (
              TIM_TypeDef * TIMx,
              uint16_t TIM_IT,
              FunctionalState NewState )
```

Enables or disables the specified TIM interrupts.

Parameters

TIMx	where x can be 1 to 14 to select the TIMx peripheral.

Parameters

TIM_IT	specifies the TIM interrupts sources to be enabled or disabled. This parameter can be any combination of the following values: • TIM_IT_Update: TIM update Interrupt source • TIM_IT_CC1: TIM Capture Compare 1 Interrupt source • TIM_IT_CC2: TIM Capture Compare 2 Interrupt source • TIM_IT_CC3: TIM Capture Compare 3 Interrupt source • TIM_IT_CC4: TIM Capture Compare 4 Interrupt source • TIM_IT_COM: TIM Commutation Interrupt source • TIM_IT_Trigger: TIM Trigger Interrupt source • TIM_IT_Break: TIM Break Interrupt source

Note

For TIM6 and TIM7 only the parameter TIM_IT_Update can be used

For TIM9 and TIM12 only one of the following parameters can be used: TIM_IT_Update, TIM_IT_CC1, TIM_IT_CC2 or TIM_IT_Trigger.

For TIM10, TIM11, TIM13 and TIM14 only one of the following parameters can be used: TIM_IT_Update or TIM_IT_CC1

TIM_IT_COM and TIM_IT_Break can be used only with TIM1 and TIM8

Parameters

NewState	new state of the TIM interrupts. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.139.2.9 TIM_SelectCCDMA()

```
void TIM_SelectCCDMA (
            TIM_TypeDef * TIMx,
            FunctionalState NewState )
```

Selects the TIMx peripheral Capture Compare DMA source.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
NewState	new state of the Capture Compare DMA source This parameter can be: ENABLE or DISABLE.

Return values

None	

5.140 Clocks management functions

Clocks management functions.

Functions

- void TIM_InternalClockConfig (TIM_TypeDef *TIMx)

  Configures the TIMx internal Clock.
- void TIM_ITRxExternalClockConfig (TIM_TypeDef *TIMx, uint16_t TIM_InputTriggerSource)

  Configures the TIMx Internal Trigger as External Clock.
- void TIM_TIxExternalClockConfig (TIM_TypeDef *TIMx, uint16_t TIM_TIxExternalCLKSource, uint16_t TIM_ICPolarity, uint16_t ICFilter)

  Configures the TIMx Trigger as External Clock.
- void TIM_ETRClockMode1Config (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the External clock Mode1.
- void TIM_ETRClockMode2Config (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the External clock Mode2.

5.140.1 Detailed Description

Clocks management functions.

```
 ==============================================================================
                        Clocks management functions
 ==============================================================================
```

5.140.2 Function Documentation

5.140.2.1 TIM_ETRClockMode1Config()

```
void TIM_ETRClockMode1Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ExtTRGPrescaler,
             uint16_t TIM_ExtTRGPolarity,
             uint16_t ExtTRGFilter )
```

Configures the External clock Mode1.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ExtTRGPrescaler	The external Trigger Prescaler. This parameter can be one of the following values: • TIM_ExtTRGPSC_OFF: ETRP Prescaler OFF. • TIM_ExtTRGPSC_DIV2: ETRP frequency divided by 2. • TIM_ExtTRGPSC_DIV4: ETRP frequency divided by 4. • TIM_ExtTRGPSC_DIV8: ETRP frequency divided by 8.
TIM_ExtTRGPolarity	The external Trigger Polarity. This parameter can be one of the following values: • TIM_ExtTRGPolarity_Inverted: active low or falling edge active. • TIM_ExtTRGPolarity_NonInverted: active high or rising edge active.
ExtTRGFilter	External Trigger Filter. This parameter must be a value between 0x00 and 0x0F

Return values

None	

5.140.2.2 TIM_ETRClockMode2Config()

```
void TIM_ETRClockMode2Config (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ExtTRGPrescaler,
             uint16_t TIM_ExtTRGPolarity,
             uint16_t ExtTRGFilter )
```

Configures the External clock Mode2.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ExtTRGPrescaler	The external Trigger Prescaler. This parameter can be one of the following values: • TIM_ExtTRGPSC_OFF: ETRP Prescaler OFF. • TIM_ExtTRGPSC_DIV2: ETRP frequency divided by 2. • TIM_ExtTRGPSC_DIV4: ETRP frequency divided by 4. • TIM_ExtTRGPSC_DIV8: ETRP frequency divided by 8.
TIM_ExtTRGPolarity	The external Trigger Polarity. This parameter can be one of the following values: • TIM_ExtTRGPolarity_Inverted: active low or falling edge active. • TIM_ExtTRGPolarity_NonInverted: active high or rising edge active.
ExtTRGFilter	External Trigger Filter. This parameter must be a value between 0x00 and 0x0F

Return values

None	

5.140.2.3 TIM_InternalClockConfig()

```
void TIM_InternalClockConfig (
            TIM_TypeDef * TIMx )
```

Configures the TIMx internal Clock.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.

Return values

None	

5.140.2.4 TIM_ITRxExternalClockConfig()

```
void TIM_ITRxExternalClockConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_InputTriggerSource )
```

Configures the TIMx Internal Trigger as External Clock.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_InputTriggerSource	Trigger source. This parameter can be one of the following values: • TIM_TS_ITR0: Internal Trigger 0 • TIM_TS_ITR1: Internal Trigger 1 • TIM_TS_ITR2: Internal Trigger 2 • TIM_TS_ITR3: Internal Trigger 3

Return values

None	

5.140.2.5 TIM_TIxExternalClockConfig()

```
void TIM_TIxExternalClockConfig (
            TIM_TypeDef * TIMx,
            uint16_t TIM_TIxExternalCLKSource,
            uint16_t TIM_ICPolarity,
            uint16_t ICFilter )
```

Configures the TIMx Trigger as External Clock.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9, 10, 11, 12, 13 or 14 to select the TIM peripheral.
TIM_TIxExternalCLKSource	Trigger source. This parameter can be one of the following values: • TIM_TIxExternalCLK1Source_TI1ED: TI1 Edge Detector • TIM_TIxExternalCLK1Source_TI1: Filtered Timer Input 1 • TIM_TIxExternalCLK1Source_TI2: Filtered Timer Input 2
TIM_ICPolarity	specifies the TIx Polarity. This parameter can be one of the following values: • TIM_ICPolarity_Rising • TIM_ICPolarity_Falling
ICFilter	specifies the filter value. This parameter must be a value between 0x0 and 0xF.

Return values

None	

5.141 Synchronization management functions

Synchronization management functions.

Functions

- void TIM_SelectInputTrigger (TIM_TypeDef ∗TIMx, uint16_t TIM_InputTriggerSource)

  Selects the Input Trigger source.
- void TIM_SelectOutputTrigger (TIM_TypeDef ∗TIMx, uint16_t TIM_TRGOSource)

  Selects the TIMx Trigger Output Mode.
- void TIM_SelectSlaveMode (TIM_TypeDef ∗TIMx, uint16_t TIM_SlaveMode)

  Selects the TIMx Slave Mode.
- void TIM_SelectMasterSlaveMode (TIM_TypeDef ∗TIMx, uint16_t TIM_MasterSlaveMode)

  Sets or Resets the TIMx Master/Slave Mode.
- void TIM_ETRConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the TIMx External Trigger (ETR).

5.141.1 Detailed Description

Synchronization management functions.

```
 ===================================================================================
                        Synchronization management functions
 ===================================================================================

       ===================================================================
              TIM Driver: how to use it in synchronization Mode
       ===================================================================
       Case of two/several Timers
       **************************
       1. Configure the Master Timers using the following functions:
          - void TIM_SelectOutputTrigger(TIM_TypeDef* TIMx, uint16_t TIM_TRGOSource);
          - void TIM_SelectMasterSlaveMode(TIM_TypeDef* TIMx, uint16_t TIM_MasterSlaveMode);
       2. Configure the Slave Timers using the following functions:
          - void TIM_SelectInputTrigger(TIM_TypeDef* TIMx, uint16_t TIM_InputTriggerSource);
          - void TIM_SelectSlaveMode(TIM_TypeDef* TIMx, uint16_t TIM_SlaveMode);

       Case of Timers and external trigger(ETR pin)
       ********************************************
       1. Configure the External trigger using this function:
          - void TIM_ETRConfig(TIM_TypeDef* TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity,
                               uint16_t ExtTRGFilter);
       2. Configure the Slave Timers using the following functions:
          - void TIM_SelectInputTrigger(TIM_TypeDef* TIMx, uint16_t TIM_InputTriggerSource);
          - void TIM_SelectSlaveMode(TIM_TypeDef* TIMx, uint16_t TIM_SlaveMode);
```

5.141.2 Function Documentation

5.141.2.1 TIM_ETRConfig()

```
void TIM_ETRConfig (
             TIM_TypeDef * TIMx,
             uint16_t TIM_ExtTRGPrescaler,
             uint16_t TIM_ExtTRGPolarity,
             uint16_t ExtTRGFilter )
```

Configures the TIMx External Trigger (ETR).

Parameters

TIMx	where x can be 1, 2, 3, 4, 5 or 8 to select the TIM peripheral.
TIM_ExtTRGPrescaler	The external Trigger Prescaler. This parameter can be one of the following values: • TIM_ExtTRGPSC_OFF: ETRP Prescaler OFF. • TIM_ExtTRGPSC_DIV2: ETRP frequency divided by 2. • TIM_ExtTRGPSC_DIV4: ETRP frequency divided by 4. • TIM_ExtTRGPSC_DIV8: ETRP frequency divided by 8.
TIM_ExtTRGPolarity	The external Trigger Polarity. This parameter can be one of the following values: • TIM_ExtTRGPolarity_Inverted: active low or falling edge active. • TIM_ExtTRGPolarity_NonInverted: active high or rising edge active.
ExtTRGFilter	External Trigger Filter. This parameter must be a value between 0x00 and 0x0F

Return values

None	

5.141.2.2 TIM_SelectInputTrigger()

```
void TIM_SelectInputTrigger (
            TIM_TypeDef * TIMx,
            uint16_t TIM_InputTriggerSource )
```

Selects the Input Trigger source.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9, 10, 11, 12, 13 or 14 to select the TIM peripheral.
TIM_InputTriggerSource	The Input Trigger source. This parameter can be one of the following values: • TIM_TS_ITR0: Internal Trigger 0 • TIM_TS_ITR1: Internal Trigger 1 • TIM_TS_ITR2: Internal Trigger 2 • TIM_TS_ITR3: Internal Trigger 3 • TIM_TS_TI1F_ED: TI1 Edge Detector • TIM_TS_TI1FP1: Filtered Timer Input 1 • TIM_TS_TI2FP2: Filtered Timer Input 2 • TIM_TS_ETRF: External Trigger input

Return values

None	

5.141.2.3 TIM_SelectMasterSlaveMode()

```
void TIM_SelectMasterSlaveMode (
            TIM_TypeDef * TIMx,
            uint16_t TIM_MasterSlaveMode )
```

Sets or Resets the TIMx Master/Slave Mode.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.

Parameters

TIM_MasterSlaveMode	specifies the Timer Master Slave Mode. This parameter can be one of the following values: • TIM_MasterSlaveMode_Enable: synchronization between the current timer and its slaves (through TRGO) • TIM_MasterSlaveMode_Disable: No action

Return values

None	

5.141.2.4 TIM_SelectOutputTrigger()

```
void TIM_SelectOutputTrigger (
             TIM_TypeDef * TIMx,
             uint16_t TIM_TRGOSource )
```

Selects the TIMx Trigger Output Mode.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 6, 7 or 8 to select the TIM peripheral.
TIM_TRGOSource	specifies the Trigger Output source. This parameter can be one of the following values:

- For all TIMx
  - TIM_TRGOSource_Reset: The UG bit in the TIM_EGR register is used as the trigger output(TRGO)
  - TIM_TRGOSource_Enable: The Counter Enable CEN is used as the trigger output(TRGO)
  - TIM_TRGOSource_Update: The update event is selected as the trigger output(TRGO)
- For all TIMx except TIM6 and TIM7
  - TIM_TRGOSource_OC1: The trigger output sends a positive pulse when the CC1IF flag is to be set, as soon as a capture or compare match occurs(TRGO)
  - TIM_TRGOSource_OC1Ref: OC1REF signal is used as the trigger output(TRGO)
  - TIM_TRGOSource_OC2Ref: OC2REF signal is used as the trigger output(TRGO)
  - TIM_TRGOSource_OC3Ref: OC3REF signal is used as the trigger output(TRGO)
  - TIM_TRGOSource_OC4Ref: OC4REF signal is used as the trigger output(TRGO)

Return values

None	

5.141.2.5 TIM_SelectSlaveMode()

```
void TIM_SelectSlaveMode (
             TIM_TypeDef * TIMx,
             uint16_t TIM_SlaveMode )
```

Selects the TIMx Slave Mode.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_SlaveMode	specifies the Timer Slave Mode. This parameter can be one of the following values: • TIM_SlaveMode_Reset: Rising edge of the selected trigger signal(TRGI) reinitialize the counter and triggers an update of the registers • TIM_SlaveMode_Gated: The counter clock is enabled when the trigger signal (TRGI) is high • TIM_SlaveMode_Trigger: The counter starts at a rising edge of the trigger TRGI • TIM_SlaveMode_External1: Rising edges of the selected trigger (TRGI) clock the counter

Return values

None	

5.142 Specific interface management functions

Specific interface management functions.

Functions

- void TIM_EncoderInterfaceConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_EncoderMode, uint16_t TIM_IC1↩ Polarity, uint16_t TIM_IC2Polarity)

  Configures the TIMx Encoder Interface.
- void TIM_SelectHallSensor (TIM_TypeDef ∗TIMx, FunctionalState NewState)

  Enables or disables the TIMx's Hall sensor interface.

5.142.1 Detailed Description

Specific interface management functions.

```
 ============================================================================
                    Specific interface management functions
 ============================================================================
```

5.142.2 Function Documentation

5.142.2.1 TIM_EncoderInterfaceConfig()

```
void TIM_EncoderInterfaceConfig (
             TIM_TypeDef * TIMx,
             uint16_t TIM_EncoderMode,
             uint16_t TIM_IC1Polarity,
             uint16_t TIM_IC2Polarity )
```

Configures the TIMx Encoder Interface.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
TIM_EncoderMode	specifies the TIMx Encoder Mode. This parameter can be one of the following values: • TIM_EncoderMode_TI1: Counter counts on TI1FP1 edge depending on TI2FP2 level. • TIM_EncoderMode_TI2: Counter counts on TI2FP2 edge depending on TI1FP1 level. • TIM_EncoderMode_TI12: Counter counts on both TI1FP1 and TI2FP2 edges depending on the level of the other input.
TIM_IC1Polarity	specifies the IC1 Polarity This parameter can be one of the following values: • TIM_ICPolarity_Falling: IC Falling edge. • TIM_ICPolarity_Rising: IC Rising edge.
TIM_IC2Polarity	specifies the IC2 Polarity This parameter can be one of the following values: • TIM_ICPolarity_Falling: IC Falling edge. • TIM_ICPolarity_Rising: IC Rising edge.

Return values

None	

5.142.2.2 TIM_SelectHallSensor()

```
void TIM_SelectHallSensor (
             TIM_TypeDef * TIMx,
             FunctionalState NewState )
```

Enables or disables the TIMx's Hall sensor interface.

Parameters

TIMx	where x can be 1, 2, 3, 4, 5, 8, 9 or 12 to select the TIM peripheral.
NewState	new state of the TIMx Hall sensor interface. This parameter can be: ENABLE or DISABLE.

Return values

None	

5.143 Specific remapping management function

Specific remapping management function.

Functions

- void TIM_RemapConfig (TIM_TypeDef *TIMx, uint16_t TIM_Remap)
  Configures the TIM2, TIM5 and TIM11 Remapping input capabilities.

5.143.1 Detailed Description

Specific remapping management function.

```
 ==============================================================================
                     Specific remapping management function
 ==============================================================================
```

5.143.2 Function Documentation

5.143.2.1 TIM_RemapConfig()

```
void TIM_RemapConfig (
             TIM_TypeDef * TIMx,
             uint16_t TIM_Remap )
```

Configures the TIM2, TIM5 and TIM11 Remapping input capabilities.

Parameters

TIMx	where x can be 2, 5 or 11 to select the TIM peripheral.

Parameters

TIM_Remap	specifies the TIM input remapping source. This parameter can be one of the following values: • TIM2_TIM8_TRGO: TIM2 ITR1 input is connected to TIM8 Trigger output(default) • TIM2_ETH_PTP: TIM2 ITR1 input is connected to ETH PTP trogger output. • TIM2_USBFS_SOF: TIM2 ITR1 input is connected to USB FS SOF. • TIM2_USBHS_SOF: TIM2 ITR1 input is connected to USB HS SOF. • TIM5_GPIO: TIM5 CH4 input is connected to dedicated Timer pin(default) • TIM5_LSI: TIM5 CH4 input is connected to LSI clock. • TIM5_LSE: TIM5 CH4 input is connected to LSE clock. • TIM5_RTC: TIM5 CH4 input is connected to RTC Output event. • TIM11_GPIO: TIM11 CH4 input is connected to dedicated Timer pin(default) • TIM11_HSE: TIM11 CH4 input is connected to HSE_RTC clock (HSE divided by a programmable prescaler)

Return values

None

STM32F4XX Interrupt Number Definition, according to the selected device in Library_configuration_section.

5.148.1 Detailed Description

5.148.2 Macro Definition Documentation

5.148.2.1 __CM4_REV

```
#define __CM4_REV 0x0001
```

Configuration of the Cortex-M4 Processor and Core Peripherals.

Core revision r0p1

5.148.2.2 __FPU_PRESENT

```
#define __FPU_PRESENT 1
```

FPU present

5.148.2.3 __MPU_PRESENT

```
#define __MPU_PRESENT 1
```

STM32F4XX provides an MPU

5.148.2.4 __NVIC_PRIO_BITS

```
#define __NVIC_PRIO_BITS 4
```

STM32F4XX uses 4 Bits for the Priority Levels

5.148.2.5 __Vendor_SysTickConfig

```
#define __Vendor_SysTickConfig 0
```

Set to 1 if different SysTick Config is used

5.148.3 Enumeration Type Documentation

5.148.3.1 IRQn

```
enum IRQn
```

STM32F4XX Interrupt Number Definition, according to the selected device in Library_configuration_section.

Enumerator

NonMaskableInt_IRQn	2 Non Maskable Interrupt
MemoryManagement_IRQn	4 Cortex-M4 Memory Management Interrupt
BusFault_IRQn	5 Cortex-M4 Bus Fault Interrupt
UsageFault_IRQn	6 Cortex-M4 Usage Fault Interrupt
SVCall_IRQn	11 Cortex-M4 SV Call Interrupt
DebugMonitor_IRQn	12 Cortex-M4 Debug Monitor Interrupt
PendSV_IRQn	14 Cortex-M4 Pend SV Interrupt
SysTick_IRQn	15 Cortex-M4 System Tick Interrupt
WWDG_IRQn	Window WatchDog Interrupt
PVD_IRQn	PVD through EXTI Line detection Interrupt
TAMP_STAMP_IRQn	Tamper and TimeStamp interrupts through the EXTI line
RTC_WKUP_IRQn	RTC Wakeup interrupt through the EXTI line
FLASH_IRQn	FLASH global Interrupt

Enumerator

RCC_IRQn	RCC global Interrupt
EXTI0_IRQn	EXTI Line0 Interrupt
EXTI1_IRQn	EXTI Line1 Interrupt
EXTI2_IRQn	EXTI Line2 Interrupt
EXTI3_IRQn	EXTI Line3 Interrupt
EXTI4_IRQn	EXTI Line4 Interrupt
DMA1_Stream0_IRQn	DMA1 Stream 0 global Interrupt
DMA1_Stream1_IRQn	DMA1 Stream 1 global Interrupt
DMA1_Stream2_IRQn	DMA1 Stream 2 global Interrupt
DMA1_Stream3_IRQn	DMA1 Stream 3 global Interrupt
DMA1_Stream4_IRQn	DMA1 Stream 4 global Interrupt
DMA1_Stream5_IRQn	DMA1 Stream 5 global Interrupt
DMA1_Stream6_IRQn	DMA1 Stream 6 global Interrupt
ADC_IRQn	ADC1, ADC2 and ADC3 global Interrupts
CAN1_TX_IRQn	CAN1 TX Interrupt
CAN1_RX0_IRQn	CAN1 RX0 Interrupt
CAN1_RX1_IRQn	CAN1 RX1 Interrupt
CAN1_SCE_IRQn	CAN1 SCE Interrupt
EXTI9_5_IRQn	External Line[9:5] Interrupts
TIM1_BRK_TIM9_IRQn	TIM1 Break interrupt and TIM9 global interrupt
TIM1_UP_TIM10_IRQn	TIM1 Update Interrupt and TIM10 global interrupt
TIM1_TRG_COM_TIM11_IRQn	TIM1 Trigger and Commutation Interrupt and TIM11 global interrupt
TIM1_CC_IRQn	TIM1 Capture Compare Interrupt
TIM2_IRQn	TIM2 global Interrupt
TIM3_IRQn	TIM3 global Interrupt
TIM4_IRQn	TIM4 global Interrupt
I2C1_EV_IRQn	I2C1 Event Interrupt
I2C1_ER_IRQn	I2C1 Error Interrupt

Enumerator

I2C2_EV_IRQn	I2C2 Event Interrupt
I2C2_ER_IRQn	I2C2 Error Interrupt
SPI1_IRQn	SPI1 global Interrupt
SPI2_IRQn	SPI2 global Interrupt
USART1_IRQn	USART1 global Interrupt
USART2_IRQn	USART2 global Interrupt
USART3_IRQn	USART3 global Interrupt
EXTI15_10_IRQn	External Line[15:10] Interrupts
RTC_Alarm_IRQn	RTC Alarm (A and B) through EXTI Line Interrupt
OTG_FS_WKUP_IRQn	USB OTG FS Wakeup through EXTI line interrupt
TIM8_BRK_TIM12_IRQn	TIM8 Break Interrupt and TIM12 global interrupt
TIM8_UP_TIM13_IRQn	TIM8 Update Interrupt and TIM13 global interrupt
TIM8_TRG_COM_TIM14_IRQn	TIM8 Trigger and Commutation Interrupt and TIM14 global interrupt
TIM8_CC_IRQn	TIM8 Capture Compare Interrupt
DMA1_Stream7_IRQn	DMA1 Stream7 Interrupt
FSMC_IRQn	FSMC global Interrupt
SDIO_IRQn	SDIO global Interrupt
TIM5_IRQn	TIM5 global Interrupt
SPI3_IRQn	SPI3 global Interrupt
UART4_IRQn	UART4 global Interrupt
UART5_IRQn	UART5 global Interrupt
TIM6_DAC_IRQn	TIM6 global and DAC1&2 underrun error interrupts
TIM7_IRQn	TIM7 global interrupt
DMA2_Stream0_IRQn	DMA2 Stream 0 global Interrupt
DMA2_Stream1_IRQn	DMA2 Stream 1 global Interrupt
DMA2_Stream2_IRQn	DMA2 Stream 2 global Interrupt
DMA2_Stream3_IRQn	DMA2 Stream 3 global Interrupt
DMA2_Stream4_IRQn	DMA2 Stream 4 global Interrupt

Enumerator

ETH_IRQn	Ethernet global Interrupt
ETH_WKUP_IRQn	Ethernet Wakeup through EXTI line Interrupt
CAN2_TX_IRQn	CAN2 TX Interrupt
CAN2_RX0_IRQn	CAN2 RX0 Interrupt
CAN2_RX1_IRQn	CAN2 RX1 Interrupt
CAN2_SCE_IRQn	CAN2 SCE Interrupt
OTG_FS_IRQn	USB OTG FS global Interrupt
DMA2_Stream5_IRQn	DMA2 Stream 5 global interrupt
DMA2_Stream6_IRQn	DMA2 Stream 6 global interrupt
DMA2_Stream7_IRQn	DMA2 Stream 7 global interrupt
USART6_IRQn	USART6 global interrupt
I2C3_EV_IRQn	I2C3 event interrupt
I2C3_ER_IRQn	I2C3 error interrupt
OTG_HS_EP1_OUT_IRQn	USB OTG HS End Point 1 Out global interrupt
OTG_HS_EP1_IN_IRQn	USB OTG HS End Point 1 In global interrupt
OTG_HS_WKUP_IRQn	USB OTG HS Wakeup through EXTI interrupt
OTG_HS_IRQn	USB OTG HS global interrupt
DCMI_IRQn	DCMI global interrupt
CRYP_IRQn	CRYP crypto global interrupt
HASH_RNG_IRQn	Hash and Rng global interrupt
FPU_IRQn	FPU global interrupt

5.154.1 Detailed Description

5.154.2 Macro Definition Documentation

5.154.2.1 ADC_CCR_ADCPRE

```
#define ADC_CCR_ADCPRE ((uint32_t)0x00030000)
```

ADCPRE[1:0] bits (ADC prescaler)

5.154.2.2 ADC_CCR_ADCPRE_0

```
#define ADC_CCR_ADCPRE_0 ((uint32_t)0x00010000)
```

Bit 0

5.154.2.3 ADC_CCR_ADCPRE_1

```
#define ADC_CCR_ADCPRE_1 ((uint32_t)0x00020000)
```

Bit 1

5.154.2.4 ADC_CCR_DDS

```
#define ADC_CCR_DDS ((uint32_t)0x00002000)
```

DMA disable selection (Multi-ADC mode)

5.154.2.5 ADC_CCR_DELAY

```
#define ADC_CCR_DELAY ((uint32_t)0x00000F00)
```

DELAY[3:0] bits (Delay between 2 sampling phases)

5.154.2.6 ADC_CCR_DELAY_0

```
#define ADC_CCR_DELAY_0 ((uint32_t)0x00000100)
```

Bit 0

5.154.2.7 ADC_CCR_DELAY_1

```
#define ADC_CCR_DELAY_1 ((uint32_t)0x00000200)
```

Bit 1

5.154.2.8 ADC_CCR_DELAY_2

```
#define ADC_CCR_DELAY_2 ((uint32_t)0x00000400)
```

Bit 2

5.154.2.9 ADC_CCR_DELAY_3

```
#define ADC_CCR_DELAY_3 ((uint32_t)0x00000800)
```

Bit 3

5.154.2.10 ADC_CCR_DMA

```
#define ADC_CCR_DMA ((uint32_t)0x0000C000)
```

DMA[1:0] bits (Direct Memory Access mode for multimode)

5.154.2.11 ADC_CCR_DMA_0

```
#define ADC_CCR_DMA_0 ((uint32_t)0x00004000)
```

Bit 0

5.154.2.12 ADC_CCR_DMA_1

```
#define ADC_CCR_DMA_1 ((uint32_t)0x00008000)
```

Bit 1

5.154.2.13 ADC_CCR_MULTI

```
#define ADC_CCR_MULTI ((uint32_t)0x0000001F)
```

MULTI[4:0] bits (Multi-ADC mode selection)

5.154.2.14 ADC_CCR_MULTI_0

```
#define ADC_CCR_MULTI_0 ((uint32_t)0x00000001)
```

Bit 0

5.154.2.15 ADC_CCR_MULTI_1

```
#define ADC_CCR_MULTI_1 ((uint32_t)0x00000002)
```

Bit 1

5.154.2.16 ADC_CCR_MULTI_2

```
#define ADC_CCR_MULTI_2 ((uint32_t)0x00000004)
```

Bit 2

5.154.2.17 ADC_CCR_MULTI_3

```
#define ADC_CCR_MULTI_3 ((uint32_t)0x00000008)
```

Bit 3

5.154.2.18 ADC_CCR_MULTI_4

```
#define ADC_CCR_MULTI_4 ((uint32_t)0x00000010)
```

Bit 4

5.154.2.19 ADC_CCR_TSVREFE

```
#define ADC_CCR_TSVREFE ((uint32_t)0x00800000)
```

Temperature Sensor and VREFINT Enable

5.154.2.20 ADC_CCR_VBATE

```
#define ADC_CCR_VBATE ((uint32_t)0x00400000)
```

VBAT Enable

5.154.2.21 ADC_CDR_DATA1

```
#define ADC_CDR_DATA1 ((uint32_t)0x0000FFFF)
```

1st data of a pair of regular conversions

5.154.2.22 ADC_CDR_DATA2

```
#define ADC_CDR_DATA2 ((uint32_t)0xFFFF0000)
```

2nd data of a pair of regular conversions

5.154.2.23 ADC_CR1_AWDCH

```
#define ADC_CR1_AWDCH ((uint32_t)0x0000001F)
```

AWDCH[4:0] bits (Analog watchdog channel select bits)

5.154.2.24 ADC_CR1_AWDCH_0

```
#define ADC_CR1_AWDCH_0 ((uint32_t)0x00000001)
```

Bit 0

5.154.2.25 ADC_CR1_AWDCH_1

```
#define ADC_CR1_AWDCH_1 ((uint32_t)0x00000002)
```

Bit 1

5.154.2.26 ADC_CR1_AWDCH_2

```
#define ADC_CR1_AWDCH_2 ((uint32_t)0x00000004)
```

Bit 2

5.154.2.27 ADC_CR1_AWDCH_3

```
#define ADC_CR1_AWDCH_3 ((uint32_t)0x00000008)
```

Bit 3

5.154.2.28 ADC_CR1_AWDCH_4

```
#define ADC_CR1_AWDCH_4 ((uint32_t)0x00000010)
```

Bit 4

5.154.2.29 ADC_CR1_AWDEN

```
#define ADC_CR1_AWDEN ((uint32_t)0x00800000)
```

Analog watchdog enable on regular channels

5.154.2.30 ADC_CR1_AWDIE

```
#define ADC_CR1_AWDIE ((uint32_t)0x00000040)
```

AAnalog Watchdog interrupt enable

5.154.2.31 ADC_CR1_AWDSGL

```
#define ADC_CR1_AWDSGL ((uint32_t)0x00000200)
```

Enable the watchdog on a single channel in scan mode

5.154.2.32 ADC_CR1_DISCEN

```
#define ADC_CR1_DISCEN ((uint32_t)0x00000800)
```

Discontinuous mode on regular channels

5.154.2.33 ADC_CR1_DISCNUM

```
#define ADC_CR1_DISCNUM ((uint32_t)0x0000E000)
```

DISCNUM[2:0] bits (Discontinuous mode channel count)

5.154.2.34 ADC_CR1_DISCNUM_0

```
#define ADC_CR1_DISCNUM_0 ((uint32_t)0x00002000)
```

Bit 0

5.154.2.35 ADC_CR1_DISCNUM_1

```
#define ADC_CR1_DISCNUM_1 ((uint32_t)0x00004000)
```

Bit 1

5.154.2.36 ADC_CR1_DISCNUM_2

```
#define ADC_CR1_DISCNUM_2 ((uint32_t)0x00008000)
```

Bit 2

5.154.2.37 ADC_CR1_EOCIE

```
#define ADC_CR1_EOCIE ((uint32_t)0x00000020)
```

Interrupt enable for EOC

5.154.2.38 ADC_CR1_JAUTO

```
#define ADC_CR1_JAUTO ((uint32_t)0x00000400)
```

Automatic injected group conversion

5.154.2.39 ADC_CR1_JAWDEN

```
#define ADC_CR1_JAWDEN ((uint32_t)0x00400000)
```

Analog watchdog enable on injected channels

5.154.2.40 ADC_CR1_JDISCEN

```
#define ADC_CR1_JDISCEN ((uint32_t)0x00001000)
```

Discontinuous mode on injected channels

5.154.2.41 ADC_CR1_JEOCIE

```
#define ADC_CR1_JEOCIE ((uint32_t)0x00000080)
```

Interrupt enable for injected channels

5.154.2.42 ADC_CR1_OVRIE

```
#define ADC_CR1_OVRIE ((uint32_t)0x04000000)
```

overrun interrupt enable

5.154.2.43 ADC_CR1_RES

```
#define ADC_CR1_RES ((uint32_t)0x03000000)
```

RES[2:0] bits (Resolution)

5.154.2.44 ADC_CR1_RES_0

```
#define ADC_CR1_RES_0 ((uint32_t)0x01000000)
```

Bit 0

5.154.2.45 ADC_CR1_RES_1

```
#define ADC_CR1_RES_1 ((uint32_t)0x02000000)
```

Bit 1

5.154.2.46 ADC_CR1_SCAN

```
#define ADC_CR1_SCAN ((uint32_t)0x00000100)
```

Scan mode

5.154.2.47 ADC_CR2_ADON

```
#define ADC_CR2_ADON ((uint32_t)0x00000001)
```

A/D Converter ON / OFF

5.154.2.48 ADC_CR2_ALIGN

```
#define ADC_CR2_ALIGN ((uint32_t)0x00000800)
```

Data Alignment

5.154.2.49 ADC_CR2_CONT

```
#define ADC_CR2_CONT ((uint32_t)0x00000002)
```

Continuous Conversion

5.154.2.50 ADC_CR2_DDS

```
#define ADC_CR2_DDS ((uint32_t)0x00000200)
```

DMA disable selection (Single ADC)

5.154.2.51 ADC_CR2_DMA

```
#define ADC_CR2_DMA ((uint32_t)0x00000100)
```

Direct Memory access mode

5.154.2.52 ADC_CR2_EOCS

```
#define ADC_CR2_EOCS ((uint32_t)0x00000400)
```

End of conversion selection

5.154.2.53 ADC_CR2_EXTEN

```
#define ADC_CR2_EXTEN ((uint32_t)0x30000000)
```

EXTEN[1:0] bits (External Trigger Conversion mode for regular channelsp)

5.154.2.54 ADC_CR2_EXTEN_0

```
#define ADC_CR2_EXTEN_0 ((uint32_t)0x10000000)
```

Bit 0

5.154.2.55 ADC_CR2_EXTEN_1

```
#define ADC_CR2_EXTEN_1 ((uint32_t)0x20000000)
```

Bit 1

5.154.2.56 ADC_CR2_EXTSEL

```
#define ADC_CR2_EXTSEL ((uint32_t)0x0F000000)
```

EXTSEL[3:0] bits (External Event Select for regular group)

5.154.2.57 ADC_CR2_EXTSEL_0

```
#define ADC_CR2_EXTSEL_0 ((uint32_t)0x01000000)
```

Bit 0

5.154.2.58 ADC_CR2_EXTSEL_1

```
#define ADC_CR2_EXTSEL_1 ((uint32_t)0x02000000)
```

Bit 1

5.154.2.59 ADC_CR2_EXTSEL_2

```
#define ADC_CR2_EXTSEL_2 ((uint32_t)0x04000000)
```

Bit 2

5.154.2.60 ADC_CR2_EXTSEL_3

```
#define ADC_CR2_EXTSEL_3 ((uint32_t)0x08000000)
```

Bit 3

5.154.2.61 ADC_CR2_JEXTEN

```
#define ADC_CR2_JEXTEN ((uint32_t)0x00300000)
```

JEXTEN[1:0] bits (External Trigger Conversion mode for injected channelsp)

5.154.2.62 ADC_CR2_JEXTEN_0

```
#define ADC_CR2_JEXTEN_0 ((uint32_t)0x00100000)
```

Bit 0

5.154.2.63 ADC_CR2_JEXTEN_1

```
#define ADC_CR2_JEXTEN_1 ((uint32_t)0x00200000)
```

Bit 1

5.154.2.64 ADC_CR2_JEXTSEL

```
#define ADC_CR2_JEXTSEL ((uint32_t)0x000F0000)
```

JEXTSEL[3:0] bits (External event select for injected group)

5.154.2.65 ADC_CR2_JEXTSEL_0

```
#define ADC_CR2_JEXTSEL_0 ((uint32_t)0x00010000)
```

Bit 0

5.154.2.66 ADC_CR2_JEXTSEL_1

```
#define ADC_CR2_JEXTSEL_1 ((uint32_t)0x00020000)
```

Bit 1

5.154.2.67 ADC_CR2_JEXTSEL_2

```
#define ADC_CR2_JEXTSEL_2 ((uint32_t)0x00040000)
```

Bit 2

5.154.2.68 ADC_CR2_JEXTSEL_3

```
#define ADC_CR2_JEXTSEL_3 ((uint32_t)0x00080000)
```

Bit 3

5.154.2.69 ADC_CR2_JSWSTART

```
#define ADC_CR2_JSWSTART ((uint32_t)0x00400000)
```

Start Conversion of injected channels

5.154.2.70 ADC_CR2_SWSTART

```
#define ADC_CR2_SWSTART ((uint32_t)0x40000000)
```

Start Conversion of regular channels

5.154.2.71 ADC_CSR_AWD1

```
#define ADC_CSR_AWD1 ((uint32_t)0x00000001)
```

ADC1 Analog watchdog flag

5.154.2.72 ADC_CSR_AWD2

```
#define ADC_CSR_AWD2 ((uint32_t)0x00000100)
```

ADC2 Analog watchdog flag

5.154.2.73 ADC_CSR_AWD3

```
#define ADC_CSR_AWD3 ((uint32_t)0x00010000)
```

ADC3 Analog watchdog flag

5.154.2.74 ADC_CSR_DOVR1

```
#define ADC_CSR_DOVR1 ((uint32_t)0x00000020)
```

ADC1 DMA overrun flag

5.154.2.75 ADC_CSR_DOVR2

```
#define ADC_CSR_DOVR2 ((uint32_t)0x00002000)
```

ADC2 DMA overrun flag

5.154.2.76 ADC_CSR_DOVR3

Variables

- uint32_t SystemCoreClock

5.158.1 Detailed Description

5.158.2 Variable Documentation

5.158.2.1 SystemCoreClock

```
uint32_t SystemCoreClock  [extern]
```

System Clock Frequency (Core Clock)

5.159 STM32F4xx_System_Exported_Constants

5.160 STM32F4xx_System_Exported_Macros

5.161 STM32F4xx_System_Exported_Functions

Functions

- void SystemInit (void)

  Setup the microcontroller system Initialize the Embedded Flash Interface, the PLL and update the SystemFrequency variable.
- void SystemCoreClockUpdate (void)

  Update SystemCoreClock variable according to Clock Register Values. The SystemCoreClock variable contains the core clock (HCLK), it can be used by the user application to setup the SysTick timer or configure other parameters.

5.161.1 Detailed Description

5.161.2 Function Documentation

5.161.2.1 SystemCoreClockUpdate()

```
void SystemCoreClockUpdate (
            void  )
```

Update SystemCoreClock variable according to Clock Register Values. The SystemCoreClock variable contains the core clock (HCLK), it can be used by the user application to setup the SysTick timer or configure other parameters.

Note

Each time the core clock (HCLK) changes, this function must be called to update SystemCoreClock variable value. Otherwise, any configuration based on this variable will be incorrect.

- The system frequency computed by this function is not the real frequency in the chip. It is calculated based on the predefined constant and the selected clock source:

- If SYSCLK source is HSI, SystemCoreClock will contain the HSI_VALUE(∗)
- If SYSCLK source is HSE, SystemCoreClock will contain the HSE_VALUE(∗∗)
- If SYSCLK source is PLL, SystemCoreClock will contain the HSE_VALUE(∗∗) or HSI_VALUE(∗) multiplied/divided by the PLL factors.

(∗) HSI_VALUE is a constant defined in stm32f4xx.h file (default value 16 MHz) but the real value may vary depending on the variations in voltage and temperature.

(∗∗) HSE_VALUE is a constant defined in stm32f4xx.h file (default value 25 MHz), user has to ensure that HSE_↩ VALUE is same as the real frequency of the crystal used. Otherwise, this function may have wrong result.

- The result of this function could be not correct when using fractional value for HSE crystal.

Parameters

None	

Return values

5.168 STM32F4xx_System_Private_Functions

Functions

- void SystemInit (void)

  Setup the microcontroller system Initialize the Embedded Flash Interface, the PLL and update the SystemFrequency variable.
- void SystemCoreClockUpdate (void)

  Update SystemCoreClock variable according to Clock Register Values. The SystemCoreClock variable contains the core clock (HCLK), it can be used by the user application to setup the SysTick timer or configure other parameters.

5.168.1 Detailed Description

5.168.2 Function Documentation

5.168.2.1 SystemCoreClockUpdate()

```
void SystemCoreClockUpdate (
            void  )
```

Update SystemCoreClock variable according to Clock Register Values. The SystemCoreClock variable contains the core clock (HCLK), it can be used by the user application to setup the SysTick timer or configure other parameters.

Note

Each time the core clock (HCLK) changes, this function must be called to update SystemCoreClock variable value. Otherwise, any configuration based on this variable will be incorrect.

- The system frequency computed by this function is not the real frequency in the chip. It is calculated based on the predefined constant and the selected clock source:

- If SYSCLK source is HSI, SystemCoreClock will contain the HSI_VALUE(∗)
- If SYSCLK source is HSE, SystemCoreClock will contain the HSE_VALUE(∗∗)
- If SYSCLK source is PLL, SystemCoreClock will contain the HSE_VALUE(∗∗) or HSI_VALUE(∗) multiplied/divided by the PLL factors.

(∗) HSI_VALUE is a constant defined in stm32f4xx.h file (default value 16 MHz) but the real value may vary depending on the variations in voltage and temperature.

(∗∗) HSE_VALUE is a constant defined in stm32f4xx.h file (default value 25 MHz), user has to ensure that HSE_↩ VALUE is same as the real frequency of the crystal used. Otherwise, this function may have wrong result.

- The result of this function could be not correct when using fractional value for HSE crystal.

Chapter 6

Data Structure Documentation

6.1 ADC_Common_TypeDef Struct Reference

Data Fields

- __IO uint32_t CSR
- __IO uint32_t CCR
- __IO uint32_t CDR

6.1.1 Field Documentation

6.1.1.1 CCR

```
__IO uint32_t CCR
```

ADC common control register, Address offset: ADC1 base address + 0x304

6.1.1.2 CDR

```
__IO uint32_t CDR
```

ADC common regular data register for dual AND triple modes, Address offset: ADC1 base address + 0x308

6.1.1.3 CSR

```
__IO uint32_t CSR
```

ADC Common status register, Address offset: ADC1 base address + 0x300

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.2 ADC_TypeDef Struct Reference

Analog to Digital Converter

```
#include <stm32f4xx.h>
```

Data Fields

- __IO uint32_t SR
- __IO uint32_t CR1
- __IO uint32_t CR2
- __IO uint32_t SMPR1
- __IO uint32_t SMPR2
- __IO uint32_t JOFR1
- __IO uint32_t JOFR2
- __IO uint32_t JOFR3
- __IO uint32_t JOFR4
- __IO uint32_t HTR
- __IO uint32_t LTR
- __IO uint32_t SQR1
- __IO uint32_t SQR2
- __IO uint32_t SQR3
- __IO uint32_t JSQR
- __IO uint32_t JDR1
- __IO uint32_t JDR2
- __IO uint32_t JDR3
- __IO uint32_t JDR4
- __IO uint32_t DR

6.2.1 Detailed Description

Analog to Digital Converter

6.2.2 Field Documentation

6.2.2.1 CR1

```
__IO uint32_t CR1
```

ADC control register 1, Address offset: 0x04

6.2.2.2 CR2

```
__IO uint32_t CR2
```

ADC control register 2, Address offset: 0x08

6.2.2.3 DR

```
__IO uint32_t DR
```

ADC regular data register, Address offset: 0x4C

6.2.2.4 HTR

```
__IO uint32_t HTR
```

ADC watchdog higher threshold register, Address offset: 0x24

6.2.2.5 JDR1

```
__IO uint32_t JDR1
```

ADC injected data register 1, Address offset: 0x3C

6.2.2.6 JDR2

```
__IO uint32_t JDR2
```

ADC injected data register 2, Address offset: 0x40

6.2.2.7 JDR3

```
__IO uint32_t JDR3
```

ADC injected data register 3, Address offset: 0x44

6.2.2.8 JDR4

```
__IO uint32_t JDR4
```

ADC injected data register 4, Address offset: 0x48

6.2.2.9 JOFR1

```
__IO uint32_t JOFR1
```

ADC injected channel data offset register 1, Address offset: 0x14

6.2.2.10 JOFR2

```
__IO uint32_t JOFR2
```

ADC injected channel data offset register 2, Address offset: 0x18

6.2.2.11 JOFR3

```
__IO uint32_t JOFR3
```

ADC injected channel data offset register 3, Address offset: 0x1C

6.2.2.12 JOFR4

```
__IO uint32_t JOFR4
```

ADC injected channel data offset register 4, Address offset: 0x20

6.2.2.13 JSQR

```
__IO uint32_t JSQR
```

ADC injected sequence register, Address offset: 0x38

6.2.2.14 LTR

```
__IO uint32_t LTR
```

ADC watchdog lower threshold register, Address offset: 0x28

6.2.2.15 SMPR1

```
__IO uint32_t SMPR1
```

ADC sample time register 1, Address offset: 0x0C

6.2.2.16 SMPR2

```
__IO uint32_t SMPR2
```

ADC sample time register 2, Address offset: 0x10

6.2.2.17 SQR1

```
__IO uint32_t SQR1
```

ADC regular sequence register 1, Address offset: 0x2C

6.2.2.18 SQR2

```
__IO uint32_t SQR2
```

ADC regular sequence register 2, Address offset: 0x30

6.2.2.19 SQR3

```
__IO uint32_t SQR3
```

ADC regular sequence register 3, Address offset: 0x34

6.2.2.20 SR

```
__IO uint32_t SR
```

ADC status register, Address offset: 0x00

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.3 APSR_Type Union Reference

Union type to access the Application Program Status Register (APSR).

```
#include <core_cm4.h>
```

Data Fields

- struct {
  uint32_t _reserved0:16
  uint32_t GE:4
  uint32_t _reserved1:7
  uint32_t Q:1
  uint32_t V:1
  uint32_t C:1
  uint32_t Z:1
  uint32_t N:1
  } b
- uint32_t w

6.3.1 Detailed Description

Union type to access the Application Program Status Register (APSR).

The documentation for this union was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/core_cm4.h

6.4 CAN_FIFOMailBox_TypeDef Struct Reference

Controller Area Network FIFOMailBox.

`#include <stm32f4xx.h>`

Data Fields

- __IO uint32_t RIR
- __IO uint32_t RDTR
- __IO uint32_t RDLR
- __IO uint32_t RDHR

6.4.1 Detailed Description

Controller Area Network FIFOMailBox.

6.4.2 Field Documentation

6.4.2.1 RDHR

`__IO uint32_t RDHR`

CAN receive FIFO mailbox data high register

6.4.2.2 RDLR

`__IO uint32_t RDLR`

CAN receive FIFO mailbox data low register

6.4.2.3 RDTR

`__IO uint32_t RDTR`

CAN receive FIFO mailbox data length control and time stamp register

6.4.2.4 RIR

`__IO uint32_t RIR`

CAN receive FIFO mailbox identifier register

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.5 CAN_FilterRegister_TypeDef Struct Reference

Controller Area Network FilterRegister.

`#include <stm32f4xx.h>`

Data Fields

- __IO uint32_t FR1
- __IO uint32_t FR2

6.5.1 Detailed Description

Controller Area Network FilterRegister.

6.5.2 Field Documentation

6.5.2.1 FR1

`__IO uint32_t FR1`

CAN Filter bank register 1

6.5.2.2 FR2

`__IO uint32_t FR2`

CAN Filter bank register 1

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.6 CAN_TxMailBox_TypeDef Struct Reference

Controller Area Network TxMailBox.

`#include <stm32f4xx.h>`

Data Fields

- __IO uint32_t TIR
- __IO uint32_t TDTR
- __IO uint32_t TDLR
- __IO uint32_t TDHR

6.6.1 Detailed Description

Controller Area Network TxMailBox.

6.6.2 Field Documentation

6.6.2.1 TDHR

```
__IO uint32_t TDHR
```

CAN mailbox data high register

6.6.2.2 TDLR

```
__IO uint32_t TDLR
```

CAN mailbox data low register

6.6.2.3 TDTR

```
__IO uint32_t TDTR
```

CAN mailbox data length control and time stamp register

6.6.2.4 TIR

```
__IO uint32_t TIR
```

CAN TX mailbox identifier register

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.7 CAN_TypeDef Struct Reference

Controller Area Network.

```
#include <stm32f4xx.h>
```

Data Fields

- __IO uint32_t MCR
- __IO uint32_t MSR
- __IO uint32_t TSR
- __IO uint32_t RF0R
- __IO uint32_t RF1R
- __IO uint32_t IER
- __IO uint32_t ESR
- __IO uint32_t BTR
- uint32_t RESERVED0 [88]
- CAN_TxMailBox_TypeDef sTxMailBox [3]
- CAN_FIFOMailBox_TypeDef sFIFOMailBox [2]
- uint32_t RESERVED1 [12]
- __IO uint32_t FMR
- __IO uint32_t FM1R
- uint32_t RESERVED2
- __IO uint32_t FS1R
- uint32_t RESERVED3
- __IO uint32_t FFA1R
- uint32_t RESERVED4
- __IO uint32_t FA1R
- uint32_t RESERVED5 [8]
- CAN_FilterRegister_TypeDef sFilterRegister [28]

6.7.1 Detailed Description

Controller Area Network.

6.7.2 Field Documentation

6.7.2.1 BTR

```
__IO uint32_t BTR
```

CAN bit timing register, Address offset: 0x1C

6.7.2.2 ESR

```
__IO uint32_t ESR
```

CAN error status register, Address offset: 0x18

6.7.2.3 FA1R

```
__IO uint32_t FA1R
```

CAN filter activation register, Address offset: 0x21C

6.7.2.4 FFA1R

```
__IO uint32_t FFA1R
```

CAN filter FIFO assignment register, Address offset: 0x214

6.7.2.5 FM1R

```
__IO uint32_t FM1R
```

CAN filter mode register, Address offset: 0x204

6.7.2.6 FMR

```
__IO uint32_t FMR
```

CAN filter master register, Address offset: 0x200

6.7.2.7 FS1R

```
__IO uint32_t FS1R
```

CAN filter scale register, Address offset: 0x20C

6.7.2.8 IER

```
__IO uint32_t IER
```

CAN interrupt enable register, Address offset: 0x14

6.7.2.9 MCR

```
__IO uint32_t MCR
```

CAN master control register, Address offset: 0x00

6.7.2.10 MSR

```
__IO uint32_t MSR
```

CAN master status register, Address offset: 0x04

6.7.2.11 RESERVED0

```
uint32_t RESERVED0[88]
```

Reserved, 0x020 - 0x17F

6.7.2.12 RESERVED1

```
uint32_t RESERVED1[12]
```

Reserved, 0x1D0 - 0x1FF

6.7.2.13 RESERVED2

```
uint32_t RESERVED2
```

Reserved, 0x208

6.7.2.14 RESERVED3

```
uint32_t RESERVED3
```

Reserved, 0x210

6.7.2.15 RESERVED4

```
uint32_t RESERVED4
```

Reserved, 0x218

6.7.2.16 RESERVED5

```
uint32_t RESERVED5[8]
```

Reserved, 0x220-0x23F

6.7.2.17 RF0R

```
__IO uint32_t RF0R
```

CAN receive FIFO 0 register, Address offset: 0x0C

6.7.2.18 RF1R

```
__IO uint32_t RF1R
```

CAN receive FIFO 1 register, Address offset: 0x10

6.7.2.19 sFIFOMailBox

```
CAN_FIFOMailBox_TypeDef sFIFOMailBox[2]
```

CAN FIFO MailBox, Address offset: 0x1B0 - 0x1CC

6.7.2.20 sFilterRegister

```
CAN_FilterRegister_TypeDef sFilterRegister[28]
```

CAN Filter Register, Address offset: 0x240-0x31C

6.7.2.21 sTxMailBox

```
CAN_TxMailBox_TypeDef sTxMailBox[3]
```

CAN Tx MailBox, Address offset: 0x180 - 0x1AC

6.7.2.22 TSR

```
__IO uint32_t TSR
```

CAN transmit status register, Address offset: 0x08

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.8 CONTROL_Type Union Reference

Union type to access the Control Registers (CONTROL).

```
#include <core_cm4.h>
```

Data Fields

- struct {
  uint32_t nPRIV:1
  uint32_t SPSEL:1
  uint32_t FPCA:1
  uint32_t _reserved0:29
  } b
- uint32_t w

6.8.1 Detailed Description

Union type to access the Control Registers (CONTROL).

The documentation for this union was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/core_cm4.h

6.9 CoreDebug_Type Struct Reference

Structure type to access the Core Debug Register (CoreDebug).

```
#include <core_cm4.h>
```

Data Fields

- __IO uint32_t DHCSR
- __O uint32_t DCRSR
- __IO uint32_t DCRDR
- __IO uint32_t DEMCR

6.9.1 Detailed Description

Structure type to access the Core Debug Register (CoreDebug).

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/core_cm4.h

6.10 CRC_TypeDef Struct Reference

CRC calculation unit.

`#include <stm32f4xx.h>`

Data Fields

- __IO uint32_t DR
- __IO uint8_t IDR
- uint8_t RESERVED0
- uint16_t RESERVED1
- __IO uint32_t CR

6.10.1 Detailed Description

CRC calculation unit.

6.10.2 Field Documentation

6.10.2.1 CR

`__IO uint32_t CR`

CRC Control register, Address offset: 0x08

6.10.2.2 DR

`__IO uint32_t DR`

CRC Data register, Address offset: 0x00

6.10.2.3 IDR

`__IO uint8_t IDR`

CRC Independent data register, Address offset: 0x04

6.10.2.4 RESERVED0

`uint8_t RESERVED0`

Reserved, 0x05

6.10.2.5 RESERVED1

```
uint16_t RESERVED1
```

Reserved, 0x06

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.11 CRYP_TypeDef Struct Reference

Crypto Processor.

```
#include <stm32f4xx.h>
```

Data Fields

- __IO uint32_t CR
- __IO uint32_t SR
- __IO uint32_t DR
- __IO uint32_t DOUT
- __IO uint32_t DMACR
- __IO uint32_t IMSCR
- __IO uint32_t RISR
- __IO uint32_t MISR
- __IO uint32_t K0LR
- __IO uint32_t K0RR
- __IO uint32_t K1LR
- __IO uint32_t K1RR
- __IO uint32_t K2LR
- __IO uint32_t K2RR
- __IO uint32_t K3LR
- __IO uint32_t K3RR
- __IO uint32_t IV0LR
- __IO uint32_t IV0RR
- __IO uint32_t IV1LR
- __IO uint32_t IV1RR

6.11.1 Detailed Description

Crypto Processor.

6.11.2 Field Documentation

6.11.2.1 CR

```
__IO uint32_t CR
```

CRYP control register, Address offset: 0x00

6.11.2.2 DMACR

```
__IO uint32_t DMACR
```

CRYP DMA control register, Address offset: 0x10

6.11.2.3 DOUT

```
__IO uint32_t DOUT
```

CRYP data output register, Address offset: 0x0C

6.11.2.4 DR

```
__IO uint32_t DR
```

CRYP data input register, Address offset: 0x08

6.11.2.5 IMSCR

```
__IO uint32_t IMSCR
```

CRYP interrupt mask set/clear register, Address offset: 0x14

6.11.2.6 IV0LR

```
__IO uint32_t IV0LR
```

CRYP initialization vector left-word register 0, Address offset: 0x40

6.11.2.7 IV0RR

```
__IO uint32_t IV0RR
```

CRYP initialization vector right-word register 0, Address offset: 0x44

6.11.2.8 IV1LR

```
__IO uint32_t IV1LR
```

CRYP initialization vector left-word register 1, Address offset: 0x48

6.11.2.9 IV1RR

```
__IO uint32_t IV1RR
```

CRYP initialization vector right-word register 1, Address offset: 0x4C

6.11.2.10 K0LR

```
__IO uint32_t K0LR
```

CRYP key left register 0, Address offset: 0x20

6.11.2.11 K0RR

```
__IO uint32_t K0RR
```

CRYP key right register 0, Address offset: 0x24

6.11.2.12 K1LR

```
__IO uint32_t K1LR
```

CRYP key left register 1, Address offset: 0x28

6.11.2.13 K1RR

```
__IO uint32_t K1RR
```

CRYP key right register 1, Address offset: 0x2C

6.11.2.14 K2LR

```
__IO uint32_t K2LR
```

CRYP key left register 2, Address offset: 0x30

6.11.2.15 K2RR

```
__IO uint32_t K2RR
```

CRYP key right register 2, Address offset: 0x34

6.11.2.16 K3LR

```
__IO uint32_t K3LR
```

CRYP key left register 3, Address offset: 0x38

6.11.2.17 K3RR

```
__IO uint32_t K3RR
```

CRYP key right register 3, Address offset: 0x3C

6.11.2.18 MISR

```
__IO uint32_t MISR
```

CRYP masked interrupt status register, Address offset: 0x1C

6.11.2.19 RISR

```
__IO uint32_t RISR
```

CRYP raw interrupt status register, Address offset: 0x18

6.11.2.20 SR

```
__IO uint32_t SR
```

CRYP status register, Address offset: 0x04

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.12 DAC_TypeDef Struct Reference

Digital to Analog Converter.

```
#include <stm32f4xx.h>
```

Data Fields

- __IO uint32_t CR
- __IO uint32_t SWTRIGR
- __IO uint32_t DHR12R1
- __IO uint32_t DHR12L1
- __IO uint32_t DHR8R1
- __IO uint32_t DHR12R2
- __IO uint32_t DHR12L2
- __IO uint32_t DHR8R2
- __IO uint32_t DHR12RD
- __IO uint32_t DHR12LD
- __IO uint32_t DHR8RD
- __IO uint32_t DOR1
- __IO uint32_t DOR2
- __IO uint32_t SR

6.12.1 Detailed Description

Digital to Analog Converter.

6.12.2 Field Documentation

6.12.2.1 CR

```
__IO uint32_t CR
```

DAC control register, Address offset: 0x00

6.12.2.2 DHR12L1

```
__IO uint32_t DHR12L1
```

DAC channel1 12-bit left aligned data holding register, Address offset: 0x0C

6.12.2.3 DHR12L2

```
__IO uint32_t DHR12L2
```

DAC channel2 12-bit left aligned data holding register, Address offset: 0x18

6.12.2.4 DHR12LD

```
__IO uint32_t DHR12LD
```

DUAL DAC 12-bit left aligned data holding register, Address offset: 0x24

6.12.2.5 DHR12R1

```
__IO uint32_t DHR12R1
```

DAC channel1 12-bit right-aligned data holding register, Address offset: 0x08

6.12.2.6 DHR12R2

```
__IO uint32_t DHR12R2
```

DAC channel2 12-bit right aligned data holding register, Address offset: 0x14

6.12.2.7 DHR12RD

```
__IO uint32_t DHR12RD
```

Dual DAC 12-bit right-aligned data holding register, Address offset: 0x20

6.12.2.8 DHR8R1

```
__IO uint32_t DHR8R1
```

DAC channel1 8-bit right aligned data holding register, Address offset: 0x10

6.12.2.9 DHR8R2

```
__IO uint32_t DHR8R2
```

DAC channel2 8-bit right-aligned data holding register, Address offset: 0x1C

6.12.2.10 DHR8RD

```
__IO uint32_t DHR8RD
```

DUAL DAC 8-bit right aligned data holding register, Address offset: 0x28

6.12.2.11 DOR1

```
__IO uint32_t DOR1
```

DAC channel1 data output register, Address offset: 0x2C

6.12.2.12 DOR2

```
__IO uint32_t DOR2
```

DAC channel2 data output register, Address offset: 0x30

6.12.2.13 SR

```
__IO uint32_t SR
```

DAC status register, Address offset: 0x34

6.12.2.14 SWTRIGR

```
__IO uint32_t SWTRIGR
```

DAC software trigger register, Address offset: 0x04

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.13 DBGMCU_TypeDef Struct Reference

Debug MCU.

```
#include <stm32f4xx.h>
```

Data Fields

- __IO uint32_t IDCODE
- __IO uint32_t CR
- __IO uint32_t APB1FZ
- __IO uint32_t APB2FZ

6.13.1 Detailed Description

Debug MCU.

6.13.2 Field Documentation

6.13.2.1 APB1FZ

```
__IO uint32_t APB1FZ
```

Debug MCU APB1 freeze register, Address offset: 0x08

6.13.2.2 APB2FZ

```
__IO uint32_t APB2FZ
```

Debug MCU APB2 freeze register, Address offset: 0x0C

6.13.2.3 CR

```
__IO uint32_t CR
```

Debug MCU configuration register, Address offset: 0x04

6.13.2.4 IDCODE

```
__IO uint32_t IDCODE
```

MCU device ID code, Address offset: 0x00

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.14 DCMI_TypeDef Struct Reference

DCMI.

```
#include <stm32f4xx.h>
```

Data Fields

- __IO uint32_t CR
- __IO uint32_t SR
- __IO uint32_t RISR
- __IO uint32_t IER
- __IO uint32_t MISR
- __IO uint32_t ICR
- __IO uint32_t ESCR
- __IO uint32_t ESUR
- __IO uint32_t CWSTRTR
- __IO uint32_t CWSIZER
- __IO uint32_t DR

6.14.1 Detailed Description

DCMI.

6.14.2 Field Documentation

6.14.2.1 CR

```
__IO uint32_t CR
```

DCMI control register 1, Address offset: 0x00

6.14.2.2 CWSIZER

```
__IO uint32_t CWSIZER
```

DCMI crop window size, Address offset: 0x24

6.14.2.3 CWSTRTR

```
__IO uint32_t CWSTRTR
```

DCMI crop window start, Address offset: 0x20

6.14.2.4 DR

```
__IO uint32_t DR
```

DCMI data register, Address offset: 0x28

6.14.2.5 ESCR

```
__IO uint32_t ESCR
```

DCMI embedded synchronization code register, Address offset: 0x18

6.14.2.6 ESUR

```
__IO uint32_t ESUR
```

DCMI embedded synchronization unmask register, Address offset: 0x1C

6.14.2.7 ICR

```
__IO uint32_t ICR
```

DCMI interrupt clear register, Address offset: 0x14

6.14.2.8 IER

```
__IO uint32_t IER
```

DCMI interrupt enable register, Address offset: 0x0C

6.14.2.9 MISR

```
__IO uint32_t MISR
```

DCMI masked interrupt status register, Address offset: 0x10

6.14.2.10 RISR

```
__IO uint32_t RISR
```

DCMI raw interrupt status register, Address offset: 0x08

6.14.2.11 SR

```
__IO uint32_t SR
```

DCMI status register, Address offset: 0x04

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.15 DMA_InitTypeDef Struct Reference

DMA Init structure definition.

```
#include <stm32f4xx_dma.h>
```

Data Fields

- uint32_t DMA_Channel
- uint32_t DMA_PeripheralBaseAddr
- uint32_t DMA_Memory0BaseAddr
- uint32_t DMA_DIR
- uint32_t DMA_BufferSize
- uint32_t DMA_PeripheralInc
- uint32_t DMA_MemoryInc
- uint32_t DMA_PeripheralDataSize
- uint32_t DMA_MemoryDataSize
- uint32_t DMA_Mode
- uint32_t DMA_Priority
- uint32_t DMA_FIFOMode
- uint32_t DMA_FIFOThreshold
- uint32_t DMA_MemoryBurst
- uint32_t DMA_PeripheralBurst

6.15.1 Detailed Description

DMA Init structure definition.

6.15.2 Field Documentation

6.15.2.1 DMA_BufferSize

```
uint32_t DMA_BufferSize
```

Specifies the buffer size, in data unit, of the specified Stream. The data unit is equal to the configuration set in DMA_PeripheralDataSize or DMA_MemoryDataSize members depending in the transfer direction.

6.15.2.2 DMA_Channel

```
uint32_t DMA_Channel
```

Specifies the channel used for the specified stream. This parameter can be a value of DMA_channel

6.15.2.3 DMA_DIR

```
uint32_t DMA_DIR
```

Specifies if the data will be transferred from memory to peripheral, from memory to memory or from peripheral to memory. This parameter can be a value of DMA_data_transfer_direction

6.15.2.4 DMA_FIFOMode

```
uint32_t DMA_FIFOMode
```

Specifies if the FIFO mode or Direct mode will be used for the specified Stream. This parameter can be a value of DMA_fifo_direct_mode

Note

The Direct mode (FIFO mode disabled) cannot be used if the memory-to-memory data transfer is configured on the selected Stream

6.15.2.5 DMA_FIFOThreshold

```
uint32_t DMA_FIFOThreshold
```

Specifies the FIFO threshold level. This parameter can be a value of DMA_fifo_threshold_level

6.15.2.6 DMA_Memory0BaseAddr

```
uint32_t DMA_Memory0BaseAddr
```

Specifies the memory 0 base address for DMAy Streamx. This memory is the default memory used when double buffer mode is not enabled.

6.15.2.7 DMA_MemoryBurst

```
uint32_t DMA_MemoryBurst
```

Specifies the Burst transfer configuration for the memory transfers. It specifies the amount of data to be transferred in a single non interruptable transaction. This parameter can be a value of DMA_memory_burst

Note

The burst mode is possible only if the address Increment mode is enabled.

6.15.2.8 DMA_MemoryDataSize

```
uint32_t DMA_MemoryDataSize
```

Specifies the Memory data width. This parameter can be a value of DMA_memory_data_size

6.15.2.9 DMA_MemoryInc

```
uint32_t DMA_MemoryInc
```

Specifies whether the memory address register should be incremented or not. This parameter can be a value of DMA_memory_incremented_mode

6.15.2.10 DMA_Mode

```
uint32_t DMA_Mode
```

Specifies the operation mode of the DMAy Streamx. This parameter can be a value of DMA_circular_normal_mode

Note

The circular buffer mode cannot be used if the memory-to-memory data transfer is configured on the selected Stream

6.15.2.11 DMA_PeripheralBaseAddr

```
uint32_t DMA_PeripheralBaseAddr
```

Specifies the peripheral base address for DMAy Streamx.

6.15.2.12 DMA_PeripheralBurst

```
uint32_t DMA_PeripheralBurst
```

Specifies the Burst transfer configuration for the peripheral transfers. It specifies the amount of data to be transferred in a single non interruptable transaction. This parameter can be a value of DMA_peripheral_burst

Note

The burst mode is possible only if the address Increment mode is enabled.

6.15.2.13 DMA_PeripheralDataSize

```
uint32_t DMA_PeripheralDataSize
```

Specifies the Peripheral data width. This parameter can be a value of DMA_peripheral_data_size

6.15.2.14 DMA_PeripheralInc

```
uint32_t DMA_PeripheralInc
```

Specifies whether the Peripheral address register should be incremented or not. This parameter can be a value of DMA_peripheral_incremented_mode

6.15.2.15 DMA_Priority

```
uint32_t DMA_Priority
```

Specifies the software priority for the DMAy Streamx. This parameter can be a value of DMA_priority_level

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx_dma.h

6.16 DMA_Stream_TypeDef Struct Reference

DMA Controller.

```
#include <stm32f4xx.h>
```

6.26 GPIO_InitTypeDef Struct Reference

GPIO Init structure definition

```
#include <stm32f4xx_gpio.h>
```

Data Fields

- uint32_t GPIO_Pin
- GPIOMode_TypeDef GPIO_Mode
- GPIOSpeed_TypeDef GPIO_Speed
- GPIOOType_TypeDef GPIO_OType
- GPIOPuPd_TypeDef GPIO_PuPd

6.26.1 Detailed Description

GPIO Init structure definition

6.26.2 Field Documentation

6.26.2.1 GPIO_Mode

```
GPIOMode_TypeDef GPIO_Mode
```

Specifies the operating mode for the selected pins. This parameter can be a value of GPIOMode_TypeDef

6.26.2.2 GPIO_OType

```
GPIOOType_TypeDef GPIO_OType
```

Specifies the operating output type for the selected pins. This parameter can be a value of GPIOOType_TypeDef

6.26.2.3 GPIO_Pin

```
uint32_t GPIO_Pin
```

Specifies the GPIO pins to be configured. This parameter can be any value of GPIO_pins_define

6.26.2.4 GPIO_PuPd

```
GPIOPuPd_TypeDef GPIO_PuPd
```

Specifies the operating Pull-up/Pull down for the selected pins. This parameter can be a value of GPIOPuPd_TypeDef

6.26.2.5 GPIO_Speed

```
GPIOSpeed_TypeDef GPIO_Speed
```

Specifies the speed for the selected pins. This parameter can be a value of GPIOSpeed_TypeDef

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.30 IPSR_Type Union Reference

Union type to access the Interrupt Program Status Register (IPSR).

```
#include <core_cm4.h>
```

Data Fields

- struct {
  uint32_t ISR:9
  uint32_t _reserved0:23
  } b
- uint32_t w

6.30.1 Detailed Description

Union type to access the Interrupt Program Status Register (IPSR).

The documentation for this union was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/core_cm4.h

6.31 ITM_Type Struct Reference

Structure type to access the Instrumentation Trace Macrocell Register (ITM).

```
#include <core_cm4.h>
```

Data Fields

- union {
  __O uint8_t u8
  __O uint16_t u16
  __O uint32_t u32
  } PORT [32]
- uint32_t **RESERVED0** [864]
- __IO uint32_t TER
- uint32_t **RESERVED1** [15]
- __IO uint32_t TPR
- uint32_t **RESERVED2** [15]
- __IO uint32_t TCR

6.31.1 Detailed Description

Structure type to access the Instrumentation Trace Macrocell Register (ITM).

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/core_cm4.h

6.32 IWDG_TypeDef Struct Reference

Independent WATCHDOG.

```
#include <stm32f4xx.h>
```

Data Fields

- __IO uint32_t KR
- __IO uint32_t PR
- __IO uint32_t RLR
- __IO uint32_t SR

6.32.1 Detailed Description

Independent WATCHDOG.

6.32.2 Field Documentation

6.32.2.1 KR

```
__IO uint32_t KR
```

IWDG Key register, Address offset: 0x00

6.32.2.2 PR

```
__IO uint32_t PR
```

IWDG Prescaler register, Address offset: 0x04

6.32.2.3 RLR

```
__IO uint32_t RLR
```

IWDG Reload register, Address offset: 0x08

6.32.2.4 SR

```
__IO uint32_t SR
```

IWDG Status register, Address offset: 0x0C

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.33 NVIC_InitTypeDef Struct Reference

NVIC Init Structure definition

```
#include <misc.h>
```

Data Fields

- uint8_t NVIC_IRQChannel
- uint8_t NVIC_IRQChannelPreemptionPriority
- uint8_t NVIC_IRQChannelSubPriority
- FunctionalState NVIC_IRQChannelCmd

6.33.1 Detailed Description

NVIC Init Structure definition

6.33.2 Field Documentation

6.33.2.1 NVIC_IRQChannel

```
uint8_t NVIC_IRQChannel
```

Specifies the IRQ channel to be enabled or disabled. This parameter can be an enumerator of IRQn_Type enumeration (For the complete STM32 Devices IRQ Channels list, please refer to stm32f4xx.h file)

6.33.2.2 NVIC_IRQChannelCmd

```
FunctionalState NVIC_IRQChannelCmd
```

Specifies whether the IRQ channel defined in NVIC_IRQChannel will be enabled or disabled. This parameter can be set either to ENABLE or DISABLE

6.33.2.3 NVIC_IRQChannelPreemptionPriority

```
uint8_t NVIC_IRQChannelPreemptionPriority
```

Specifies the pre-emption priority for the IRQ channel specified in NVIC_IRQChannel. This parameter can be a value between 0 and 15 as described in the table MISC_NVIC_Priority_Table A lower priority value indicates a higher priority

6.33.2.4 NVIC_IRQChannelSubPriority

```
uint8_t NVIC_IRQChannelSubPriority
```

Specifies the subpriority level for the IRQ channel specified in NVIC_IRQChannel. This parameter can be a value between 0 and 15 as described in the table MISC_NVIC_Priority_Table A lower priority value indicates a higher priority

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/misc.h

6.34 NVIC_Type Struct Reference

Structure type to access the Nested Vectored Interrupt Controller (NVIC).

```
#include <core_cm4.h>
```

Data Fields

- __IO uint32_t ISER [8]
- uint32_t **RESERVED0** [24]
- __IO uint32_t ICER [8]
- uint32_t **RSERVED1** [24]
- __IO uint32_t ISPR [8]

- uint32_t **RESERVED4** [56]
- __IO uint8_t IP [240]
- uint32_t **RESERVED5** [644]
- __O uint32_t STIR

6.34.1 Detailed Description

Structure type to access the Nested Vectored Interrupt Controller (NVIC).

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/core_cm4.h

6.35 PARSE_STORAGE Struct Reference

Data Fields

- int **number_store** [3]
- int **color**
- int **loop_iterator**
- int **var_store** [6]
- int **err_code**

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/logic_layer.h

6.36 PWR_TypeDef Struct Reference

Power Control.

`#include <stm32f4xx.h>`

Data Fields

- __IO uint32_t CR
- __IO uint32_t CSR

6.36.1 Detailed Description

Power Control.

6.36.2 Field Documentation

6.36.2.1 CR

```
__IO uint32_t CR
```

PWR power control register, Address offset: 0x00

6.36.2.2 CSR

```
__IO uint32_t CSR
```

PWR power control/status register, Address offset: 0x04

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.37 RCC_ClocksTypeDef Struct Reference

Data Fields

- uint32_t SYSCLK_Frequency
- uint32_t HCLK_Frequency
- uint32_t PCLK1_Frequency
- uint32_t PCLK2_Frequency

6.37.1 Field Documentation

6.37.1.1 HCLK_Frequency

```
uint32_t HCLK_Frequency
```

HCLK clock frequency expressed in Hz

6.37.1.2 PCLK1_Frequency

```
uint32_t PCLK1_Frequency
```

PCLK1 clock frequency expressed in Hz

6.37.1.3 PCLK2_Frequency

```
uint32_t PCLK2_Frequency
```

PCLK2 clock frequency expressed in Hz

6.37.1.4 SYSCLK_Frequency

```
uint32_t SYSCLK_Frequency
```

SYSCLK clock frequency expressed in Hz

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx_rcc.h

6.38 RCC_TypeDef Struct Reference

Reset and Clock Control.

6.43.1 Detailed Description

SD host Interface.

6.43.2 Field Documentation

6.43.2.1 ARG

```
__IO uint32_t ARG
```

SDIO argument register, Address offset: 0x08

6.43.2.2 CLKCR

```
__IO uint32_t CLKCR
```

SDI clock control register, Address offset: 0x04

6.43.2.3 CMD

```
__IO uint32_t CMD
```

SDIO command register, Address offset: 0x0C

6.43.2.4 DCOUNT

```
__I uint32_t DCOUNT
```

SDIO data counter register, Address offset: 0x30

6.43.2.5 DCTRL

```
__IO uint32_t DCTRL
```

SDIO data control register, Address offset: 0x2C

6.43.2.6 DLEN

```
__IO uint32_t DLEN
```

SDIO data length register, Address offset: 0x28

6.43.2.7 DTIMER

```
__IO uint32_t DTIMER
```

SDIO data timer register, Address offset: 0x24

6.43.2.8 FIFO

```
__IO uint32_t FIFO
```

SDIO data FIFO register, Address offset: 0x80

6.43.2.9 FIFOCNT

```
__I uint32_t FIFOCNT
```

SDIO FIFO counter register, Address offset: 0x48

6.43.2.10 ICR

```
__IO uint32_t ICR
```

SDIO interrupt clear register, Address offset: 0x38

6.43.2.11 MASK

```
__IO uint32_t MASK
```

SDIO mask register, Address offset: 0x3C

6.43.2.12 POWER

```
__IO uint32_t POWER
```

SDIO power control register, Address offset: 0x00

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.46 SysTick_Type Struct Reference

Structure type to access the System Timer (SysTick).

```
#include <core_cm4.h>
```

Data Fields

- __IO uint32_t CTRL
- __IO uint32_t LOAD
- __IO uint32_t VAL
- __I uint32_t CALIB

6.46.1 Detailed Description

Structure type to access the System Timer (SysTick).

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/core_cm4.h

6.47 TIM_BDTRInitTypeDef Struct Reference

BDTR structure definition.

`#include <stm32f4xx_tim.h>`

Data Fields

- uint16_t TIM_OSSRState
- uint16_t TIM_OSSIState
- uint16_t TIM_LOCKLevel
- uint16_t TIM_DeadTime
- uint16_t TIM_Break
- uint16_t TIM_BreakPolarity
- uint16_t TIM_AutomaticOutput

6.47.1 Detailed Description

BDTR structure definition.

Note

This structure is used only with TIM1 and TIM8.

6.47.2 Field Documentation

6.47.2.1 TIM_AutomaticOutput

`uint16_t TIM_AutomaticOutput`

Specifies whether the TIM Automatic Output feature is enabled or not. This parameter can be a value of TIM_AOE_Bit_Set_Reset

6.47.2.2 TIM_Break

```
uint16_t TIM_Break
```

Specifies whether the TIM Break input is enabled or not. This parameter can be a value of TIM_Break_Input_enable_disable

6.47.2.3 TIM_BreakPolarity

```
uint16_t TIM_BreakPolarity
```

Specifies the TIM Break Input pin polarity. This parameter can be a value of TIM_Break_Polarity

6.47.2.4 TIM_DeadTime

```
uint16_t TIM_DeadTime
```

Specifies the delay time between the switching-off and the switching-on of the outputs. This parameter can be a number between 0x00 and 0xFF

6.47.2.5 TIM_LOCKLevel

```
uint16_t TIM_LOCKLevel
```

Specifies the LOCK level parameters. This parameter can be a value of TIM_Lock_level

6.47.2.6 TIM_OSSIState

```
uint16_t TIM_OSSIState
```

Specifies the Off-State used in Idle state. This parameter can be a value of TIM_OSSI_Off_State_Selection_for_Idle_mode_state

6.47.2.7 TIM_OSSRState

```
uint16_t TIM_OSSRState
```

Specifies the Off-State selection used in Run mode. This parameter can be a value of TIM_OSSR_Off_State_Selection_for_Run_mode

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx_tim.h

6.48 TIM_ICInitTypeDef Struct Reference

TIM Input Capture Init structure definition

```
#include <stm32f4xx_tim.h>
```

Data Fields

- uint16_t TIM_Channel
- uint16_t TIM_ICPolarity
- uint16_t TIM_ICSelection
- uint16_t TIM_ICPrescaler
- uint16_t TIM_ICFilter

6.48.1 Detailed Description

TIM Input Capture Init structure definition

6.48.2 Field Documentation

6.48.2.1 TIM_Channel

```
uint16_t TIM_Channel
```

Specifies the TIM channel. This parameter can be a value of TIM_Channel

6.48.2.2 TIM_ICFilter

```
uint16_t TIM_ICFilter
```

Specifies the input capture filter. This parameter can be a number between 0x0 and 0xF

6.48.2.3 TIM_ICPolarity

```
uint16_t TIM_ICPolarity
```

Specifies the active edge of the input signal. This parameter can be a value of TIM_Input_Capture_Polarity

6.48.2.4 TIM_ICPrescaler

```
uint16_t TIM_ICPrescaler
```

Specifies the Input Capture Prescaler. This parameter can be a value of TIM_Input_Capture_Prescaler

6.48.2.5 TIM_ICSelection

```
uint16_t TIM_ICSelection
```

Specifies the input. This parameter can be a value of TIM_Input_Capture_Selection

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx_tim.h

6.49 TIM_OCInitTypeDef Struct Reference

TIM Output Compare Init structure definition

```
#include <stm32f4xx_tim.h>
```

Data Fields

- uint16_t TIM_OCMode
- uint16_t TIM_OutputState
- uint16_t TIM_OutputNState
- uint32_t TIM_Pulse
- uint16_t TIM_OCPolarity
- uint16_t TIM_OCNPolarity
- uint16_t TIM_OCIdleState
- uint16_t TIM_OCNIdleState

6.49.1 Detailed Description

TIM Output Compare Init structure definition

6.49.2 Field Documentation

6.49.2.1 TIM_OCIdleState

```
uint16_t TIM_OCIdleState
```

Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of TIM_Output_Compare_Idle_State

Note

This parameter is valid only for TIM1 and TIM8.

6.49.2.2 TIM_OCMode

```
uint16_t TIM_OCMode
```

Specifies the TIM mode. This parameter can be a value of TIM_Output_Compare_and_PWM_modes

6.49.2.3 TIM_OCNIdleState

```
uint16_t TIM_OCNIdleState
```

Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of TIM_Output_Compare_N_Idle_State

Note

This parameter is valid only for TIM1 and TIM8.

6.49.2.4 TIM_OCNPolarity

```
uint16_t TIM_OCNPolarity
```

Specifies the complementary output polarity. This parameter can be a value of TIM_Output_Compare_N_Polarity

Note

This parameter is valid only for TIM1 and TIM8.

6.49.2.5 TIM_OCPolarity

```
uint16_t TIM_OCPolarity
```

Specifies the output polarity. This parameter can be a value of TIM_Output_Compare_Polarity

6.49.2.6 TIM_OutputNState

```
uint16_t TIM_OutputNState
```

Specifies the TIM complementary Output Compare state. This parameter can be a value of TIM_Output_Compare_N_State

Note

This parameter is valid only for TIM1 and TIM8.

6.49.2.7 TIM_OutputState

```
uint16_t TIM_OutputState
```

Specifies the TIM Output Compare state. This parameter can be a value of TIM_Output_Compare_State

6.49.2.8 TIM_Pulse

```
uint32_t TIM_Pulse
```

Specifies the pulse value to be loaded into the Capture Compare Register. This parameter can be a number between 0x0000 and 0xFFFF

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx_tim.h

6.50 TIM_TimeBaseInitTypeDef Struct Reference

TIM Time Base Init structure definition

```
#include <stm32f4xx_tim.h>
```

Data Fields

- uint16_t TIM_Prescaler
- uint16_t TIM_CounterMode
- uint32_t TIM_Period
- uint16_t TIM_ClockDivision
- uint8_t TIM_RepetitionCounter

6.50.1 Detailed Description

TIM Time Base Init structure definition

Note

This structure is used with all TIMx except for TIM6 and TIM7.

6.50.2 Field Documentation

6.50.2.1 TIM_ClockDivision

```
uint16_t TIM_ClockDivision
```

Specifies the clock division. This parameter can be a value of TIM_Clock_Division_CKD

6.50.2.2 TIM_CounterMode

```
uint16_t TIM_CounterMode
```

Specifies the counter mode. This parameter can be a value of TIM_Counter_Mode

6.50.2.3 TIM_Period

```
uint32_t TIM_Period
```

Specifies the period value to be loaded into the active Auto-Reload Register at the next update event. This parameter must be a number between 0x0000 and 0xFFFF.

6.50.2.4 TIM_Prescaler

```
uint16_t TIM_Prescaler
```

Specifies the prescaler value used to divide the TIM clock. This parameter can be a number between 0x0000 and 0xFFFF

6.50.2.5 TIM_RepetitionCounter

```
uint8_t TIM_RepetitionCounter
```

Specifies the repetition counter value. Each time the RCR downcounter reaches zero, an update event is generated and counting restarts from the RCR value (N). This means in PWM mode that (N+1) corresponds to:

- the number of PWM periods in edge-aligned mode
- the number of half PWM period in center-aligned mode This parameter must be a number between 0x00 and 0xFF.

  Note

  This parameter is valid only for TIM1 and TIM8.

- uint32_t **dma2_cr_reg**

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32_ub_vga_screen.h

6.55 WWDG_TypeDef Struct Reference

Window WATCHDOG.

```
#include <stm32f4xx.h>
```

Data Fields

- __IO uint32_t CR
- __IO uint32_t CFR
- __IO uint32_t SR

6.55.1 Detailed Description

Window WATCHDOG.

6.55.2 Field Documentation

6.55.2.1 CFR

```
__IO uint32_t CFR
```

WWDG Configuration register, Address offset: 0x04

6.55.2.2 CR

```
__IO uint32_t CR
```

WWDG Control register, Address offset: 0x00

6.55.2.3 SR

```
__IO uint32_t SR
```

WWDG Status register, Address offset: 0x08

The documentation for this struct was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/stm32f4xx.h

6.56 xPSR_Type Union Reference

Union type to access the Special-Purpose Program Status Registers (xPSR).

```
#include <core_cm4.h>
```

Data Fields

- struct {
  uint32_t ISR:9
  uint32_t _reserved0:7
  uint32_t GE:4
  uint32_t _reserved1:4
  uint32_t T:1
  uint32_t IT:2
  uint32_t Q:1
  uint32_t V:1
  uint32_t C:1
  uint32_t Z:1
  uint32_t N:1
  } b
- uint32_t w

6.56.1 Detailed Description

Union type to access the Special-Purpose Program Status Registers (xPSR).

The documentation for this union was generated from the following file:

- CUBE_IDE/VGA/Core/Inc/core_cm4.h

Chapter 7

File Documentation

7.1 CUBE_IDE/VGA/Core/Inc/API_functions.h File Reference

Header file for API functions.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include "stm32_ub_vga_screen.h"
#include "logic_layer.h"
```

Macros

- #define **sgn**(x) ((x<0)?-1:((x>0)?1:0))
- #define **BITMAP_HEIGHT** 77
- #define **BITMAP_WIDTH** 120
- #define **BITMAP_SIZE** 9240

Functions

- int API_draw_line (int x_1, int y_1, int x_2, int y_2, int color, int weight)

  This function gives the user the ability to draw lines on a VGA screen.
- int API_clearscreen (int color)

  This function gives the user the ability to clear the screen to a certain color.
- int API_draw_rectangle (int x, int y, int width, int height, int color, int filled)

  This function gives the user the ability to draw a rectangle on a VGA screen.
- int API_draw_bitmap (int bm_nr, int x_lup, int y_lup)

  This function gives the user the ability to put a bitmap on the VGA screen.

7.1.1 Detailed Description

Header file for API functions.

7.1.2 Function Documentation

7.1.2.1 API_clearscreen()

```
int API_clearscreen (
            int color )
```

This function gives the user the ability to clear the screen to a certain color.

Parameters

color	Color of the screen

Returns

Error code if error occurs

7.1.2.2 API_draw_bitmap()

```
int API_draw_bitmap (
            int bm_nr,
            int x_lup,
            int y_lup )
```

This function gives the user the ability to put a bitmap on the VGA screen.

Parameters

x_lup	X coordinate of x left up
y_lup	Y coordinate of y left up
bm↩ _nr	Number of the bitmap from 1 to 10

Returns

Error code if error or no error occurs

7.1.2.3 API_draw_line()

```
int API_draw_line (
            int x_1,
            int y_1,
            int x_2,
            int y_2,
            int color,
            int weight )
```

This function gives the user the ability to draw lines on a VGA screen.

Parameters

x_1	Starting point coördinate of x
x_2	Ending point coördinate of x
y_1	Starting point coördinate of y
y_2	Ending point coördinate of y
color	Color of the line
weight	Width of the line

Returns

Error code if error or no error occurs

7.1.2.4 API_draw_rectangle()

```
int API_draw_rectangle (
            int x_1,
            int y_1,
            int width,
            int height,
            int color,
            int filled )
```

This function gives the user the ability to draw a rectangle on a VGA screen.

Parameters

x_1	Starting point coördinate of x (upper left)
y_1	Starting point coördinate of y (upper left)
width	Width of the rectangle max. 320
height	Height of the rectangle max. 240
color	Color of the rectangle/borders
filled	1 is filled rectangle 0 is just borders

Returns

Error code if error occurs

```

Data Structures

- union APSR_Type

  Union type to access the Application Program Status Register (APSR).
- union IPSR_Type

  Union type to access the Interrupt Program Status Register (IPSR).
- union xPSR_Type

  Union type to access the Special-Purpose Program Status Registers (xPSR).
- union CONTROL_Type

  Union type to access the Control Registers (CONTROL).
- struct NVIC_Type

  Structure type to access the Nested Vectored Interrupt Controller (NVIC).
- struct SCB_Type

  Structure type to access the System Control Block (SCB).
- struct SCnSCB_Type

  Structure type to access the System Control and ID Register not in the SCB.
- struct SysTick_Type

  Structure type to access the System Timer (SysTick).
- struct ITM_Type

  Structure type to access the Instrumentation Trace Macrocell Register (ITM).
- struct CoreDebug_Type

  Structure type to access the Core Debug Register (CoreDebug).

7.7.1 Detailed Description

CMSIS Cortex-M4 Core Peripheral Access Layer Header File.

Version

V2.10

Date

19. July 2011

Note

ARM Limited (ARM) is supplying this software for use with Cortex-M processor based microcontrollers. This file can be freely distributed within development tools that are supporting such ARM based processors.

7.8 core_cm4.h

Typedefs

- typedef struct PARSE_STORAGE **PARSE**
- typedef struct PARSE_STORAGE * **PPARSE**

Functions

- int parse_cmd (UART data)

  Function that parses the command of the received script.
- int draw_options (char cmd, UART data)

  Function that determines with the command which function should be used, Here the script also get parsed further and decodes ASCII to useful data.
- int number_converter (char ASCII)

  Function that converts ASCII numbers to decimals.
- PARSE color_assign (UART data, int i, PARSE parsing)

  Function that reads received script text and when possible converts this to the correspondiong color.
- PARSE parse_data (PARSE parsing, UART data, int LEN, int var_counter, int num_checker, int let_checker, int num_counter)

  This function is used for parsing data and converts ASCII to decimals.

7.17.1 Detailed Description

This file contains the functions which are used in the source file 'logic_layer.c'.

1.2

7.17.2 Function Documentation

7.17.2.1 color_assign()

```
PARSE color_assign (
            UART data,
            int i,
            PARSE parsing )
```

Function that reads received script text and when possible converts this to the correspondiong color.

Parameters

data	is a struct variable with the received script
i	is the variable for the loop iterator
parsing	is a struct variable that stores all needed data for functions

Returns

parsing is a struct variable with data info which are retrieved from the script

7.17.2.2 draw_options()

```
int draw_options (
            char cmd,
            UART data )
```

Function that determines with the command which function should be used, Here the script also get parsed further and decodes ASCII to useful data.

Here a switch-case is used to determine the received command, Cases 0 to 4 are numbered as followed:

1. lijn
2. rechthoek
3. clearscherm
4. tekst
5. bitmap

Parameters

cmd	is a interger of the found command
data	is a struct variable with the received script

Returns

Error code

7.17.2.3 number_converter()

```
int number_converter (
            char ASCII )
```

Function that converts ASCII numbers to decimals.

Parameters

ASCII	is character of a ASCII number

Returns

decimal number

7.17.2.4 parse_cmd()

```
int parse_cmd (
            UART data )
```

Function that parses the command of the received script.

Parameters

data	is a struct variable with the received script

Returns

Error code or the current index of found

7.17.2.5 parse_data()

```
PARSE parse_data (
            PARSE parsing,
            UART data,
            int LEN,
            int var_counter,
            int num_checker,
```

```
            int let_checker,
            int num_counter )
```

This function is used for parsing data and converts ASCII to decimals.

Parameters

parsing	is a struct variable that stores all needed data for functions
data	is a struct variable with the received script
LEN	is the length of the command + the comma to skip these is the parser
var_counter	is an index of an array to store the data in from the script
num_checker	is a variable to confirm a ASCII number is found and ensures that no junk color values are stored in the data array
let_checker	is a variable to confirm a letter is found and ensures that no junk number values are stored in the data array
num_counter	is a variable which counts the amount of ASCII numbers between two commas

Returns

Error code

Functions

- void NVIC_PriorityGroupConfig (uint32_t NVIC_PriorityGroup)

  Configures the priority grouping: pre-emption priority and subpriority.
- void NVIC_Init (NVIC_InitTypeDef *NVIC_InitStruct)

  Initializes the NVIC peripheral according to the specified parameters in the NVIC_InitStruct.
- void NVIC_SetVectorTable (uint32_t NVIC_VectTab, uint32_t Offset)

  Sets the vector table location and Offset.
- void NVIC_SystemLPConfig (uint8_t LowPowerMode, FunctionalState NewState)

  Selects the condition for the system to enter low power mode.
- void SysTick_CLKSourceConfig (uint32_t SysTick_CLKSource)

  Configures the SysTick clock source.

7.20.1 Detailed Description

This file contains all the functions prototypes for the miscellaneous firmware library functions (add-on to CMSIS functions).

7.23 CUBE_IDE/VGA/Core/Inc/stm32f4xx.h File Reference

CMSIS Cortex-M4 Device Peripheral Access Layer Header File. This file contains all the peripheral register's definitions, bits definitions and memory mapping for STM32F4xx devices.

```
#include "core_cm4.h"
#include "system_stm32f4xx.h"
#include <stdint.h>
```

Data Structures

- struct ADC_TypeDef

  Analog to Digital Converter

- struct ADC_Common_TypeDef

- struct CAN_TxMailBox_TypeDef
  Controller Area Network TxMailBox.
- struct CAN_FIFOMailBox_TypeDef
  Controller Area Network FIFOMailBox.
- struct CAN_FilterRegister_TypeDef
  Controller Area Network FilterRegister.
- struct CAN_TypeDef
  Controller Area Network.
- struct CRC_TypeDef
  CRC calculation unit.
- struct DAC_TypeDef
  Digital to Analog Converter.
- struct DBGMCU_TypeDef
  Debug MCU.
- struct DCMI_TypeDef
  DCMI.
- struct DMA_Stream_TypeDef
  DMA Controller.
- struct DMA_TypeDef
- struct ETH_TypeDef
  Ethernet MAC.
- struct EXTI_TypeDef
  External Interrupt/Event Controller.
- struct FLASH_TypeDef
  FLASH Registers.
- struct FSMC_Bank1_TypeDef
  Flexible Static Memory Controller.
- struct FSMC_Bank1E_TypeDef
  Flexible Static Memory Controller Bank1E.
- struct FSMC_Bank2_TypeDef
  Flexible Static Memory Controller Bank2.
- struct FSMC_Bank3_TypeDef
  Flexible Static Memory Controller Bank3.
- struct FSMC_Bank4_TypeDef
  Flexible Static Memory Controller Bank4.
- struct GPIO_TypeDef
  General Purpose I/O.
- struct SYSCFG_TypeDef
  System configuration controller.
- struct I2C_TypeDef
  Inter-integrated Circuit Interface.
- struct IWDG_TypeDef
  Independent WATCHDOG.
- struct PWR_TypeDef
  Power Control.
- struct RCC_TypeDef
  Reset and Clock Control.
- struct RTC_TypeDef
  Real-Time Clock.
- struct SDIO_TypeDef
  SD host Interface.

- struct SPI_TypeDef

  Serial Peripheral Interface.
- struct TIM_TypeDef

  TIM.
- struct USART_TypeDef

  Universal Synchronous Asynchronous Receiver Transmitter.
- struct WWDG_TypeDef

  Window WATCHDOG.
- struct CRYP_TypeDef

  Crypto Processor.
- struct HASH_TypeDef

  HASH.
- struct RNG_TypeDef

  HASH.

Macros

- #define **STM32F4XX**
- #define HSE_VALUE ((uint32_t)8000000)

  Comment the line below if you will not use the peripherals drivers. In this case, these drivers will not be included and the application code will be based on direct access to peripherals registers.
- #define HSE_STARTUP_TIMEOUT ((uint16_t)0x0500)

  In the following line adjust the External High Speed oscillator (HSE) Startup Timeout value.
- #define HSI_VALUE ((uint32_t)16000000)
- #define __STM32F4XX_STDPERIPH_VERSION_MAIN (0x01)

  STM32F4XX Standard Peripherals Library version number V1.0.0.
- #define __STM32F4XX_STDPERIPH_VERSION_SUB1 (0x00)
- #define __STM32F4XX_STDPERIPH_VERSION_SUB2 (0x00)
- #define __STM32F4XX_STDPERIPH_VERSION_RC (0x00)
- #define __STM32F4XX_STDPERIPH_VERSION
- #define __CM4_REV 0x0001

  Configuration of the Cortex-M4 Processor and Core Peripherals.

7.23.1 Detailed Description

CMSIS Cortex-M4 Device Peripheral Access Layer Header File. This file contains all the peripheral register's definitions, bits definitions and memory mapping for STM32F4xx devices.

Author

MCD Application Team

Version

V1.0.0

Date

30-September-2011

The file is the unique include file that the application programmer is using in the C source code, usually in main.c. This file contains:

- Configuration section that allows to select:
  - The device used in the target application
  - To use or not the peripherals drivers in application code(i.e. code will be based on direct access to peripherals registers rather than drivers API), this option is controlled by "#define USE_STDPERIPH↩ _DRIVER"
  - To change few application-specific parameters such as the HSE crystal frequency
- Data structures and the address mapping for all peripherals
- Peripheral's registers declarations and bits definition
- Macros to access peripherals registers hardware

Attention

7.24 stm32f4xx.h

Functions

- void DMA_DeInit (DMA_Stream_TypeDef *DMAy_Streamx)

  Deinitialize the DMAy Streamx registers to their default reset values.
- void DMA_Init (DMA_Stream_TypeDef *DMAy_Streamx, DMA_InitTypeDef *DMA_InitStruct)

  Initializes the DMAy Streamx according to the specified parameters in the DMA_InitStruct structure.
- void DMA_StructInit (DMA_InitTypeDef *DMA_InitStruct)

  Fills each DMA_InitStruct member with its default value.
- void DMA_Cmd (DMA_Stream_TypeDef *DMAy_Streamx, FunctionalState NewState)

  Enables or disables the specified DMAy Streamx.
- void DMA_PeriphIncOffsetSizeConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_Pincos)

  Configures, when the PINC (Peripheral Increment address mode) bit is set, if the peripheral address should be incremented with the data size (configured with PSIZE bits) or by a fixed offset equal to 4 (32-bit aligned addresses).
- void DMA_FlowControllerConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FlowCtrl)

  Configures, when the DMAy Streamx is disabled, the flow controller for the next transactions (Peripheral or Memory).
- void DMA_SetCurrDataCounter (DMA_Stream_TypeDef *DMAy_Streamx, uint16_t Counter)

  Writes the number of data units to be transferred on the DMAy Streamx.
- uint16_t DMA_GetCurrDataCounter (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the number of remaining data units in the current DMAy Streamx transfer.
- void DMA_DoubleBufferModeConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t Memory1BaseAddr, uint32_t DMA_CurrentMemory)

  Configures, when the DMAy Streamx is disabled, the double buffer mode and the current memory target.
- void DMA_DoubleBufferModeCmd (DMA_Stream_TypeDef *DMAy_Streamx, FunctionalState NewState)

  Enables or disables the double buffer mode for the selected DMA stream.
- void DMA_MemoryTargetConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t MemoryBaseAddr, uint32_t DMA_MemoryTarget)

  Configures the Memory address for the next buffer transfer in double buffer mode (for dynamic use). This function can be called when the DMA Stream is enabled and when the transfer is ongoing.
- uint32_t DMA_GetCurrentMemoryTarget (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the current memory target used by double buffer transfer.
- FunctionalState DMA_GetCmdStatus (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the status of EN bit for the specified DMAy Streamx.
- uint32_t DMA_GetFIFOStatus (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the current DMAy Streamx FIFO filled level.
- FlagStatus DMA_GetFlagStatus (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FLAG)

  Checks whether the specified DMAy Streamx flag is set or not.
- void DMA_ClearFlag (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FLAG)

  Clears the DMAy Streamx's pending flags.
- void DMA_ITConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT, FunctionalState NewState)

  Enables or disables the specified DMAy Streamx interrupts.
- ITStatus DMA_GetITStatus (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT)

  Checks whether the specified DMAy Streamx interrupt has occurred or not.
- void DMA_ClearITPendingBit (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT)

  Clears the DMAy Streamx's interrupt pending bits.

7.26.1 Detailed Description

This file contains all the functions prototypes for the DMA firmware library.

Author

MCD Application Team

Version

V1.0.0

Date

30-September-2011

Enumerations

- enum GPIOMode_TypeDef { GPIO_Mode_IN = 0x00 , GPIO_Mode_OUT = 0x01 , GPIO_Mode_AF = 0x02 , GPIO_Mode_AN = 0x03 }

  GPIO Configuration Mode enumeration.
- enum GPIOOType_TypeDef { **GPIO_OType_PP** = 0x00 , **GPIO_OType_OD** = 0x01 }

  GPIO Output type enumeration.
- enum GPIOSpeed_TypeDef { GPIO_Speed_2MHz = 0x00 , GPIO_Speed_25MHz = 0x01 , GPIO_Speed_50MHz = 0x02 , GPIO_Speed_100MHz = 0x03 }

  GPIO Output Maximum frequency enumeration.
- enum GPIOPuPd_TypeDef { **GPIO_PuPd_NOPULL** = 0x00 , **GPIO_PuPd_UP** = 0x01 , **GPIO_PuPd_DOWN** = 0x02 }

  GPIO Configuration PullUp PullDown enumeration.
- enum BitAction { **Bit_RESET** = 0 , **Bit_SET** }

  GPIO Bit SET and Bit RESET enumeration.

Functions

- void GPIO_DeInit (GPIO_TypeDef *GPIOx)

  Deinitializes the GPIOx peripheral registers to their default reset values.
- void GPIO_Init (GPIO_TypeDef *GPIOx, GPIO_InitTypeDef *GPIO_InitStruct)

  Initializes the GPIOx peripheral according to the specified parameters in the GPIO_InitStruct.
- void GPIO_StructInit (GPIO_InitTypeDef *GPIO_InitStruct)

  Fills each GPIO_InitStruct member with its default value.
- void GPIO_PinLockConfig (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Locks GPIO Pins configuration registers.
- uint8_t GPIO_ReadInputDataBit (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Reads the specified input port pin.
- uint16_t GPIO_ReadInputData (GPIO_TypeDef *GPIOx)

  Reads the specified GPIO input data port.
- uint8_t GPIO_ReadOutputDataBit (GPIO_TypeDef *GPIOx, uint16_t GPIO_Pin)

  Reads the specified output data port bit.
- uint16_t GPIO_ReadOutputData (GPIO_TypeDef *GPIOx)

  Reads the specified GPIO output data port.

- void GPIO_SetBits (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Sets the selected data port bits.
- void GPIO_ResetBits (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Clears the selected data port bits.
- void GPIO_WriteBit (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin, BitAction BitVal)

  Sets or clears the selected data port bit.
- void GPIO_Write (GPIO_TypeDef ∗GPIOx, uint16_t PortVal)

  Writes data to the specified GPIO data port.
- void GPIO_ToggleBits (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Toggles the specified GPIO pins..
- void GPIO_PinAFConfig (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_PinSource, uint8_t GPIO_AF)

  Changes the mapping of the specified pin.

7.28.1 Detailed Description

This file contains all the functions prototypes for the GPIO firmware library.

Author

MCD Application Team

Functions

- void RCC_DeInit (void)

  Resets the RCC clock configuration to the default reset state.
- void RCC_HSEConfig (uint8_t RCC_HSE)

  Configures the External High Speed oscillator (HSE).
- ErrorStatus RCC_WaitForHSEStartUp (void)

  Waits for HSE start-up.
- void RCC_AdjustHSICalibrationValue (uint8_t HSICalibrationValue)

  Adjusts the Internal High Speed oscillator (HSI) calibration value.
- void RCC_HSICmd (FunctionalState NewState)

  Enables or disables the Internal High Speed oscillator (HSI).
- void RCC_LSEConfig (uint8_t RCC_LSE)

  Configures the External Low Speed oscillator (LSE).
- void RCC_LSICmd (FunctionalState NewState)

  Enables or disables the Internal Low Speed oscillator (LSI).
- void RCC_PLLConfig (uint32_t RCC_PLLSource, uint32_t PLLM, uint32_t PLLN, uint32_t PLLP, uint32_t PLLQ)

  Configures the main PLL clock source, multiplication and division factors.
- void RCC_PLLCmd (FunctionalState NewState)

  Enables or disables the main PLL.
- void RCC_PLLI2SConfig (uint32_t PLLI2SN, uint32_t PLLI2SR)

  Configures the PLLI2S clock multiplication and division factors.
- void RCC_PLLI2SCmd (FunctionalState NewState)

  Enables or disables the PLLI2S.
- void RCC_ClockSecuritySystemCmd (FunctionalState NewState)

  Enables or disables the Clock Security System.
- void RCC_MCO1Config (uint32_t RCC_MCO1Source, uint32_t RCC_MCO1Div)

  Selects the clock source to output on MCO1 pin(PA8).
- void RCC_MCO2Config (uint32_t RCC_MCO2Source, uint32_t RCC_MCO2Div)

  Selects the clock source to output on MCO2 pin(PC9).
- void RCC_SYSCLKConfig (uint32_t RCC_SYSCLKSource)

  Configures the system clock (SYSCLK).
- uint8_t RCC_GetSYSCLKSource (void)

  Returns the clock source used as system clock.
- void RCC_HCLKConfig (uint32_t RCC_SYSCLK)

  Configures the AHB clock (HCLK).
- void RCC_PCLK1Config (uint32_t RCC_HCLK)

  Configures the Low Speed APB clock (PCLK1).
- void RCC_PCLK2Config (uint32_t RCC_HCLK)

  Configures the High Speed APB clock (PCLK2).
- void RCC_GetClocksFreq (RCC_ClocksTypeDef *RCC_Clocks)

Returns the frequencies of different on chip clocks; SYSCLK, HCLK, PCLK1 and PCLK2.

- void RCC_RTCCLKConfig (uint32_t RCC_RTCCLKSource)

  Configures the RTC clock (RTCCLK).
- void RCC_RTCCLKCmd (FunctionalState NewState)

  Enables or disables the RTC clock.
- void RCC_BackupResetCmd (FunctionalState NewState)

  Forces or releases the Backup domain reset.
- void RCC_I2SCLKConfig (uint32_t RCC_I2SCLKSource)

  Configures the I2S clock source (I2SCLK).
- void RCC_AHB1PeriphClockCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Enables or disables the AHB1 peripheral clock.
- void RCC_AHB2PeriphClockCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Enables or disables the AHB2 peripheral clock.
- void RCC_AHB3PeriphClockCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Enables or disables the AHB3 peripheral clock.
- void RCC_APB1PeriphClockCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Enables or disables the Low Speed APB (APB1) peripheral clock.
- void RCC_APB2PeriphClockCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Enables or disables the High Speed APB (APB2) peripheral clock.
- void RCC_AHB1PeriphResetCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Forces or releases AHB1 peripheral reset.
- void RCC_AHB2PeriphResetCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Forces or releases AHB2 peripheral reset.
- void RCC_AHB3PeriphResetCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Forces or releases AHB3 peripheral reset.
- void RCC_APB1PeriphResetCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Forces or releases Low Speed APB (APB1) peripheral reset.
- void RCC_APB2PeriphResetCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Forces or releases High Speed APB (APB2) peripheral reset.
- void RCC_AHB1PeriphClockLPModeCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Enables or disables the AHB1 peripheral clock during Low Power (Sleep) mode.
- void RCC_AHB2PeriphClockLPModeCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Enables or disables the AHB2 peripheral clock during Low Power (Sleep) mode.
- void RCC_AHB3PeriphClockLPModeCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Enables or disables the AHB3 peripheral clock during Low Power (Sleep) mode.
- void RCC_APB1PeriphClockLPModeCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Enables or disables the APB1 peripheral clock during Low Power (Sleep) mode.
- void RCC_APB2PeriphClockLPModeCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Enables or disables the APB2 peripheral clock during Low Power (Sleep) mode.
- void RCC_ITConfig (uint8_t RCC_IT, FunctionalState NewState)

  Enables or disables the specified RCC interrupts.
- FlagStatus RCC_GetFlagStatus (uint8_t RCC_FLAG)

  Checks whether the specified RCC flag is set or not.
- void RCC_ClearFlag (void)

  Clears the RCC reset flags. The reset flags are: RCC_FLAG_PINRST, RCC_FLAG_PORRST, RCC_FLAG_SFTRST, RCC_FLAG_IWDGRST, RCC_FLAG_WWDGRST, RCC_FLAG_LPWRRST.
- ITStatus RCC_GetITStatus (uint8_t RCC_IT)

  Checks whether the specified RCC interrupt has occurred or not.
- void RCC_ClearITPendingBit (uint8_t RCC_IT)

  Clears the RCC's interrupt pending bits.

7.30.1 Detailed Description

This file contains all the functions prototypes for the RCC firmware library.

Author

MCD Application Team

Version

V1.0.0

Date

30-September-2011

Attention

7.31 stm32f4xx_rcc.h

7.32 CUBE_IDE/VGA/Core/Inc/stm32f4xx_tim.h File Reference

This file contains all the functions prototypes for the TIM firmware library.

```
#include "stm32f4xx.h"
```

Data Structures

- struct TIM_TimeBaseInitTypeDef

  TIM Time Base Init structure definition

- struct TIM_OCInitTypeDef

  TIM Output Compare Init structure definition

- struct TIM_ICInitTypeDef

  TIM Input Capture Init structure definition

- struct TIM_BDTRInitTypeDef

  BDTR structure definition.

Functions

- void TIM_DeInit (TIM_TypeDef *TIMx)

  Deinitializes the TIMx peripheral registers to their default reset values.
- void TIM_TimeBaseInit (TIM_TypeDef *TIMx, TIM_TimeBaseInitTypeDef *TIM_TimeBaseInitStruct)

  Initializes the TIMx Time Base Unit peripheral according to the specified parameters in the TIM_TimeBaseInitStruct.
- void TIM_TimeBaseStructInit (TIM_TimeBaseInitTypeDef *TIM_TimeBaseInitStruct)

  Fills each TIM_TimeBaseInitStruct member with its default value.
- void TIM_PrescalerConfig (TIM_TypeDef *TIMx, uint16_t Prescaler, uint16_t TIM_PSCReloadMode)

  Configures the TIMx Prescaler.
- void TIM_CounterModeConfig (TIM_TypeDef *TIMx, uint16_t TIM_CounterMode)

  Specifies the TIMx Counter Mode to be used.
- void TIM_SetCounter (TIM_TypeDef *TIMx, uint32_t Counter)

  Sets the TIMx Counter Register value.
- void TIM_SetAutoreload (TIM_TypeDef *TIMx, uint32_t Autoreload)

  Sets the TIMx Autoreload Register value.
- uint32_t TIM_GetCounter (TIM_TypeDef *TIMx)

  Gets the TIMx Counter value.
- uint16_t TIM_GetPrescaler (TIM_TypeDef *TIMx)

  Gets the TIMx Prescaler value.
- void TIM_UpdateDisableConfig (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or Disables the TIMx Update event.
- void TIM_UpdateRequestConfig (TIM_TypeDef *TIMx, uint16_t TIM_UpdateSource)

  Configures the TIMx Update Request Interrupt source.
- void TIM_ARRPreloadConfig (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables TIMx peripheral Preload register on ARR.
- void TIM_SelectOnePulseMode (TIM_TypeDef *TIMx, uint16_t TIM_OPMode)

  Selects the TIMx's One Pulse Mode.
- void TIM_SetClockDivision (TIM_TypeDef *TIMx, uint16_t TIM_CKD)

  Sets the TIMx Clock Division value.
- void TIM_Cmd (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables the specified TIM peripheral.
- void TIM_OC1Init (TIM_TypeDef *TIMx, TIM_OCInitTypeDef *TIM_OCInitStruct)

  Initializes the TIMx Channel1 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC2Init (TIM_TypeDef *TIMx, TIM_OCInitTypeDef *TIM_OCInitStruct)

  Initializes the TIMx Channel2 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC3Init (TIM_TypeDef *TIMx, TIM_OCInitTypeDef *TIM_OCInitStruct)

  Initializes the TIMx Channel3 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC4Init (TIM_TypeDef *TIMx, TIM_OCInitTypeDef *TIM_OCInitStruct)

  Initializes the TIMx Channel4 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OCStructInit (TIM_OCInitTypeDef *TIM_OCInitStruct)

Fills each TIM_OCInitStruct member with its default value.

- void TIM_SelectOCxM (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_OCMode)

  Selects the TIM Output Compare Mode.
- void TIM_SetCompare1 (TIM_TypeDef *TIMx, uint32_t Compare1)

  Sets the TIMx Capture Compare1 Register value.
- void TIM_SetCompare2 (TIM_TypeDef *TIMx, uint32_t Compare2)

  Sets the TIMx Capture Compare2 Register value.
- void TIM_SetCompare3 (TIM_TypeDef *TIMx, uint32_t Compare3)

  Sets the TIMx Capture Compare3 Register value.
- void TIM_SetCompare4 (TIM_TypeDef *TIMx, uint32_t Compare4)

  Sets the TIMx Capture Compare4 Register value.
- void TIM_ForcedOC1Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 1 waveform to active or inactive level.
- void TIM_ForcedOC2Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 2 waveform to active or inactive level.
- void TIM_ForcedOC3Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 3 waveform to active or inactive level.
- void TIM_ForcedOC4Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 4 waveform to active or inactive level.
- void TIM_OC1PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR1.
- void TIM_OC2PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR2.
- void TIM_OC3PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR3.
- void TIM_OC4PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR4.
- void TIM_OC1FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 1 Fast feature.
- void TIM_OC2FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 2 Fast feature.
- void TIM_OC3FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 3 Fast feature.
- void TIM_OC4FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 4 Fast feature.
- void TIM_ClearOC1Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF1 signal on an external event.
- void TIM_ClearOC2Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF2 signal on an external event.
- void TIM_ClearOC3Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF3 signal on an external event.
- void TIM_ClearOC4Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF4 signal on an external event.
- void TIM_OC1PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 1 polarity.
- void TIM_OC1NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 1N polarity.
- void TIM_OC2PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 2 polarity.
- void TIM_OC2NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 2N polarity.

- void TIM_OC3PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 3 polarity.
- void TIM_OC3NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 3N polarity.
- void TIM_OC4PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 4 polarity.
- void TIM_CCxCmd (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_CCx)

  Enables or disables the TIM Capture Compare Channel x.
- void TIM_CCxNCmd (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_CCxN)

  Enables or disables the TIM Capture Compare Channel xN.
- void TIM_ICInit (TIM_TypeDef *TIMx, TIM_ICInitTypeDef *TIM_ICInitStruct)

  Initializes the TIM peripheral according to the specified parameters in the TIM_ICInitStruct.
- void TIM_ICStructInit (TIM_ICInitTypeDef *TIM_ICInitStruct)

  Fills each TIM_ICInitStruct member with its default value.
- void TIM_PWMIConfig (TIM_TypeDef *TIMx, TIM_ICInitTypeDef *TIM_ICInitStruct)

  Configures the TIM peripheral according to the specified parameters in the TIM_ICInitStruct to measure an external PWM signal.
- uint32_t TIM_GetCapture1 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 1 value.
- uint32_t TIM_GetCapture2 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 2 value.
- uint32_t TIM_GetCapture3 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 3 value.
- uint32_t TIM_GetCapture4 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 4 value.
- void TIM_SetIC1Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 1 prescaler.
- void TIM_SetIC2Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 2 prescaler.
- void TIM_SetIC3Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 3 prescaler.
- void TIM_SetIC4Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 4 prescaler.
- void TIM_BDTRConfig (TIM_TypeDef *TIMx, TIM_BDTRInitTypeDef *TIM_BDTRInitStruct)

  Configures the Break feature, dead time, Lock level, OSSI/OSSR State and the AOE(automatic output enable).
- void TIM_BDTRStructInit (TIM_BDTRInitTypeDef *TIM_BDTRInitStruct)

  Fills each TIM_BDTRInitStruct member with its default value.
- void TIM_CtrlPWMOutputs (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables the TIM peripheral Main Outputs.
- void TIM_SelectCOM (TIM_TypeDef *TIMx, FunctionalState NewState)

  Selects the TIM peripheral Commutation event.
- void TIM_CCPreloadControl (TIM_TypeDef *TIMx, FunctionalState NewState)

  Sets or Resets the TIM peripheral Capture Compare Preload Control bit.
- void TIM_ITConfig (TIM_TypeDef *TIMx, uint16_t TIM_IT, FunctionalState NewState)

  Enables or disables the specified TIM interrupts.
- void TIM_GenerateEvent (TIM_TypeDef *TIMx, uint16_t TIM_EventSource)

  Configures the TIMx event to be generate by software.
- FlagStatus TIM_GetFlagStatus (TIM_TypeDef *TIMx, uint16_t TIM_FLAG)

  Checks whether the specified TIM flag is set or not.
- void TIM_ClearFlag (TIM_TypeDef *TIMx, uint16_t TIM_FLAG)

  Clears the TIMx's pending flags.

- ITStatus TIM_GetITStatus (TIM_TypeDef *TIMx, uint16_t TIM_IT)

  Checks whether the TIM interrupt has occurred or not.
- void TIM_ClearITPendingBit (TIM_TypeDef *TIMx, uint16_t TIM_IT)

  Clears the TIMx's interrupt pending bits.
- void TIM_DMAConfig (TIM_TypeDef *TIMx, uint16_t TIM_DMABase, uint16_t TIM_DMABurstLength)

  Configures the TIMx's DMA interface.
- void TIM_DMACmd (TIM_TypeDef *TIMx, uint16_t TIM_DMASource, FunctionalState NewState)

  Enables or disables the TIMx's DMA Requests.
- void TIM_SelectCCDMA (TIM_TypeDef *TIMx, FunctionalState NewState)

  Selects the TIMx peripheral Capture Compare DMA source.
- void TIM_InternalClockConfig (TIM_TypeDef *TIMx)

  Configures the TIMx internal Clock.
- void TIM_ITRxExternalClockConfig (TIM_TypeDef *TIMx, uint16_t TIM_InputTriggerSource)

  Configures the TIMx Internal Trigger as External Clock.
- void TIM_TIxExternalClockConfig (TIM_TypeDef *TIMx, uint16_t TIM_TIxExternalCLKSource, uint16_t TIM_ICPolarity, uint16_t ICFilter)

  Configures the TIMx Trigger as External Clock.
- void TIM_ETRClockMode1Config (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the External clock Mode1.
- void TIM_ETRClockMode2Config (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the External clock Mode2.
- void TIM_SelectInputTrigger (TIM_TypeDef *TIMx, uint16_t TIM_InputTriggerSource)

  Selects the Input Trigger source.
- void TIM_SelectOutputTrigger (TIM_TypeDef *TIMx, uint16_t TIM_TRGOSource)

  Selects the TIMx Trigger Output Mode.
- void TIM_SelectSlaveMode (TIM_TypeDef *TIMx, uint16_t TIM_SlaveMode)

  Selects the TIMx Slave Mode.
- void TIM_SelectMasterSlaveMode (TIM_TypeDef *TIMx, uint16_t TIM_MasterSlaveMode)

  Sets or Resets the TIMx Master/Slave Mode.
- void TIM_ETRConfig (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the TIMx External Trigger (ETR).
- void TIM_EncoderInterfaceConfig (TIM_TypeDef *TIMx, uint16_t TIM_EncoderMode, uint16_t TIM_IC1Polarity, uint16_t TIM_IC2Polarity)

  Configures the TIMx Encoder Interface.
- void TIM_SelectHallSensor (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables the TIMx's Hall sensor interface.
- void TIM_RemapConfig (TIM_TypeDef *TIMx, uint16_t TIM_Remap)

  Configures the TIM2, TIM5 and TIM11 Remapping input capabilities.

7.32.1 Detailed Description

This file contains all the functions prototypes for the TIM firmware library.

Author

MCD Application Team

Version

V1.0.0

Date

30-September-2011

Attention

7.33 stm32f4xx_tim.h

7.34 CUBE_IDE/VGA/Core/Inc/system_stm32f4xx.h File Reference

CMSIS Cortex-M4 Device System Source File for STM32F4xx devices.

Functions

- void SystemInit (void)

  Setup the microcontroller system Initialize the Embedded Flash Interface, the PLL and update the SystemFrequency variable.
- void SystemCoreClockUpdate (void)

  Update SystemCoreClock variable according to Clock Register Values. The SystemCoreClock variable contains the core clock (HCLK), it can be used by the user application to setup the SysTick timer or configure other parameters.

Variables

- uint32_t SystemCoreClock

7.34.1 Detailed Description

CMSIS Cortex-M4 Device System Source File for STM32F4xx devices.

7.36 CUBE_IDE/VGA/Core/Inc/UART_communication.h File Reference

: This file contains the functions which are used in the source file 'UART_communication.c'.

```
#include <stdio.h>
#include <string.h>
#include "main.h"
#include "error.h"
```

Data Structures

- struct UART_Communication

Macros

- #define **WAIT_FOR_DATA** 4000000
- #define **STORAGE** 100
- #define **NO_DATA** 69

Typedefs

- typedef struct UART_Communication **UART**
- typedef struct UART_Communication * **PUART**

Functions

- void UART2_config (void)

  Function to enable all the necessary registers and operations to use UART.
- void UART_sendChar (uint8_t c)

  Function that sends char data to the connected terminal.
- void UART_sendString (char *string)

  Function that sends a string to the connected terminal.
- uint8_t UART_getChar (void)

  Function that receives data from the connected terminal.
- UART UART_receiver (void)

  Function that read a single line and stores the data.
- void UART_errorHandling (int err)

  Function that handles the occuring errors to the terminal.

7.36.1 Detailed Description

: This file contains the functions which are used in the source file 'UART_communication.c'.

7.36.2 Function Documentation

7.36.2.1 UART2_config()

```
void UART2_config (
            void  )
```

Function to enable all the necessary registers and operations to use UART.

Parameters

Nothing	

Returns

Nothing

7.36.2.2 UART_errorHandling()

```
void UART_errorHandling (
            int err )
```

Function that handles the occuring errors to the terminal.

Parameters

err	error that is supposed to be shown

Returns

nothing

7.36.2.3 UART_getChar()

```
uint8_t UART_getChar (
            void  )
```

Function that receives data from the connected terminal.

Parameters

Nothing	

Returns

Received data

7.36.2.4 UART_receiver()

```
UART UART_receiver (
            void  )
```

Function that read a single line and stores the data.

Parameters

Nothing	

Returns

struct variable

7.36.2.5 UART_sendChar()

```
void UART_sendChar (
            uint8_t c )
```

Function that sends char data to the connected terminal.

Parameters

Char	data do be send

Returns

Nothing

7.36.2.6 UART_sendString()

```
void UART_sendString (
            char * string )
```

Function that sends a string to the connected terminal.

Parameters

String	do be send

Returns

Nothing

7.38 CUBE_IDE/VGA/Core/Src/API_functions.c File Reference

All API functions are created in this file.

```
#include "API_functions.h"
#include "bitmap_arrows.h"
#include "bitmap_smileys.h"
```

Functions

- int API_draw_line (int x_1, int y_1, int x_2, int y_2, int color, int weight)

  This function gives the user the ability to draw lines on a VGA screen.
- int API_clearscreen (int color)

  This function gives the user the ability to clear the screen to a certain color.
- int API_draw_rectangle (int x_1, int y_1, int width, int height, int color, int filled)

  This function gives the user the ability to draw a rectangle on a VGA screen.
- int API_draw_bitmap (int bm_nr, int x_lup, int y_lup)

  This function gives the user the ability to put a bitmap on the VGA screen.

7.38.1 Detailed Description

All API functions are created in this file.

Authors

Naomi Born

Version

1.0

7.38.2 Function Documentation

7.38.2.1 API_clearscreen()

```
int API_clearscreen (
            int color )
```

This function gives the user the ability to clear the screen to a certain color.

Parameters

color	Color of the screen

Returns

Error code if error occurs

7.38.2.2 API_draw_bitmap()

```
int API_draw_bitmap (
            int bm_nr,
            int x_lup,
            int y_lup )
```

This function gives the user the ability to put a bitmap on the VGA screen.

Parameters

x_lup	X coordinate of x left up
y_lup	Y coordinate of y left up
bm_nr	Number of the bitmap from 1 to 10

Returns

Error code if error or no error occurs

7.38.2.3 API_draw_line()

```
int API_draw_line (
            int x_1,
            int y_1,
            int x_2,
            int y_2,
            int color,
            int weight )
```

This function gives the user the ability to draw lines on a VGA screen.

Parameters

x_1	Starting point coördinate of x
x_2	Ending point coördinate of x
y_1	Starting point coördinate of y
y_2	Ending point coördinate of y
color	Color of the line
weight	Width of the line

Returns

Error code if error or no error occurs

7.38.2.4 API_draw_rectangle()

```
int API_draw_rectangle (
            int x_1,
            int y_1,
            int width,
            int height,
            int color,
            int filled )
```

This function gives the user the ability to draw a rectangle on a VGA screen.

Parameters

x_1	Starting point coördinate of x (upper left)
y_1	Starting point coördinate of y (upper left)
width	Width of the rectangle max. 320
height	Height of the rectangle max. 240
color	Color of the rectangle/borders
filled	1 is filled rectangle 0 is just borders

Returns

Error code if error occurs

7.39 CUBE_IDE/VGA/Core/Src/logic_layer.c File Reference

Here commands will be processed and executed.

```
#include "logic_layer.h"
```

Functions

- int parse_cmd (UART data)

  Function that parses the command of the received script.
- int draw_options (char cmd, UART data)

  Function that determines with the command which function should be used, Here the script also get parsed further and decodes ASCII to useful data.
- PARSE parse_data (PARSE parsing, UART data, int LEN, int var_counter, int num_checker, int let_checker, int num_counter)

  This function is used for parsing data and converts ASCII to decimals.
- int number_converter (char ASCII)

  Function that converts ASCII numbers to decimals.
- PARSE color_assign (UART data, int i, PARSE parsing)

  Function that reads received script text and when possible converts this to the correspondiong color.

Variables

- char **cmd** [MAX_CMD_LEN] = {0}
- char compare_cmd [4][MAX_CMD_LEN]
- char compare_col [16][MAX_COL_LEN]

7.39.1 Detailed Description

Here commands will be processed and executed.

Authors

Skip Wijtman

Date

24-5-2023

Version

1.2

7.39.2 Function Documentation

7.39.2.1 color_assign()

```
PARSE color_assign (
            UART data,
            int i,
            PARSE parsing )
```

Function that reads received script text and when possible converts this to the correspondiong color.

Parameters

data	is a struct variable with the received script
i	is the variable for the loop iterator
parsing	is a struct variable that stores all needed data for functions

Returns

parsing is a struct variable with data info which are retrieved from the script

7.39.2.2 draw_options()

```
int draw_options (
            char cmd,
            UART data )
```

Function that determines with the command which function should be used, Here the script also get parsed further and decodes ASCII to useful data.

Here a switch-case is used to determine the received command, Cases 0 to 4 are numbered as followed:

1. lijn
2. rechthoek
3. clearscherm
4. tekst
5. bitmap

Parameters

cmd	is a interger of the found command
data	is a struct variable with the received script

Returns

Error code

7.39.2.3 number_converter()

```
int number_converter (
            char ASCII )
```

Function that converts ASCII numbers to decimals.

Parameters

ASCII	is character of a ASCII number

Returns

decimal number

7.39.2.4 parse_cmd()

```
int parse_cmd (
            UART data )
```

Function that parses the command of the received script.

Parameters

data	is a struct variable with the received script

Returns

Error code or the current index of found

7.39.2.5 parse_data()

```
PARSE parse_data (
            PARSE parsing,
            UART data,
            int LEN,
            int var_counter,
            int num_checker,
```

```
            int let_checker,
            int num_counter )
```

This function is used for parsing data and converts ASCII to decimals.

Parameters

parsing	is a struct variable that stores all needed data for functions
data	is a struct variable with the received script
LEN	is the length of the command + the comma to skip these is the parser
var_counter	is an index of an array to store the data in from the script
num_checker	is a variable to confirm a ASCII number is found and ensures that no junk color values are stored in the data array
let_checker	is a variable to confirm a letter is found and ensures that no junk number values are stored in the data array
num_counter	is a variable which counts the amount of ASCII numbers between two commas

Returns

Error code

7.39.3 Variable Documentation

7.39.3.1 compare_cmd

```
char compare_cmd[4][MAX_CMD_LEN]
```

Initial value:

```
= { {"lijn"},
                                        {"rechthoek"},
                                        {"clearscherm"},
                                        {"bitmap"}}
```

7.39.3.2 compare_col

```
char compare_col[16][MAX_COL_LEN]
```

Initial value:

```
= { {"zwart"},
                                        {"blauw"},
                                        {"lichtblauw"},
                                        {"groen"},
                                        {"lichtgroen"},
                                        {"cyaan"},
                                        {"lichtcyaan"},
                                        {"rood"},
                                        {"lichtrood"},
                                        {"magenta"},
                                        {"lichtmagenta"},
                                        {"bruin"},
                                        {"geel"},
                                        {"grijs"},
                                        {"roze"},
                                        {"wit"}}
```

7.40 CUBE_IDE/VGA/Core/Src/main.c File Reference

The file that gets executed and is used for operating a screen via VGA with external functions.

```
#include <math.h>
#include "main.h"
#include "stm32_ub_vga_screen.h"
#include "UART_communication.h"
#include "API_functions.h"
#include "logic_layer.h"
#include "error.h"
```

Functions

- int main (void)

  Program start.

Variables

- uint8_t **data**
- char **save** [100]
- char **save2** [100]
- uint8_t **arr** [100]
- uint8_t **i** =0
- int **x** = 0
- unsigned char **j**
- int **val** = 0

7.40.1 Detailed Description

The file that gets executed and is used for operating a screen via VGA with external functions.

Extra infromation:

1. CPU : STM32F4
2. IDE : CooCox CoIDE 1.7.x
3. Module : CMSIS_BOOT, M4_CMSIS_CORE
4. Function : VGA_core DMA LIB 320x240, 8bit color

1.0 (Updates with every SWD branch)

7.40.2 Function Documentation

7.40.2.1 main()

```
int main (
            void  )
```

Program start.

Parameters

Nothing	

Returns

integer val

7.41 CUBE_IDE/VGA/Core/Src/misc.c File Reference

This file provides all the miscellaneous firmware functions (add-on to CMSIS functions).

```
#include "misc.h"
#include "stm32f4xx_conf.h"
```

Macros

- #define **AIRCR_VECTKEY_MASK** ((uint32_t)0x05FA0000)

Functions

- void NVIC_PriorityGroupConfig (uint32_t NVIC_PriorityGroup)

  Configures the priority grouping: pre-emption priority and subpriority.
- void NVIC_Init (NVIC_InitTypeDef *NVIC_InitStruct)

  Initializes the NVIC peripheral according to the specified parameters in the NVIC_InitStruct.
- void NVIC_SetVectorTable (uint32_t NVIC_VectTab, uint32_t Offset)

  Sets the vector table location and Offset.
- void NVIC_SystemLPConfig (uint8_t LowPowerMode, FunctionalState NewState)

  Selects the condition for the system to enter low power mode.
- void SysTick_CLKSourceConfig (uint32_t SysTick_CLKSource)

  Configures the SysTick clock source.

7.41.1 Detailed Description

This file provides all the miscellaneous firmware functions (add-on to CMSIS functions).

*
*          ===================================================================
*                        How to configure Interrupts using driver
*          ===================================================================
*
*            This section provide functions allowing to configure the NVIC interrupts (IRQ).
*            The Cortex-M4 exceptions are managed by CMSIS functions.
*
*            1. Configure the NVIC Priority Grouping using NVIC_PriorityGroupConfig()
*                function according to the following table.

*  The table below gives the allowed values of the pre-emption priority and subpriority according
*  to the Priority Grouping configuration performed by NVIC_PriorityGroupConfig function
*    ========================================================================================================
*      NVIC_PriorityGroup   | NVIC_IRQChannelPreemptionPriority | NVIC_IRQChannelSubPriority  |       Descript
*    ========================================================================================================
*     NVIC_PriorityGroup_0  |                0                 |            0-15             | 0 bits for pre
*                           |                                  |                             | 4 bits for sub
*    --------------------------------------------------------------------------------------------------------
*     NVIC_PriorityGroup_1  |                0-1               |            0-7              | 1 bits for pre
*                           |                                  |                             | 3 bits for sub
*    --------------------------------------------------------------------------------------------------------
*     NVIC_PriorityGroup_2  |                0-3               |            0-3              | 2 bits for pre
*                           |                                  |                             | 2 bits for sub
*    --------------------------------------------------------------------------------------------------------
*     NVIC_PriorityGroup_3  |                0-7               |            0-1              | 3 bits for pre
*                           |                                  |                             | 1 bits for sub
*    --------------------------------------------------------------------------------------------------------
*     NVIC_PriorityGroup_4  |                0-15              |            0                | 4 bits for pre
*                           |                                  |                             | 0 bits for sub
*    ========================================================================================================
*
*            2. Enable and Configure the priority of the selected IRQ Channels using NVIC_Init()
*
* @note  When the NVIC_PriorityGroup_0 is selected, IRQ pre-emption is no more possible.
*        The pending IRQ priority will be managed only by the subpriority.
*
* @note  IRQ priority order (sorted by highest to lowest priority):
*         - Lowest pre-emption priority
*         - Lowest subpriority
*         - Lowest hardware priority (IRQ number)
*
*
```

Attention

THE PRESENT FIRMWARE WHICH IS FOR GUIDANCE ONLY AIMS AT PROVIDING CUSTOMERS WITH CODING INFORMATION REGARDING THEIR PRODUCTS IN ORDER FOR THEM TO SAVE TIME. AS A RESULT, STMICROELECTRONICS SHALL NOT BE HELD LIABLE FOR ANY DIRECT, INDIRECT OR CONSEQUENTIAL DAMAGES WITH RESPECT TO ANY CLAIMS ARISING FROM THE CONTENT OF SUCH FIRMWARE AND/OR THE USE MADE BY CUSTOMERS OF THE CODING INFORMATION CONTAINED HEREIN IN CONNECTION WITH THEIR PRODUCTS.

7.42 CUBE_IDE/VGA/Core/Src/stm32f4xx_dma.c File Reference

This file provides firmware functions to manage the following functionalities of the Direct Memory Access controller (DMA):

```
#include "stm32f4xx_dma.h"
#include "stm32f4xx_rcc.h"
#include "stm32f4xx_conf.h"
```

Macros

- #define TRANSFER_IT_ENABLE_MASK
- #define DMA_Stream0_IT_MASK
- #define **DMA_Stream1_IT_MASK** (uint32_t)(DMA_Stream0_IT_MASK << 6)
- #define **DMA_Stream2_IT_MASK** (uint32_t)(DMA_Stream0_IT_MASK << 16)
- #define **DMA_Stream3_IT_MASK** (uint32_t)(DMA_Stream0_IT_MASK << 22)
- #define **DMA_Stream4_IT_MASK** (uint32_t)(DMA_Stream0_IT_MASK | (uint32_t)0x20000000)

- #define **DMA_Stream6_IT_MASK** (uint32_t)(DMA_Stream2_IT_MASK | (uint32_t)0x20000000)
- #define **DMA_Stream7_IT_MASK** (uint32_t)(DMA_Stream3_IT_MASK | (uint32_t)0x20000000)
- #define **TRANSFER_IT_MASK** (uint32_t)0x0F3C0F3C
- #define **HIGH_ISR_MASK** (uint32_t)0x20000000
- #define **RESERVED_MASK** (uint32_t)0x0F7D0F7D

Functions

- void DMA_DeInit (DMA_Stream_TypeDef *DMAy_Streamx)

  Deinitialize the DMAy Streamx registers to their default reset values.
- void DMA_Init (DMA_Stream_TypeDef *DMAy_Streamx, DMA_InitTypeDef *DMA_InitStruct)

  Initializes the DMAy Streamx according to the specified parameters in the DMA_InitStruct structure.
- void DMA_StructInit (DMA_InitTypeDef *DMA_InitStruct)

  Fills each DMA_InitStruct member with its default value.
- void DMA_Cmd (DMA_Stream_TypeDef *DMAy_Streamx, FunctionalState NewState)

  Enables or disables the specified DMAy Streamx.
- void DMA_PeriphIncOffsetSizeConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_Pincos)

  Configures, when the PINC (Peripheral Increment address mode) bit is set, if the peripheral address should be incremented with the data size (configured with PSIZE bits) or by a fixed offset equal to 4 (32-bit aligned addresses).
- void DMA_FlowControllerConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FlowCtrl)

  Configures, when the DMAy Streamx is disabled, the flow controller for the next transactions (Peripheral or Memory).
- void DMA_SetCurrDataCounter (DMA_Stream_TypeDef *DMAy_Streamx, uint16_t Counter)

  Writes the number of data units to be transferred on the DMAy Streamx.
- uint16_t DMA_GetCurrDataCounter (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the number of remaining data units in the current DMAy Streamx transfer.
- void DMA_DoubleBufferModeConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t Memory1BaseAddr, uint32_t DMA_CurrentMemory)

  Configures, when the DMAy Streamx is disabled, the double buffer mode and the current memory target.
- void DMA_DoubleBufferModeCmd (DMA_Stream_TypeDef *DMAy_Streamx, FunctionalState NewState)

  Enables or disables the double buffer mode for the selected DMA stream.
- void DMA_MemoryTargetConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t MemoryBaseAddr, uint32_t DMA_MemoryTarget)

  Configures the Memory address for the next buffer transfer in double buffer mode (for dynamic use). This function can be called when the DMA Stream is enabled and when the transfer is ongoing.
- uint32_t DMA_GetCurrentMemoryTarget (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the current memory target used by double buffer transfer.
- FunctionalState DMA_GetCmdStatus (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the status of EN bit for the specified DMAy Streamx.
- uint32_t DMA_GetFIFOStatus (DMA_Stream_TypeDef *DMAy_Streamx)

  Returns the current DMAy Streamx FIFO filled level.
- FlagStatus DMA_GetFlagStatus (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FLAG)

  Checks whether the specified DMAy Streamx flag is set or not.
- void DMA_ClearFlag (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_FLAG)

  Clears the DMAy Streamx's pending flags.
- void DMA_ITConfig (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT, FunctionalState NewState)

  Enables or disables the specified DMAy Streamx interrupts.
- ITStatus DMA_GetITStatus (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT)

  Checks whether the specified DMAy Streamx interrupt has occurred or not.
- void DMA_ClearITPendingBit (DMA_Stream_TypeDef *DMAy_Streamx, uint32_t DMA_IT)

  Clears the DMAy Streamx's interrupt pending bits.

7.42.1 Detailed Description

- Initialization and Configuration
- Data Counter
- Double Buffer mode configuration and command
- Interrupts and flags management

```
*
*          ===================================================================
*                              How to use this driver
*          ===================================================================
*          1. Enable The DMA controller clock using RCC_AHB1PeriphResetCmd(RCC_AHB1Periph_DMA1, ENABLE)
*             function for DMA1 or using RCC_AHB1PeriphResetCmd(RCC_AHB1Periph_DMA2, ENABLE)
*             function for DMA2.
*
*          2. Enable and configure the peripheral to be connected to the DMA Stream
*             (except for internal SRAM / FLASH memories: no initialization is
*             necessary).
*
*          3. For a given Stream, program the required configuration through following parameters:
*             Source and Destination addresses, Transfer Direction, Transfer size, Source and Destination
*             data formats, Circular or Normal mode, Stream Priority level, Source and Destination
*             Incrementation mode, FIFO mode and its Threshold (if needed), Burst mode for Source and/or
*             Destination (if needed) using the DMA_Init() function.
*             To avoid filling un-nesecessary fields, you can call DMA_StructInit() function
*             to initialize a given structure with default values (reset values), the modify
*             only necessary fields (ie. Source and Destination addresses, Transfer size and Data Formats).
*
*          4. Enable the NVIC and the corresponding interrupt(s) using the function
*             DMA_ITConfig() if you need to use DMA interrupts.
*
*          5. Optionally, if the Circular mode is enabled, you can use the Double buffer mode by configuring
*             the second Memory address and the first Memory to be used through the function
*             DMA_DoubleBufferModeConfig(). Then enable the Double buffer mode through the function
*             DMA_DoubleBufferModeCmd(). These operations must be done before step 6.
*
*          6. Enable the DMA stream using the DMA_Cmd() function.
*
*          7. Activate the needed Stream Request using PPP_DMACmd() function for
*             any PPP peripheral except internal SRAM and FLASH (ie. SPI, USART ...)
*             The function allowing this operation is provided in each PPP peripheral
*             driver (ie. SPI_DMACmd for SPI peripheral).
*             Once the Stream is enabled, it is not possible to modify its configuration
*             unless the stream is stopped and disabled.
*             After enabling the Stream, it is advised to monitor the EN bit status using
*             the function DMA_GetCmdStatus(). In case of configuration errors or bus errors
*             this bit will remain reset and all transfers on this Stream will remain on hold.
```

```
*
*          8. Optionally, you can configure the number of data to be transferred
*             when the Stream is disabled (ie. after each Transfer Complete event
*             or when a Transfer Error occurs) using the function DMA_SetCurrDataCounter().
*             And you can get the number of remaining data to be transferred using
*             the function DMA_GetCurrDataCounter() at run time (when the DMA Stream is
*             enabled and running).
*
*          9. To control DMA events you can use one of the following
*              two methods:
*               a- Check on DMA Stream flags using the function DMA_GetFlagStatus().
*               b- Use DMA interrupts through the function DMA_ITConfig() at initialization
*                  phase and DMA_GetITStatus() function into interrupt routines in
*                  communication phase.
*             After checking on a flag you should clear it using DMA_ClearFlag()
*             function. And after checking on an interrupt event you should
*             clear it using DMA_ClearITPendingBit() function.
*
*          10. Optionally, if Circular mode and Double Buffer mode are enabled, you can modify
*              the Memory Addresses using the function DMA_MemoryTargetConfig(). Make sure that
*              the Memory Address to be modified is not the one currently in use by DMA Stream.
*              This condition can be monitored using the function DMA_GetCurrentMemoryTarget().
*
*          11. Optionally, Pause-Resume operations may be performed:
*              The DMA_Cmd() function may be used to perform Pause-Resume operation. When a
*              transfer is ongoing, calling this function to disable the Stream will cause the
*              transfer to be paused. All configuration registers and the number of remaining
*              data will be preserved. When calling again this function to re-enable the Stream,
*              the transfer will be resumed from the point where it was paused.
*
* @note   Memory-to-Memory transfer is possible by setting the address of the memory into
*         the Peripheral registers. In this mode, Circular mode and Double Buffer mode
*         are not allowed.
*
* @note   The FIFO is used mainly to reduce bus usage and to allow data packing/unpacking: it is
*         possible to set different Data Sizes for the Peripheral and the Memory (ie. you can set
*         Half-Word data size for the peripheral to access its data register and set Word data size
*         for the Memory to gain in access time. Each two Half-words will be packed and written in
*         a single access to a Word in the Memory).
*
* @note  When FIFO is disabled, it is not allowed to configure different Data Sizes for Source
*        and Destination. In this case the Peripheral Data Size will be applied to both Source
*        and Destination.
*
*
```

Attention

7.43 CUBE_IDE/VGA/Core/Src/stm32f4xx_gpio.c File Reference

This file provides firmware functions to manage the following functionalities of the GPIO peripheral:

```
#include "stm32f4xx_gpio.h"
#include "stm32f4xx_rcc.h"
#include "stm32f4xx_conf.h"
```

Functions

- void GPIO_DeInit (GPIO_TypeDef ∗GPIOx)

  Deinitializes the GPIOx peripheral registers to their default reset values.
- void GPIO_Init (GPIO_TypeDef ∗GPIOx, GPIO_InitTypeDef ∗GPIO_InitStruct)

  Initializes the GPIOx peripheral according to the specified parameters in the GPIO_InitStruct.
- void GPIO_StructInit (GPIO_InitTypeDef ∗GPIO_InitStruct)

  Fills each GPIO_InitStruct member with its default value.
- void GPIO_PinLockConfig (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Locks GPIO Pins configuration registers.
- uint8_t GPIO_ReadInputDataBit (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Reads the specified input port pin.
- uint16_t GPIO_ReadInputData (GPIO_TypeDef ∗GPIOx)

  Reads the specified GPIO input data port.
- uint8_t GPIO_ReadOutputDataBit (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Reads the specified output data port bit.
- uint16_t GPIO_ReadOutputData (GPIO_TypeDef ∗GPIOx)

  Reads the specified GPIO output data port.
- void GPIO_SetBits (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Sets the selected data port bits.
- void GPIO_ResetBits (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Clears the selected data port bits.
- void GPIO_WriteBit (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin, BitAction BitVal)

  Sets or clears the selected data port bit.
- void GPIO_Write (GPIO_TypeDef ∗GPIOx, uint16_t PortVal)

  Writes data to the specified GPIO data port.
- void GPIO_ToggleBits (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_Pin)

  Toggles the specified GPIO pins..
- void GPIO_PinAFConfig (GPIO_TypeDef ∗GPIOx, uint16_t GPIO_PinSource, uint8_t GPIO_AF)

  Changes the mapping of the specified pin.

7.43.1 Detailed Description

This file provides firmware functions to manage the following functionalities of the GPIO peripheral:

Author

Version

V1.0.0

Date

30-September-2011

- Initialization and Configuration
- GPIO Read and Write
- GPIO Alternate functions configuration

```
*
*          ===================================================================
*                              How to use this driver
*          ===================================================================
*           1. Enable the GPIO AHB clock using the following function
*                RCC_AHB1PeriphClockCmd(RCC_AHB1Periph_GPIOx, ENABLE);
*
*           2. Configure the GPIO pin(s) using GPIO_Init()
*              Four possible configuration are available for each pin:
*                - Input: Floating, Pull-up, Pull-down.
*                - Output: Push-Pull (Pull-up, Pull-down or no Pull)
*                          Open Drain (Pull-up, Pull-down or no Pull).
*                  In output mode, the speed is configurable: 2 MHz, 25 MHz,
*                  50 MHz or 100 MHz.
*                - Alternate Function: Push-Pull (Pull-up, Pull-down or no Pull)
*                                      Open Drain (Pull-up, Pull-down or no Pull).
*                - Analog: required mode when a pin is to be used as ADC channel
*                          or DAC output.
*
*          3- Peripherals alternate function:
*              - For ADC and DAC, configure the desired pin in analog mode using
*                 GPIO_InitStruct->GPIO_Mode = GPIO_Mode_AN;
*              - For other peripherals (TIM, USART...):
*                 - Connect the pin to the desired peripherals' Alternate
*                   Function (AF) using GPIO_PinAFConfig() function
*                 - Configure the desired pin in alternate function mode using
*                   GPIO_InitStruct->GPIO_Mode = GPIO_Mode_AF
*                 - Select the type, pull-up/pull-down and output speed via
*                   GPIO_PuPd, GPIO_OType and GPIO_Speed members
*                 - Call GPIO_Init() function
*
*          4. To get the level of a pin configured in input mode use GPIO_ReadInputDataBit()
*
*          5. To set/reset the level of a pin configured in output mode use
*             GPIO_SetBits()/GPIO_ResetBits()
*
*          6. During and just after reset, the alternate functions are not
*             active and the GPIO pins are configured in input floating mode
*             (except JTAG pins).
*
*          7. The LSE oscillator pins OSC32_IN and OSC32_OUT can be used as
*             general-purpose (PC14 and PC15, respectively) when the LSE
*             oscillator is off. The LSE has priority over the GPIO function.
*
*          8. The HSE oscillator pins OSC_IN/OSC_OUT can be used as
*             general-purpose PH0 and PH1, respectively, when the HSE
*             oscillator is off. The HSE has priority over the GPIO function.
*
*
```

- #define **BDCR_ADDRESS** (PERIPH_BASE + BDCR_OFFSET)

Functions

- void RCC_DeInit (void)

  Resets the RCC clock configuration to the default reset state.
- void RCC_HSEConfig (uint8_t RCC_HSE)

  Configures the External High Speed oscillator (HSE).
- ErrorStatus RCC_WaitForHSEStartUp (void)

  Waits for HSE start-up.
- void RCC_AdjustHSICalibrationValue (uint8_t HSICalibrationValue)

  Adjusts the Internal High Speed oscillator (HSI) calibration value.
- void RCC_HSICmd (FunctionalState NewState)

  Enables or disables the Internal High Speed oscillator (HSI).
- void RCC_LSEConfig (uint8_t RCC_LSE)

  Configures the External Low Speed oscillator (LSE).
- void RCC_LSICmd (FunctionalState NewState)

  Enables or disables the Internal Low Speed oscillator (LSI).
- void RCC_PLLConfig (uint32_t RCC_PLLSource, uint32_t PLLM, uint32_t PLLN, uint32_t PLLP, uint32_t PLLQ)

  Configures the main PLL clock source, multiplication and division factors.
- void RCC_PLLCmd (FunctionalState NewState)

  Enables or disables the main PLL.
- void RCC_PLLI2SConfig (uint32_t PLLI2SN, uint32_t PLLI2SR)

  Configures the PLLI2S clock multiplication and division factors.
- void RCC_PLLI2SCmd (FunctionalState NewState)

  Enables or disables the PLLI2S.
- void RCC_ClockSecuritySystemCmd (FunctionalState NewState)

  Enables or disables the Clock Security System.
- void RCC_MCO1Config (uint32_t RCC_MCO1Source, uint32_t RCC_MCO1Div)

  Selects the clock source to output on MCO1 pin(PA8).
- void RCC_MCO2Config (uint32_t RCC_MCO2Source, uint32_t RCC_MCO2Div)

  Selects the clock source to output on MCO2 pin(PC9).
- void RCC_SYSCLKConfig (uint32_t RCC_SYSCLKSource)

  Configures the system clock (SYSCLK).
- uint8_t RCC_GetSYSCLKSource (void)

  Returns the clock source used as system clock.
- void RCC_HCLKConfig (uint32_t RCC_SYSCLK)

  Configures the AHB clock (HCLK).
- void RCC_PCLK1Config (uint32_t RCC_HCLK)

  Configures the Low Speed APB clock (PCLK1).
- void RCC_PCLK2Config (uint32_t RCC_HCLK)

  Configures the High Speed APB clock (PCLK2).
- void RCC_GetClocksFreq (RCC_ClocksTypeDef *RCC_Clocks)

  Returns the frequencies of different on chip clocks; SYSCLK, HCLK, PCLK1 and PCLK2.
- void RCC_RTCCLKConfig (uint32_t RCC_RTCCLKSource)

  Configures the RTC clock (RTCCLK).
- void RCC_RTCCLKCmd (FunctionalState NewState)

  Enables or disables the RTC clock.
- void RCC_BackupResetCmd (FunctionalState NewState)

  Forces or releases the Backup domain reset.
- void RCC_I2SCLKConfig (uint32_t RCC_I2SCLKSource)

Configures the I2S clock source (I2SCLK).

- void RCC_AHB1PeriphClockCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Enables or disables the AHB1 peripheral clock.
- void RCC_AHB2PeriphClockCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Enables or disables the AHB2 peripheral clock.
- void RCC_AHB3PeriphClockCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Enables or disables the AHB3 peripheral clock.
- void RCC_APB1PeriphClockCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Enables or disables the Low Speed APB (APB1) peripheral clock.
- void RCC_APB2PeriphClockCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Enables or disables the High Speed APB (APB2) peripheral clock.
- void RCC_AHB1PeriphResetCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Forces or releases AHB1 peripheral reset.
- void RCC_AHB2PeriphResetCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Forces or releases AHB2 peripheral reset.
- void RCC_AHB3PeriphResetCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Forces or releases AHB3 peripheral reset.
- void RCC_APB1PeriphResetCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Forces or releases Low Speed APB (APB1) peripheral reset.
- void RCC_APB2PeriphResetCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Forces or releases High Speed APB (APB2) peripheral reset.
- void RCC_AHB1PeriphClockLPModeCmd (uint32_t RCC_AHB1Periph, FunctionalState NewState)

  Enables or disables the AHB1 peripheral clock during Low Power (Sleep) mode.
- void RCC_AHB2PeriphClockLPModeCmd (uint32_t RCC_AHB2Periph, FunctionalState NewState)

  Enables or disables the AHB2 peripheral clock during Low Power (Sleep) mode.
- void RCC_AHB3PeriphClockLPModeCmd (uint32_t RCC_AHB3Periph, FunctionalState NewState)

  Enables or disables the AHB3 peripheral clock during Low Power (Sleep) mode.
- void RCC_APB1PeriphClockLPModeCmd (uint32_t RCC_APB1Periph, FunctionalState NewState)

  Enables or disables the APB1 peripheral clock during Low Power (Sleep) mode.
- void RCC_APB2PeriphClockLPModeCmd (uint32_t RCC_APB2Periph, FunctionalState NewState)

  Enables or disables the APB2 peripheral clock during Low Power (Sleep) mode.
- void RCC_ITConfig (uint8_t RCC_IT, FunctionalState NewState)

  Enables or disables the specified RCC interrupts.
- FlagStatus RCC_GetFlagStatus (uint8_t RCC_FLAG)

  Checks whether the specified RCC flag is set or not.
- void RCC_ClearFlag (void)

  Clears the RCC reset flags. The reset flags are: RCC_FLAG_PINRST, RCC_FLAG_PORRST, RCC_FLAG_SFTRST, RCC_FLAG_IWDGRST, RCC_FLAG_WWDGRST, RCC_FLAG_LPWRRST.
- ITStatus RCC_GetITStatus (uint8_t RCC_IT)

  Checks whether the specified RCC interrupt has occurred or not.
- void RCC_ClearITPendingBit (uint8_t RCC_IT)

  Clears the RCC's interrupt pending bits.

7.44.1 Detailed Description

This file provides firmware functions to manage the following functionalities of the Reset and clock control (RCC) peripheral:

Author

MCD Application Team

Version

V1.0.0

Date

30-September-2011

- Internal/external clocks, PLL, CSS and MCO configuration
- System, AHB and APB busses clocks configuration
- Peripheral clocks configuration
- Interrupts and flags management

```
*
*          ===================================================================
*                              RCC specific features
*          ===================================================================
*
*          After reset the device is running from Internal High Speed oscillator
*          (HSI 16MHz) with Flash 0 wait state, Flash prefetch buffer, D-Cache
*          and I-Cache are disabled, and all peripherals are off except internal
*          SRAM, Flash and JTAG.
*           - There is no prescaler on High speed (AHB) and Low speed (APB) busses;
*             all peripherals mapped on these busses are running at HSI speed.
*             - The clock for all peripherals is switched off, except the SRAM and FLASH.
*           - All GPIOs are in input floating state, except the JTAG pins which
*             are assigned to be used for debug purpose.
*
*          Once the device started from reset, the user application has to:
*           - Configure the clock source to be used to drive the System clock
*             (if the application needs higher frequency/performance)
*           - Configure the System clock frequency and Flash settings
*           - Configure the AHB and APB busses prescalers
*           - Enable the clock for the peripheral(s) to be used
*           - Configure the clock source(s) for peripherals which clocks are not
*             derived from the System clock (I2S, RTC, ADC, USB OTG FS/SDIO/RNG)
*
*
```

Attention

7.45 CUBE_IDE/VGA/Core/Src/stm32f4xx_tim.c File Reference

This file provides firmware functions to manage the following functionalities of the TIM peripheral:

```
#include "stm32f4xx_tim.h"
#include "stm32f4xx_rcc.h"
#include "stm32f4xx_conf.h"
```

Macros

- #define **SMCR_ETR_MASK** ((uint16_t)0x00FF)
- #define **CCMR_OFFSET** ((uint16_t)0x0018)
- #define **CCER_CCE_SET** ((uint16_t)0x0001)
- #define **CCER_CCNE_SET** ((uint16_t)0x0004)
- #define **CCMR_OC13M_MASK** ((uint16_t)0xFF8F)
- #define **CCMR_OC24M_MASK** ((uint16_t)0x8FFF)

Functions

- void TIM_DeInit (TIM_TypeDef ∗TIMx)

  Deinitializes the TIMx peripheral registers to their default reset values.
- void TIM_TimeBaseInit (TIM_TypeDef ∗TIMx, TIM_TimeBaseInitTypeDef ∗TIM_TimeBaseInitStruct)

  Initializes the TIMx Time Base Unit peripheral according to the specified parameters in the TIM_TimeBaseInitStruct.
- void TIM_TimeBaseStructInit (TIM_TimeBaseInitTypeDef ∗TIM_TimeBaseInitStruct)

  Fills each TIM_TimeBaseInitStruct member with its default value.
- void TIM_PrescalerConfig (TIM_TypeDef ∗TIMx, uint16_t Prescaler, uint16_t TIM_PSCReloadMode)

  Configures the TIMx Prescaler.
- void TIM_CounterModeConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_CounterMode)

  Specifies the TIMx Counter Mode to be used.
- void TIM_SetCounter (TIM_TypeDef ∗TIMx, uint32_t Counter)

  Sets the TIMx Counter Register value.
- void TIM_SetAutoreload (TIM_TypeDef ∗TIMx, uint32_t Autoreload)

  Sets the TIMx Autoreload Register value.
- uint32_t TIM_GetCounter (TIM_TypeDef ∗TIMx)

  Gets the TIMx Counter value.
- uint16_t TIM_GetPrescaler (TIM_TypeDef ∗TIMx)

  Gets the TIMx Prescaler value.
- void TIM_UpdateDisableConfig (TIM_TypeDef ∗TIMx, FunctionalState NewState)

  Enables or Disables the TIMx Update event.
- void TIM_UpdateRequestConfig (TIM_TypeDef ∗TIMx, uint16_t TIM_UpdateSource)

  Configures the TIMx Update Request Interrupt source.
- void TIM_ARRPreloadConfig (TIM_TypeDef ∗TIMx, FunctionalState NewState)

  Enables or disables TIMx peripheral Preload register on ARR.
- void TIM_SelectOnePulseMode (TIM_TypeDef ∗TIMx, uint16_t TIM_OPMode)

  Selects the TIMx's One Pulse Mode.
- void TIM_SetClockDivision (TIM_TypeDef ∗TIMx, uint16_t TIM_CKD)

  Sets the TIMx Clock Division value.
- void TIM_Cmd (TIM_TypeDef ∗TIMx, FunctionalState NewState)

  Enables or disables the specified TIM peripheral.
- void TIM_OC1Init (TIM_TypeDef ∗TIMx, TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Initializes the TIMx Channel1 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC2Init (TIM_TypeDef ∗TIMx, TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Initializes the TIMx Channel2 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC3Init (TIM_TypeDef ∗TIMx, TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Initializes the TIMx Channel3 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OC4Init (TIM_TypeDef ∗TIMx, TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Initializes the TIMx Channel4 according to the specified parameters in the TIM_OCInitStruct.
- void TIM_OCStructInit (TIM_OCInitTypeDef ∗TIM_OCInitStruct)

  Fills each TIM_OCInitStruct member with its default value.

- void TIM_SelectOCxM (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_OCMode)

  Selects the TIM Output Compare Mode.
- void TIM_SetCompare1 (TIM_TypeDef *TIMx, uint32_t Compare1)

  Sets the TIMx Capture Compare1 Register value.
- void TIM_SetCompare2 (TIM_TypeDef *TIMx, uint32_t Compare2)

  Sets the TIMx Capture Compare2 Register value.
- void TIM_SetCompare3 (TIM_TypeDef *TIMx, uint32_t Compare3)

  Sets the TIMx Capture Compare3 Register value.
- void TIM_SetCompare4 (TIM_TypeDef *TIMx, uint32_t Compare4)

  Sets the TIMx Capture Compare4 Register value.
- void TIM_ForcedOC1Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 1 waveform to active or inactive level.
- void TIM_ForcedOC2Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 2 waveform to active or inactive level.
- void TIM_ForcedOC3Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 3 waveform to active or inactive level.
- void TIM_ForcedOC4Config (TIM_TypeDef *TIMx, uint16_t TIM_ForcedAction)

  Forces the TIMx output 4 waveform to active or inactive level.
- void TIM_OC1PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR1.
- void TIM_OC2PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR2.
- void TIM_OC3PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR3.
- void TIM_OC4PreloadConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPreload)

  Enables or disables the TIMx peripheral Preload register on CCR4.
- void TIM_OC1FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 1 Fast feature.
- void TIM_OC2FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 2 Fast feature.
- void TIM_OC3FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 3 Fast feature.
- void TIM_OC4FastConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCFast)

  Configures the TIMx Output Compare 4 Fast feature.
- void TIM_ClearOC1Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF1 signal on an external event.
- void TIM_ClearOC2Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF2 signal on an external event.
- void TIM_ClearOC3Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF3 signal on an external event.
- void TIM_ClearOC4Ref (TIM_TypeDef *TIMx, uint16_t TIM_OCClear)

  Clears or safeguards the OCREF4 signal on an external event.
- void TIM_OC1PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 1 polarity.
- void TIM_OC1NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 1N polarity.
- void TIM_OC2PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 2 polarity.
- void TIM_OC2NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 2N polarity.
- void TIM_OC3PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

Configures the TIMx channel 3 polarity.

- void TIM_OC3NPolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCNPolarity)

  Configures the TIMx Channel 3N polarity.
- void TIM_OC4PolarityConfig (TIM_TypeDef *TIMx, uint16_t TIM_OCPolarity)

  Configures the TIMx channel 4 polarity.
- void TIM_CCxCmd (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_CCx)

  Enables or disables the TIM Capture Compare Channel x.
- void TIM_CCxNCmd (TIM_TypeDef *TIMx, uint16_t TIM_Channel, uint16_t TIM_CCxN)

  Enables or disables the TIM Capture Compare Channel xN.
- void TIM_ICInit (TIM_TypeDef *TIMx, TIM_ICInitTypeDef *TIM_ICInitStruct)

  Initializes the TIM peripheral according to the specified parameters in the TIM_ICInitStruct.
- void TIM_ICStructInit (TIM_ICInitTypeDef *TIM_ICInitStruct)

  Fills each TIM_ICInitStruct member with its default value.
- void TIM_PWMIConfig (TIM_TypeDef *TIMx, TIM_ICInitTypeDef *TIM_ICInitStruct)

  Configures the TIM peripheral according to the specified parameters in the TIM_ICInitStruct to measure an external PWM signal.
- uint32_t TIM_GetCapture1 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 1 value.
- uint32_t TIM_GetCapture2 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 2 value.
- uint32_t TIM_GetCapture3 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 3 value.
- uint32_t TIM_GetCapture4 (TIM_TypeDef *TIMx)

  Gets the TIMx Input Capture 4 value.
- void TIM_SetIC1Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 1 prescaler.
- void TIM_SetIC2Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 2 prescaler.
- void TIM_SetIC3Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 3 prescaler.
- void TIM_SetIC4Prescaler (TIM_TypeDef *TIMx, uint16_t TIM_ICPSC)

  Sets the TIMx Input Capture 4 prescaler.
- void TIM_BDTRConfig (TIM_TypeDef *TIMx, TIM_BDTRInitTypeDef *TIM_BDTRInitStruct)

  Configures the Break feature, dead time, Lock level, OSSI/OSSR State and the AOE(automatic output enable).
- void TIM_BDTRStructInit (TIM_BDTRInitTypeDef *TIM_BDTRInitStruct)

  Fills each TIM_BDTRInitStruct member with its default value.
- void TIM_CtrlPWMOutputs (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables the TIM peripheral Main Outputs.
- void TIM_SelectCOM (TIM_TypeDef *TIMx, FunctionalState NewState)

  Selects the TIM peripheral Commutation event.
- void TIM_CCPreloadControl (TIM_TypeDef *TIMx, FunctionalState NewState)

  Sets or Resets the TIM peripheral Capture Compare Preload Control bit.
- void TIM_ITConfig (TIM_TypeDef *TIMx, uint16_t TIM_IT, FunctionalState NewState)

  Enables or disables the specified TIM interrupts.
- void TIM_GenerateEvent (TIM_TypeDef *TIMx, uint16_t TIM_EventSource)

  Configures the TIMx event to be generate by software.
- FlagStatus TIM_GetFlagStatus (TIM_TypeDef *TIMx, uint16_t TIM_FLAG)

  Checks whether the specified TIM flag is set or not.
- void TIM_ClearFlag (TIM_TypeDef *TIMx, uint16_t TIM_FLAG)

  Clears the TIMx's pending flags.
- ITStatus TIM_GetITStatus (TIM_TypeDef *TIMx, uint16_t TIM_IT)

Checks whether the TIM interrupt has occurred or not.

- void TIM_ClearITPendingBit (TIM_TypeDef *TIMx, uint16_t TIM_IT)

  Clears the TIMx's interrupt pending bits.
- void TIM_DMAConfig (TIM_TypeDef *TIMx, uint16_t TIM_DMABase, uint16_t TIM_DMABurstLength)

  Configures the TIMx's DMA interface.
- void TIM_DMACmd (TIM_TypeDef *TIMx, uint16_t TIM_DMASource, FunctionalState NewState)

  Enables or disables the TIMx's DMA Requests.
- void TIM_SelectCCDMA (TIM_TypeDef *TIMx, FunctionalState NewState)

  Selects the TIMx peripheral Capture Compare DMA source.
- void TIM_InternalClockConfig (TIM_TypeDef *TIMx)

  Configures the TIMx internal Clock.
- void TIM_ITRxExternalClockConfig (TIM_TypeDef *TIMx, uint16_t TIM_InputTriggerSource)

  Configures the TIMx Internal Trigger as External Clock.
- void TIM_TIxExternalClockConfig (TIM_TypeDef *TIMx, uint16_t TIM_TIxExternalCLKSource, uint16_t TIM_ICPolarity, uint16_t ICFilter)

  Configures the TIMx Trigger as External Clock.
- void TIM_ETRClockMode1Config (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the External clock Mode1.
- void TIM_ETRClockMode2Config (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the External clock Mode2.
- void TIM_SelectInputTrigger (TIM_TypeDef *TIMx, uint16_t TIM_InputTriggerSource)

  Selects the Input Trigger source.
- void TIM_SelectOutputTrigger (TIM_TypeDef *TIMx, uint16_t TIM_TRGOSource)

  Selects the TIMx Trigger Output Mode.
- void TIM_SelectSlaveMode (TIM_TypeDef *TIMx, uint16_t TIM_SlaveMode)

  Selects the TIMx Slave Mode.
- void TIM_SelectMasterSlaveMode (TIM_TypeDef *TIMx, uint16_t TIM_MasterSlaveMode)

  Sets or Resets the TIMx Master/Slave Mode.
- void TIM_ETRConfig (TIM_TypeDef *TIMx, uint16_t TIM_ExtTRGPrescaler, uint16_t TIM_ExtTRGPolarity, uint16_t ExtTRGFilter)

  Configures the TIMx External Trigger (ETR).
- void TIM_EncoderInterfaceConfig (TIM_TypeDef *TIMx, uint16_t TIM_EncoderMode, uint16_t TIM_IC1Polarity, uint16_t TIM_IC2Polarity)

  Configures the TIMx Encoder Interface.
- void TIM_SelectHallSensor (TIM_TypeDef *TIMx, FunctionalState NewState)

  Enables or disables the TIMx's Hall sensor interface.
- void TIM_RemapConfig (TIM_TypeDef *TIMx, uint16_t TIM_Remap)

  Configures the TIM2, TIM5 and TIM11 Remapping input capabilities.

7.45.1 Detailed Description

This file provides firmware functions to manage the following functionalities of the TIM peripheral:

Author

MCD Application Team

Version

V1.0.0

Date

30-September-2011

- TimeBase management
- Output Compare management
- Input Capture management
- Advanced-control timers (TIM1 and TIM8) specific features

- Interrupts, DMA and flags management
- Clocks management
- Synchronization management
- Specific interface management
- Specific remapping management

```
*
*          ===================================================================
*                              How to use this driver
*          ===================================================================
*          This driver provides functions to configure and program the TIM
*          of all STM32F4xx devices.
*          These functions are split in 9 groups:
*
*          1. TIM TimeBase management: this group includes all needed functions
*             to configure the TM Timebase unit:
*                   - Set/Get Prescaler
*                   - Set/Get Autoreload
*                   - Counter modes configuration
*                   - Set Clock division
*                   - Select the One Pulse mode
*                   - Update Request Configuration
*                   - Update Disable Configuration
*                   - Auto-Preload Configuration
*                   - Enable/Disable the counter
*
*          2. TIM Output Compare management: this group includes all needed
*             functions to configure the Capture/Compare unit used in Output
*             compare mode:
*                   - Configure each channel, independently, in Output Compare mode
*                   - Select the output compare modes
*                   - Select the Polarities of each channel
*                   - Set/Get the Capture/Compare register values
*                   - Select the Output Compare Fast mode
*                   - Select the Output Compare Forced mode
*                   - Output Compare-Preload Configuration
*                   - Clear Output Compare Reference
*                   - Select the OCREF Clear signal
*                   - Enable/Disable the Capture/Compare Channels
*
*          3. TIM Input Capture management: this group includes all needed
*             functions to configure the Capture/Compare unit used in
*             Input Capture mode:
*                   - Configure each channel in input capture mode
*                   - Configure Channel1/2 in PWM Input mode
*                   - Set the Input Capture Prescaler
*                   - Get the Capture/Compare values
*
*          4. Advanced-control timers (TIM1 and TIM8) specific features
*                   - Configures the Break input, dead time, Lock level, the OSSI,
*                     the OSSR State and the AOE(automatic output enable)
```

```
*                   - Enable/Disable the TIM peripheral Main Outputs
*                   - Select the Commutation event
*                   - Set/Reset the Capture Compare Preload Control bit
*
*          5. TIM interrupts, DMA and flags management
*                   - Enable/Disable interrupt sources
*                   - Get flags status
*                   - Clear flags/ Pending bits
*                   - Enable/Disable DMA requests
*                   - Configure DMA burst mode
*                   - Select CaptureCompare DMA request
*
*          6. TIM clocks management: this group includes all needed functions
*             to configure the clock controller unit:
*                   - Select internal/External clock
*                   - Select the external clock mode: ETR(Mode1/Mode2), TIx or ITRx
*
*          7. TIM synchronization management: this group includes all needed
*             functions to configure the Synchronization unit:
*                   - Select Input Trigger
*                   - Select Output Trigger
*                   - Select Master Slave Mode
*                   - ETR Configuration when used as external trigger
*
*          8. TIM specific interface management, this group includes all
*             needed functions to use the specific TIM interface:
*                   - Encoder Interface Configuration
*                   - Select Hall Sensor
*
*          9. TIM specific remapping management includes the Remapping
*             configuration of specific timers
*
*
```

Attention

7.46 CUBE_IDE/VGA/Core/Src/system_stm32f4xx.c File Reference

CMSIS Cortex-M4 Device Peripheral Access Layer System Source File. This file contains the system clock configuration for STM32F4xx devices, and is generated by the clock configuration tool stm32f4xx_Clock_Configuration↩_V1.0.0.xls.

```
#include "stm32f4xx.h"
```

Macros

- #define VECT_TAB_OFFSET 0x00
- #define **PLL_M** 8
- #define **PLL_N** 336
- #define **PLL_P** 2
- #define **PLL_Q** 7

Functions

- void SystemInit (void)

  Setup the microcontroller system Initialize the Embedded Flash Interface, the PLL and update the SystemFrequency variable.
- void SystemCoreClockUpdate (void)

  Update SystemCoreClock variable according to Clock Register Values. The SystemCoreClock variable contains the core clock (HCLK), it can be used by the user application to setup the SysTick timer or configure other parameters.

Variables

- uint32_t SystemCoreClock = 168000000
- __I uint8_t **AHBPrescTable** [16] = {0, 0, 0, 0, 0, 0, 0, 0, 1, 2, 3, 4, 6, 7, 8, 9}

7.46.1 Detailed Description

CMSIS Cortex-M4 Device Peripheral Access Layer System Source File. This file contains the system clock configuration for STM32F4xx devices, and is generated by the clock configuration tool stm32f4xx_Clock_Configuration↩_V1.0.0.xls.

Author

MCD Application Team

Version

V1.0.0

Date

19-September-2011

1. This file provides two functions and one global variable to be called from user application:
   - SystemInit(): Setups the system clock (System clock source, PLL Multiplier and Divider factors, AHB/↩APBx prescalers and Flash settings), depending on the configuration made in the clock xls tool. This function is called at startup just after reset and before branch to main program. This call is made inside the "startup_stm32f4xx.s" file.
   - SystemCoreClock variable: Contains the core clock (HCLK), it can be used by the user application to setup the SysTick timer or configure other parameters.
   - SystemCoreClockUpdate(): Updates the variable SystemCoreClock and must be called whenever the core clock is changed during program execution.
2. After each device reset the HSI (16 MHz) is used as system clock source. Then SystemInit() function is called, in "startup_stm32f4xx.s" file, to configure the system clock before to branch to main program.
3. If the system clock source selected by user fails to startup, the SystemInit() function will do nothing and HSI still used as system clock source. User can add some code to deal with this issue inside the SetSysClock() function.
4. The default value of HSE crystal is set to 8 MHz, refer to "HSE_VALUE" define in "stm32f4xx.h" file. When HSE is used as system clock source, directly or through PLL, and you are using different crystal you have to adapt the HSE value to your own configuration.

7.46.2 5. This file configures the system clock as follows:

==========

7.46.2.1 Supported STM32F4xx device revision | Rev A

7.46.2.2 System Clock source | PLL (HSE)

7.46.2.3 SYSCLK(Hz) | 168000000

7.46.2.4 HCLK(Hz) | 168000000

7.46.2.5 AHB Prescaler | 1

7.46.2.6 APB1 Prescaler | 4

7.46.2.7 APB2 Prescaler | 2

7.46.2.8 HSE Frequency(Hz) | 8000000

7.46.2.9 PLL_M | 8

7.46.2.10 PLL_N | 336

7.46.2.11 PLL_P | 2

7.46.2.12 PLL_Q | 7

7.46.2.13 PLLI2S_N | NA

7.46.2.14 PLLI2S_R | NA

7.46.2.15 I2S input clock | NA

7.46.2.16 VDD(V) | 3.3

7.46.2.17 High Performance mode | Enabled

7.46.2.18 Flash Latency(WS) | 5

7.46.2.19 Prefetch Buffer | OFF

7.46.2.20 Instruction cache | ON

7.46.2.21 Data cache | ON

Require 48MHz for USB OTG FS, | Enabled

7.46.2.22 SDIO and RNG clock |

==========

THE PRESENT FIRMWARE WHICH IS FOR GUIDANCE ONLY AIMS AT PROVIDING CUSTOMERS WITH CODING INFORMATION REGARDING THEIR PRODUCTS IN ORDER FOR THEM TO SAVE TIME. AS A RESULT, STMICROELECTRONICS SHALL NOT BE HELD LIABLE FOR ANY DIRECT, INDIRECT OR CONSEQUENTIAL DAMAGES WITH RESPECT TO ANY CLAIMS ARISING FROM THE CONTENT OF SUCH FIRMWARE AND/OR THE USE MADE BY CUSTOMERS OF THE CODING INFORMATION CONTAINED HEREIN IN CONNECTION WITH THEIR PRODUCTS.

7.47 CUBE_IDE/VGA/Core/Src/UART_communication.c File Reference

In this file UART is used to make communication possible between the STM32F4 board and a computer. With this code messages can be received and sent. This code is made with the assistance of an online guide from 'Controllerstech'.

```
#include "UART_communication.h"
```

Functions

- void UART2_config (void)

  Function to enable all the necessary registers and operations to use UART.
- void UART_sendChar (uint8_t c)

  Function that sends char data to the connected terminal.
- void UART_sendString (char ∗string)

  Function that sends a string to the connected terminal.
- uint8_t UART_getChar (void)

  Function that receives data from the connected terminal.
- UART UART_receiver (void)

  Function that read a single line and stores the data.
- void UART_errorHandling (int err)

  Function that handles the occuring errors to the terminal.

7.47.1 Detailed Description

In this file UART is used to make communication possible between the STM32F4 board and a computer. With this code messages can be received and sent. This code is made with the assistance of an online guide from 'Controllerstech'.

1.1

7.47.2 Function Documentation

7.47.2.1 UART2_config()

```
void UART2_config (
             void  )
```

Function to enable all the necessary registers and operations to use UART.

Parameters

Nothing	

Returns

Nothing

7.47.2.2 UART_errorHandling()

```
void UART_errorHandling (
             int err )
```

Function that handles the occuring errors to the terminal.

Parameters

err	error that is supposed to be shown

Returns

nothing

7.47.2.3 UART_getChar()

```
uint8_t UART_getChar (
            void  )
```

Function that receives data from the connected terminal.

Parameters

Nothing	

Returns

Received data

7.47.2.4 UART_receiver()

```
UART UART_receiver (
            void  )
```

Function that read a single line and stores the data.

Parameters

Nothing	

Returns

struct variable

7.47.2.5 UART_sendChar()

```
void UART_sendChar (
            uint8_t c )
```

Function that sends char data to the connected terminal.

Parameters

Char	data do be send

Returns

Nothing

7.47.2.6 UART_sendString()

```
void UART_sendString (
            char * string )
```

Function that sends a string to the connected terminal.

Parameters

String	do be send

Returns

Nothing
